PREFACE.

The Canada Year Book had its beginning in the first year of the Dominion when the semi-official "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, and West Indies"—was founded. Subsequently the title was changed to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America". It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade, and general conditions of the Dominion. The work was prepared in the General Statistical Office of the Department of Agriculture and was continued annually until 1904 under the direction of Dr. George Johnson, F.S.S. To use Dr. Johnson's words, the main feature of the Statistical Abstract was "the collection into one book of the information of various kinds scattered through the blue books issued by the several Departments". He goes on to say, "This book has become the *rade mecum* of public men . . . in Canada as well as in all other civilized countries". In 1905, the General Statistical Office was amalgamated with the Census Office. The Year Book was remodelled by Dr. Archibald Blue, Chief Officer, and continued as "The Canada Year Book, Second Series".

In the re-organization of statistics which followed the report of the Royal Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book was made a primary object and this progress has been continued down to the present time.

With the growth of the administrative functions of government and the consequent increase in the content and variety of the statistical data made available, it is becoming difficult to keep the size of the Year Book within convenient limits and the policy has been adopted of replacing material which is unchanged from year to year by adequate references to earlier editions, but every care is taken to keep the framework intact and well balanced. Some of the space thus saved is given to necessary revisions, additions, important new material, and special features, among the chief of which in the current edition are the following: In Chapter I, which treats of Physiography, a revised article on the Geology of Canada appears at pp. 16-27; Part III—Seismology—last published in the 1931 Year Book is brought up to date this year; and a special article, "The Flora of Canada", prepared by John Adams, M.A. (Cantab.), Division of Botany, Experimental Farm, Ottawa, appears at pp. 30-59 as Part IV. In Part VII, which deals with Climate and Meteorology, a new section and tables on Times of Sunrise and Sunset in Canada are given.

At pp. 78-90, an additional Part on Historic Sites and Monuments in Canada is added to Chapter II. A section on the Government of Canada's Arctic Territory has been added to Chapter III at pp. 92-93, and at pp. 110 to 119 the provincial legislatures from 1924 to the present are tabulated, tying-in with the series from Confederation to 1923 published in the 1924 Year Book.

A special feature of Chapter VIII—Agriculture—this year is the article appearing at pp. 223-230 dealing with the Prairie Farm Rehabilitation Program inaugurated

by the Dominion Government to alleviate the conditions brought about by the incidence of the recent agricultural crisis in the West, and to provide for permanent improvements in areas suffering from drought and soil-drifting.

All the space that could be spared in Chapter XIX—Labour and Wages—has been given to a summary review of Labour Legislation in Canada, which appears at pp. 787-796, and to an extended treatment of Mothers' Allowances by individual provinces.

In addition to the special features mentioned, some progress has been made in filling in the new framework of Chapter XVIII—Transportation and Communications—as it was recast last year, but unfortunately certain of the statistical series are not yet complete. The section of Chapter XXI—Public Finance—which deals with Capital Investments in Canada and Canadian Investments Abroad, has been completely revised and a new series of historical statistics on a comparable basis, which entirely replaces all earlier figures, is now presented for the years 1926 to 1935 at pp. 896-899. In Chapter XXIII—Currency and Banking—the tables concerning Loan and Trust Companies have been recast, statistics regarding Small Loans Companies separated therefrom, and a separate section on Small Loans Companies added: the business of these companies has now reached considerable proportions and, in view of the special legislation governing their incorporation and operation, this separation is desirable. The review of life insurance given in Chapter XXIII has been rounded out by the inclusion of text and tables covering the business of Canadian companies abroad and Chapter XXV—Education—has been recast, both in regard to textual treatment and tabular presentations.

The list of special articles appearing in past editions from 1922 to 1937 will be found at p. vi, immediately preceding the Map of Canada.

In addition to the above-noted features, all parts of the volume have been carefully revised and brought up to date by the most competent authorities; the latest information appearing to the date of going to press is included.

In the absence of the Editor, S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R.Econ. Soc., (seconded to the Government of Palestine), the present volume has been edited by A. E. Millward, B.A., B.Com., assisted by W. H. Lancelley, and R. F. Clarke, M.C., D.L.S., of the editorial staff of the General Statistics Branch of the Bureau. Charts, graphs and layouts except as otherwise credited have been made by, or under the supervision of, J. W. Delisle, Senior Draughtsman of the Dominion Bureau of Statistics.

Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and other individuals, who have assisted in the collection of information. Credit is apportioned to the various persons and services concerned by means of footnotes to those chapters and sections that have been contributed, or in the compilation of which co-operation has been received.

While every care has been taken in preparation, there are doubtless imperfections and, with a view to the improvements of future editions, the Dominion Statistician will be glad to hear of any errors that may have escaped notice, and to receive suggestions with regard to omissions or to method of treatment.

R. H. COATS,
Dominion Statistician.

SYNOPSIS.

CHAPTER I.—PHYSIOGRAPHY.

	Page.
Part I.—Geographical Features.....	1-16
1. Land and Fresh-Water Area of Canada, by Provinces and Territories, 1937.....	7
Section 1. <i>Geography</i>	8-10
2. Mountain Peaks over 14,000 Feet in Elevation, with Latitude and Longitude.....	9-2
Section 2. <i>Lakes and Rivers</i>	11-15
3. Areas, Elevations, and Depths of the Great Lakes.....	11
4. Areas and Elevations of Principal Canadian Lakes, by Provinces.....	12-13
5. Drainage Basins in Canada.....	14
6. Lengths of Principal Rivers and Tributaries in Canada.....	15
Section 3. <i>Islands</i>	16
Part II.—Geology.....	16-27
Section 1. <i>Geology of Canada</i>	16-27
Section 2. <i>Economic Geology</i>	27
Part III.—Seismology in Canada.....	27-30
Part IV.—The Flora of Canada.....	30-39
Section 1. <i>Phanerogams</i>	27-51
Section 2. <i>Cryptogams</i>	51-56
Part V.—Faunas of Canada.....	59
Part VI.—Lands, Scenic, and Game Resources of Canada.....	59-65
1. Land Area of Canada, Classified as Agricultural, Forested, or Unproductive.....	60
2. Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1937.....	62-64
Part VII.—Climate and Meteorology.....	65-68
Section 1. <i>The Climate of Canada</i>	65
Section 2. <i>The Factors which Control Canadian Weather</i>	65
Section 3. <i>The Distribution of Precipitation in Canada</i>	65
Section 4. <i>The Temperature and Precipitation of Northern Canada</i>	65
Section 5. <i>The Meteorological Service of Canada</i>	66
Section 6. <i>Meteorological Tables</i>	66-68
Section 7. <i>Droughts in Western Canada</i>	68
Section 8. <i>Standard Time and Time Zones in Canada</i>	68

CHAPTER II.—HISTORY AND CHRONOLOGY.

Part I.—History.....	69
Part II.—Chronology, 1497 to 1938.....	69-77
Part III.—Historic Sites and Monuments in Canada.....	75-90

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

Part I.—Constitution and General Government.....	91
Part II.—Provincial and Local Government.....	91-93
Section 1. <i>The Government of Canada's Arctic Territory</i>	92-93
Part III.—Legislative and Executive Authorities.....	93-119
Section 1. <i>Dominion Parliament and Ministry</i>	93-103
Subsection 1. <i>The Governor General of Canada</i>	93-94
1. <i>Governors General of Canada, 1867-1938</i>	94
Subsection 2. <i>The Ministry</i>	94-98
2. <i>Ministers since Confederation and Members of the Sixteenth Ministry</i>	96
3. <i>Members of the King's Privy Council for the Dominion of Canada, according to Seniority therein, as at Mar. 1, 1938</i>	96
4. <i>Duration and Sessions of Dominion Parliaments, 1867-1938</i>	97-98
Subsection 3. <i>The Senate</i>	98-101
5. <i>Growth of Representation in the Senate, 1867-1938</i>	100
6. <i>Representation in the Senate of Canada, by Provinces, as at Mar. 15, 1938</i>	100-101
Subsection 4. <i>The House of Commons</i>	101-103
7. <i>Representation in the House of Commons as at Dominion General Elections 1867-1935</i>	102
8. <i>Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Eighteenth General Election, Oct. 14, 1935</i>	103-108
Subsection 5. <i>The Dominion Franchise</i>	108
9. <i>Number of Voters and Votes Polled at the General Elections of 1925, 1930, 1935, and 1935</i>	108
Section 2. <i>Provincial Governments</i>	109-119
10. <i>Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation, and Legislative Process by which Admission was Effectuated</i>	109
11. <i>Lieutenant-Governors of Provinces, 1867-1937, Legislatures and Ministers, 1924 to the Present</i>	110-119

CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.		PAGE.
Part IV.—Representatives in Other Countries.....		119-122
Section 1.	<i>Representatives within the Empire</i>	119-120
Section 2.	<i>Diplomatic Representation Abroad</i>	120-122
Section 3.	<i>Diplomatic Representation in Canada</i>	122
Part V.—Canada and the League of Nations.....		122-124

CHAPTER IV.—POPULATION.

Section 1.	<i>General Statistics of General Population</i>	125-133
1.	Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1931.....	126
2.	Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1931.....	126
3.	Population of Canada, by Provinces and Territories, in 1871 and 1931, Numerical Increase in each Decade from 1871 to 1931 and Total Increase.....	127
4.	Population of Canada, by Provinces and Territories, in 1871, and Increase Per Cent, by Decades, from 1871 to 1931.....	127
5.	Area and Density of Population of Canada, by Provinces, 1901-31.....	131
6.	Densities of Population in Various Countries in Recent Years.....	132
7.	Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Interdecennial Periods 1901-11, 1911-21, and 1921-31.....	133
Section 2.	<i>Sex Distribution</i>	133-135
8.	Sex Distribution of the People of Canada, by Provinces, 1871-1931.....	134
9.	Sexual Ratio of the Population of Various Countries in Recent Years.....	135
Section 3.	<i>Conjugal Condition</i>	135
10.	Conjugal Condition of the Population, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921, and 1931.....	135
Section 4.	<i>Age Distribution</i>	136
11.	Proportion per 1,000 of the Population by Age Periods, 1871, 1881, 1891, 1901, 1911, 1921, and 1931.....	136
12.	Proportion per 1,000 of the Population by Age Periods, by Provinces, 1931, with Totals for 1921.....	136
Section 5.	<i>Racial Origins</i>	137-138
13.	Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921, and 1931.....	138
Section 6.	<i>Religious</i>	138-140
14.	Religions of the People at each Decennial Census, 1871-1931.....	139-140
Section 7.	<i>Birthplaces</i>	140-141
15.	Birthplaces of the Population of Canada, by Numbers and Percentages, According to the Censuses of 1871-1931.....	141
Section 8.	<i>Citizenship and Naturalization</i>	141-143
16.	Citizenship of Native-Born, other British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Allegiance.....	142
Section 9.	<i>Language Spoken and Mother Tongue</i>	143
Section 10.	<i>Rural and Urban Population</i>	143-151
17.	Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1901-1931 and Numerical Increases 1921-31.....	145
18.	Urban Populations, Classified by Size of Municipality Groups, 1911, 1921, and 1931.....	146
19.	Populations of Cities and Towns having over 5,000 Inhabitants, Decennial Censuses 1871-1931, and the Quinquennial Census of 1936.....	146-148
20.	Populations of Towns and Villages having between 1,000 and 5,000 Inhabitants, Decennial Censuses 1901-31 and the Quinquennial Census of 1936.....	148-151
Section 11.	<i>Literacy</i>	151-152
21.	Literacy of the Population of 10 Years of Age or Over, by Provinces, 1931.....	152
Section 12.	<i>School Attendance</i>	152
Section 13.	<i>Blind and Deaf-Mutes</i>	152
22.	Deaf-Mutes, by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.....	152
Section 14.	<i>Dwellings and Family Households</i>	152
Section 15.	<i>Occupations of the Canadian People</i>	153
Section 16.	<i>Quinquennial Census of the Prairie Provinces</i>	153-154
23.	Rural and Urban Population of the Prairie Provinces, by Racial Origin, Birthplace and Sex, as at June 1, 1936.....	153-154
Section 17.	<i>Annual Estimates of Population</i>	154-155
24.	Estimates of the Population of Canada by Provinces, Interdecennial years, 1900-37.....	155
Section 18.	<i>Area and Population of the British Empire</i>	155
Section 19.	<i>Area and Population of the World</i>	155

CHAPTER V.—VITAL STATISTICS.

Section 1.	<i>Births</i>	155-168
1.	Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1934-36, with Averages for 1921-25, 1926-30, and 1931-35.....	159
2.	Live Births in Cities and Towns of 10,000 Population or Over, 1932-36, with Averages, 1920-31, and 1931-35.....	160-161
3.	Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1934-36.....	161
4.	Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1920-31.....	162
5.	Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1925, 1928-35.....	163

CHAPTER V.—VITAL STATISTICS—concluded.

Section 1. Births—concluded.	Page.
6. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specific Countries, 1935 and 1936.....	164
7. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1935 and 1936.....	165-166
8. Numbers of Illegitimate Births, Classified by Age of Mother, by Provinces, 1935, Percentages to Total Live Births, and Totals of Illegitimate Births, by Sex, 1934, 1935, and 1936, with Averages or Totals, 1926-36.....	166
9. Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1935, with Averages or Totals, 1926-36, and Ratios to Totals, 1934, 1935, and 1936.....	167
10. Crude Birth Rates of Various Countries of the World and of Provinces of Canada in Recent Years.....	167-168
Section 2. Marriages and Divorces.....	168-172
Subsection 1. Marriages.....	168-171
11. Differences in Ages of Bridegrooms and Brides, 1935.....	169
12. Average Ages of Parties Contracting Marriages, by Provinces, 1934 and 1935.....	169
13. Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1934, 1935, and 1936, with Averages for 1921-25, 1926-30, and 1931-35.....	170
14. Crude Marriage Rates of Various Countries of the World and of Provinces of Canada in Recent Years.....	171
Subsection 2. Divorces.....	171-172
15. Statistics of Divorces Granted in Canada, 1918-37.....	172
Section 3. Deaths.....	172-180
Subsection 1. General Mortality.....	172-181
16. Numerical and Percentage Distribution of Deaths in Canada by Sex and Age Groups, 1931-36.....	174
17. Quintile and Decile Ages of Decedents, by Sex, 1926, 1934, and 1935.....	174
18. Crude and Standardized Death Rates in Canada, by Provinces, 1929-36, with Averages, 1921-25, 1926-30, and 1931-35.....	176
19. Deaths in Canada, by Principal Causes, 1932-36.....	177
20. Death Rates per 100,000 Population in Canada, by Principal Causes, 1932-36.....	177
21. Deaths in Cities and Towns of 10,000 Population and Over, 1932-36, with Averages, 1926-30 and 1931-35.....	179-180
22. Crude Death Rates of Various Countries and of the Provinces of Canada in Recent Years.....	181
Subsection 2. Infantile and Maternal Mortality.....	181-189
23. Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-36, with Averages for 1921-25, 1926-30, and 1931-35.....	182
24. Infantile Mortality in Canada, by Principal Causes of Death, 1926, 1935-36.....	182-183
25. Proportion per 1,000 Deaths of Infants under One Year of Age Occurring at each Age Period, 1935-36.....	184
26. Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Cities and Towns of 10,000 and Over, 1934-36, with Averages, 1926-30 and 1931-35.....	185
27. Infantile Mortality per 1,000 Live Births in Various Countries of the World and Provinces of Canada in Recent Years.....	186
28. Infantile Mortality per 1,000 Live Births in Certain Cities of the World in 1935.....	187
29. Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1934-36, and Five-Year Averages for 1926-30 and 1931-35.....	187
30. Maternal Deaths in each Province, by Age Groups, 1936, with Totals and Rates per 1,000 Live Births for 1934-36 and Five-Year Averages for 1926-30 and 1931-35.....	188
31. Maternal Deaths in each Province, by Causes of Death, 1936.....	188-189
Section 4. Natural Increase.....	189-193
32. Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1934-36, with Averages 1921-25, 1926-30, and 1931-35.....	191
33. Natural Increase in Cities and Towns of 10,000 Population and Over, 1932-36, and Averages, 1926-30, and 1931-35.....	192-193
34. Births, Deaths, and Natural Increase in Canada, by Provinces and for each Sex, 1936, with Totals, 1931-36, and Averages 1926-30, and 1931-35.....	193

CHAPTER VI.—IMMIGRATION AND COLONIZATION.

Section 1. Statistics of Immigration.....	194-211
1. Numbers of Immigrant Arrivals in Canada, calendar years 1852-1937.....	195
2. Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar years 1908-37.....	196
3. Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, calendar years 1935 and 1936.....	196
4. Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, calendar years 1929-36.....	196
5. Racial Origins of Immigrants into Canada, calendar years, 1926-36.....	197-198
6. Languages of Immigrants Ten Years of Age or Over, calendar years 1931-35.....	198
7. Nationalities of Immigrants, calendar years 1931-36.....	199
8. Countries of Birth of Immigrants, calendar years 1931-36.....	200
9. Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years, 1931-36.....	201
10. Destinations of Immigrants into Canada, by Provinces, calendar years 1929-37.....	201
11. Immigrants Arriving in Canada, Classified by Occupation and Sex, According to Destination, calendar year 1936.....	202-203
12. Rejections of Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, calendar years 1931-36.....	206

CHAPTER VI.—IMMIGRATION AND COLONIZATION—concluded.

Section 1. <i>Statistics of Immigration</i> —concluded.	PAGE.
13. Deportations of Immigrants after Admission, by Principal Causes and by Nationalities, fiscal years ended, 1926-37, with Totals 1903-25 and 1903-37.....	205
14. British Juvenile Immigrants, fiscal years ended 1901-37.....	206
15. Record of Oriental Immigrants, fiscal years, 1923-36.....	206
15A. Record of Oriental Immigrants and Registrations for Leave of Chinese Immigrants, fiscal years ended Mar. 31, 1912-37, with Totals, 1888-1900 and 1901-11.....	207
17. Expenditures on Immigration in the fiscal years ended June 30, 1868-1906 and Mar. 31, 1907-37.....	209
18. Canadians Returned from the United States, calendar years 1924-37.....	210
19. Numbers of Passengers of British Nationality Changing Their Permanent Residence Between the United Kingdom and British North America, calendar years 1924-36.....	210
20. Returning Canadians and Other Non-Immigrants entering Canada via Ocean Ports, by Class of Travel, calendar years 1935 and 1936, with Totals for calendar years 1930-34.....	211
Section 2. <i>Colonization Activities</i>	211

CHAPTER VII.—SURVEY OF PRODUCTION.

Section 1. <i>The Leading Branches of Production in 1935</i>	214-217
1. Gross and Net Values of Production in Canada, by Industries, 1934 and 1935.....	215
2. Detailed Itemized Statement of the Net Values of Production in Canada during 1934 and 1935.....	216
Section 2. <i>The Provincial Distribution of Production</i>	217-218
2. Summary Analysis of the Value of Production in Canada, by Provinces, 1934 and 1935.....	217
Section 3. <i>Leading Branches of Production in Each Province, 1935</i>	218-222
4. Gross and Net Values of Production, Classified for each Province, by Industries, 1934.....	219-220
4A. Gross and Net Values of Production, Classified for each Province, by Industries, 1935.....	220-221
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production for each of the Provinces in 1934.....	221-222
5A. Percentage of the Value of the Net Production in each Industry to the Total Net Production for each of the Provinces in 1935.....	222

CHAPTER VIII.—AGRICULTURE.

Section 1. <i>The Government in Relation to Agriculture</i>	223-233
Subsection 1. The Prairie Farm Rehabilitation Program.....	223-230
Subsection 2. Provincial Departments of Agriculture.....	230-233
Subsection 3. Provincial Agricultural Colleges and Experimental Stations.....	233
Section 2. <i>Statistics of Agriculture</i>	233-250
Subsection 1. Value of Agricultural Production and of Farm Capital.....	235-238
1. Estimated Gross Value of Agricultural Production in Canada, Itemized by Provinces, 1932-36.....	235-237
2. Current Value of Farm Capital in Canada, by Provinces, 1935 and 1936.....	237
Subsection 2. Acreages, Yields, and Values of Field Crops.....	238-251
3. Acreages, Yields, and Values of Principal Crops Grown in Canada, 1928-37.....	238-239
4. Total Acreages and Values of Field Crops in Canada, by Provinces, 1932-37.....	239
5. Acreages, Yields, and Values of Principal Field Crops of Canada, Itemized by Provinces, 1930 and 1937.....	240-246
6. Estimated Acreages under Pasture in Canada, 1931-37.....	247
7. Provincial Lands under Grazing Leases, 1933-37.....	247
8. Annual Average Yields per Acre of Field Crops for Canada, 1930-37, with Long-Time Averages.....	248
9. Areas and Yields of Wheat, Oats, Barley, Rye, and Flaxseed in the Prairie Provinces, 1935-37.....	248
10. Stocks of Grain in Farmers' Hands on July 31, 1937, as Compared with July 31, 1930 and 1935, with Totals of Production of the Previous Years' Crops.....	249
11. Detailed Stocks of Grain in Canada on July 31, 1935, 1936, and 1937.....	249
12. Distribution of the Canadian Wheat Crops, by crop years, 1935-36 and 1936-37.....	250
13. Distribution of the Canadian Oat Crops, by crop years, 1935-36 and 1936-37.....	250
Subsection 3. Farm Live Stock and Poultry.....	251-255
14. Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931.....	251
15. Numbers and Values of Farm Live Stock in Canada, by Provinces, as at June 1, 1934-37.....	251-252
16. Average Values per Head of Farm Live Stock in Canada, as Estimated by Crop Correspondents, 1935-37.....	253
17. Numbers and Values of Farm Poultry in Canada, by Provinces, as at June 1, 1936 and 1937.....	253-254
18. Estimated Quantities and Values of Canadian Wool Clip, 1928-37.....	255
19. Annual Production of Farm Eggs in Canada, by Provinces, 1935-37.....	255
Subsection 4. <i>Dairying Statistics</i>	256-259
20. Dairy Production of Canada Expressed in Pounds of Milk, 1920-37, and by Provinces, 1937.....	256

CHAPTER VIII.—AGRICULTURE—concluded.

Section 2. <i>Statistics of Agriculture</i> —concluded.	PAGE.
Subsection 4. <i>Dairying Statistics</i> —concluded	
21. Production of Butter and Cheese in Canada, 1926-37, and by Provinces, 1937.....	257
22. Quantities and Values of Miscellaneous Products of Dairy Factories, 1935-37.....	258
23. Value of Dairy Production of Canada, 1926-37, and by Provinces, 1937.....	258-259
Subsection 5. <i>Horticulture</i>	259-261
24. Estimated Quantities and Values of Chief Commercial Fruit Production in Canada, 1935-36, with Five-Year Averages, 1926-30 and 1931-35.....	260
25. Numbers and Values of Fruit Trees, Bushes, and Plants, Sold by Nurserymen in Canada, years ended May 31, 1934-37.....	261
26. Quantities and Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold during the years ended May 31, 1936 and 1937.....	261
Subsection 6. <i>Special Agricultural Crops</i>	262-264
27. Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1935-37.....	262
28. Acreages, Yields, and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1927-36.....	262
29. Acreages and Yields of Tobacco in Canada, by Provinces, 1927-36.....	263
30. Acreages, Yields and Values of Flaxseed, Fibre, and Tow, in Canada, 1928-37....	263
31. Production and Value of Honey and Beeswax in Canada, by Provinces, 1935 and 1936.....	264
Subsection 7. <i>Farm Labour and Wages</i>	264-265
32. Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1935-37.....	265-266
Subsection 8. <i>Prices of Agricultural Produce</i>	266-270
33. Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Rye—basis, in store at Port William and Port Arthur—Aug., 1935-Dec., 1937, and Yearly Average Prices for crop years ended July 31, 1926-37.....	266-267
34. Monthly Average Prices of Flour, Bran, and Shorts at Principal Markets, 1937..	267
35. Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1936.....	268
36. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1937.....	268-269
37. Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1915-37.....	269-270
Subsection 9. <i>Agricultural Statistics of the Census</i>	270
Subsection 10. <i>Miscellaneous Agricultural Statistics</i>	270-273
38. Major Irrigation Projects in Southern Alberta, 1926 and 1936.....	271
39. Major Irrigation Projects in British Columbia, 1937.....	272-273
40. Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910 and 1919-37.....	273
Subsection 11. <i>International Agricultural Statistics</i>	273-280
41. Acreages and Yields of Cereals and Potatoes in Countries of the World, 1936 and 1937, with Five-Year Averages for 1931-35.....	274-278
42. Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1936 and 1937.....	279
43. Numbers of Live Stock in Principal Countries, circa 1935.....	279-280

CHAPTER IX.—FORESTRY.

Section 1. <i>Forest Regions</i>	281-284
Section 2. <i>Important Tree Species</i>	284
Section 3. <i>Forest Resources</i>	284-287
1. Estimate of Total Accessible Stand of Timber in Canada, Classified by Type and Merchantable Size, by Provinces and Regions, with Estimate of Grand Total Stand, 1937.....	287
Section 4. <i>Forest Administration</i>	287-294
Subsection 1. Administration of Dominion and Provincial Timber Lands.....	287-289
Subsection 2. Forest Fire Protection.....	289-291
Subsection 3. Scientific Forestry.....	291-294
Section 5. <i>Forest Utilization</i>	294-309
Subsection 1. <i>Woods Operations</i>	294-295
2. Values of Woods Operations, by Products, 1931-35.....	295
3. Quantities of Wood Cut in Operations in the Woods in Canada, Equivalents in Standing Timber, and Total Values, by Chief Products, 1935, with Comparative Totals, 1924-35.....	296
4. Equivalent Volumes of Standing Timber Cut in Canada and Values of Products of Woods Operations, by Provinces, 1934 and 1935.....	296
Subsection 2. <i>The Pulp and Paper Industry</i>	297-304
5. Production, Consumption, Exports, and Imports of Pulpwood, calendar years 1926-36.....	298
6. Pulp Production, Mechanical and Chemical, calendar years 1927-36.....	300
7. Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1926-36.....	300
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1935, and 1936.....	301
9. Summary of Paper Production in Canada, calendar years 1927-36.....	302
10. Production of Paper in Canada, by Provinces, 1936.....	302

CHAPTER X.—FORESTRY—concluded.

Section 5. Forest Utilization—concluded.	PAGE.
Subsection 2. The Pulp and Paper Industry—concluded.	
11. Estimated Quantities of Newsprint Produced in Leading Countries, 1935 and 1936, and the Ten-Year Average, 1927-36.....	303
12. Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1934, 1935, and 1936.....	303
Subsection 3. The Lumber Industry.....	305-307
13. Quantities and Values of Lumber, Shingles, and Lath Produced in Canada, calendar years 1920-36.....	305
14. Quantities and Values of Lumber and All Sawmill Products Made in Canada, by Provinces, 1935 and 1936.....	306
15. Canadian Exports of Planks, Boards, and Square Timber, by Countries, calendar years 1934-37.....	307
Subsection 4. Manufactures of Wood and Paper.....	307-308
Subsection 5. Forest Depletion and Increment.....	308-309

CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

Section 1. <i>The Fur Trade</i>	310-312
Section 2. <i>Fur Farming</i>	312-315
1. Numbers of Fur Farms, Values of Land and Buildings, and Values of Fur-Bearing Animals, by Provinces, 1934-36.....	313
2. Numbers of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1928-36.....	313
3. Values of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1928-36.....	314
4. Values of Fur-Bearing Animals Sold from Fur Farms in Canada, 1928-36.....	314
5. Values of Pelts Sold from Fur Farms in Canada, 1928-36.....	315
Section 3. <i>Statistics of Total Production and Trade in Furs</i>	315-318
6. Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1929-36.....	316
7. Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, by Provinces, years ended June 30, 1935 and 1936.....	316
8. Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1935 and 1936.....	317
9. Exports of Canadian Raw Furs by Leading Countries and Kinds of Fur, years ended June 30, 1932-36.....	318
10. Imports of Raw Furs by Leading Countries Whence Imported and Kinds of Fur, years ended June 30, 1932-36.....	318

CHAPTER XI.—THE FISHERIES.

Section 1. <i>The Early Fisheries</i>	319
Section 2. <i>The Canadian Fishing Grounds</i>	319
Section 3. <i>The Government and the Fisheries</i>	319-322
1. Government Bounties Paid to Fishermen for the calendar years 1933-36.....	321
Section 4. <i>The Modern Fishing Industry</i>	322-334
2. Total Values of the Products of the Fisheries of Canada, 1870-1936.....	323
3. Total Values of the Products of the Fisheries, by Provinces, calendar years 1931-36.....	323
4. Quantities and Values of the Chief Commercial Fishes, calendar years 1932-36.....	324
5. Value of the Fisheries Production of Canada in 1930 Compared with 1935, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.....	325
6. Quantities and Values of Sea Fish and Products Marketed, calendar years 1935 and 1936.....	326-328
7. Quantities and Values of Inland Fish Marketed, calendar years 1935 and 1936.....	328
8. Numbers of Fish-Canning and -Curing Establishments, by Provinces, 1935 and 1936.....	329
9. Values of Materials Used and of Products of Fish-Canning and -Curing Establishments, 1932-36.....	329
10. Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1935 and 1936.....	330
11. Numbers of Persons Employed in the Fisheries of Canada and in Processing Establishments Connected Therewith, 1934-36.....	331
12. Employees in Fish-Canning and -Curing Establishments, 1934-36.....	331
13. Employees and Salaries and Wages in Fish-Canning and -Curing Establishments, 1920-36.....	331
14. Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-37... ..	332
15. Exports of the Fisheries, the Produce of Canada, by Principal Countries, calendar years 1935 and 1936.....	333
16. Exports of the Fisheries of Canada, by Quantities and Values, calendar years 1934-36.....	333-334

	PAGE.
CHAPTER XII.—MINES AND MINERALS.	
Section 1. <i>Mineral Lands Administration and Mining Laws</i>	337-341
Subsection 1. Dominion Mining Laws and Regulations.....	337-338
Subsection 2. Provincial Mining Laws and Regulations.....	338-341
Section 2. <i>Summary of General Production</i>	342-351
Subsection 1. General Statistics of Mineral Production.....	343-347
1. Value of Mineral Production in Canada, calendar years 1880-1937.....	343
2. Mineral Production of Canada, calendar years 1935 and 1936.....	344-345
3. Value of the Mineral Production of Canada, in 1935, Compared with 1935, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.....	340-347
Subsection 2. Provincial Distribution of Mineral Production.....	348-351
4. Mineral Production of Canada, by Provinces, calendar years 1911-37.....	348
5. Detailed Mineral Production of Canada, by Provinces, calendar year 1936.....	349-351
Section 3. <i>Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in Principal Industries</i>	352-358
Subsection 1. Principal Factors in the Mineral Industries.....	353-354
Subsection 2. Growth of the Mining Industry in Recent Years.....	354-356
6. Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-36, and by Provinces, 1936.....	355-356
Subsection 3. The Principal Mineral Industries.....	356-358
7. Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1935 and 1936.....	357-358
Section 4. <i>Production of Metallic Minerals</i>	358-373
Subsection 1. Gold.....	358-363
8. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-37.....	360
9. Values of Gold Produced in Canada, by Provinces, calendar years 1911-37.....	361
10. Quantities and Values of World Production of Gold, 1891-1936.....	362
11. Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1935 and 1936.....	363
Subsection 2. Silver.....	364-366
12. Quantities and Values of Silver Produced in Canada, calendar years 1911-37.....	364
13. Quantities and Values of Silver Produced in Canada, by Provinces, calendar years 1911-37.....	365
14. Quantities and Values of World Production of Silver, with Annual Average Prices, 1890-1936.....	366
Subsection 3. Copper.....	366-368
15. Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-37.....	368
16. Copper Production of the Leading Countries and of the World, 1913-36.....	368
Subsection 4. Lead.....	369-370
17. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-37.....	369
Subsection 5. Nickel.....	370-371
18. Quantities and Values of Nickel Produced in Canada, calendar years 1911-37.....	370
Subsection 6. Cobalt.....	371
Subsection 7. Zinc.....	371-372
19. Quantities and Values of Zinc Produced in Canada, calendar years 1911-37.....	372
Subsection 8. Iron.....	372-373
20. Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-37.....	373
Section 5. <i>Production of Non-Metallic Minerals</i>	373-381
Subsection 1. Fuels.....	373-379
21. Production of Coal in Canada, by Provinces, calendar years 1911-37.....	374
22. Imports into Canada of Anthracite, Bituminous, and Lignite Coal for Home Consumption, calendar years 1911-36.....	375
23. Exports of Coal, the Produce of Canada, calendar years 1911-36.....	375
24. Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-36.....	376
25. Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1936.....	376
26. Coal Produced in the Principal Countries of the World, 1913, 1921-36.....	377
27. Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-37.....	378
28. Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-37.....	379
Subsection 2. Other Non-Metallic Minerals.....	379-381
29. Quantities and Values of Asbestos Produced in Canada, calendar years 1911-37.....	380
Section 6. <i>Production of Clay Products and Other Structural Materials</i>	381-383
30. Production, Imports, Exports, and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-37.....	382
31. Production of Sand and Gravel, and Stone in Canada, Showing the Principal Purposes, calendar years 1934-36.....	383

CHAPTER XIII.—WATER POWERS.

	PAGE
Section 1. <i>The Water Powers of Canada</i>	385-389
1. Available and Developed Water Power in Canada, by Provinces, Dec. 31, 1937..	386
2. Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1900-37.....	388
3. Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Dec. 31, 1937.....	389
Section 2. <i>Central Electric Stations</i>	389-392
4. Summary Statistics of Central Electric Stations, calendar years 1917-36.....	390
5. Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1936.....	391
6. Electric Energy Generated in Central Electric Stations, by Provinces, calendar years 1931-36.....	392
7. Electric Energy Exported under Authority of the Electricity and Fluid Exportation Act, calendar years 1934-37.....	392
Section 3. <i>Public Ownership of Hydro-Electric Power</i>	393-402
Subsection 1. The Hydro-Electric Power Commission of Ontario.....	393-399
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, fiscal years ended Oct. 31, 1910-36.....	394
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commission, fiscal years ended Oct. 31, 1932-36.....	395
10. Capital Investments in Ontario's Hydro Undertakings, fiscal years ended Oct. 31, 1932-36.....	395
11. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, fiscal years ended Oct. 31, 1932-36.....	396
12. Consolidated Statement of Assets, Liabilities, Reserves, and Surpluses of Electrical Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1932-36.....	397
13. Statement of Earnings and Expenses of Electrical Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1932-36.....	398
14. Statistics Relating to Electrical Service to Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1932-36.....	399
Subsection 2. Hydro-Electric and Power Commissions in Other Provinces.....	399-402

CHAPTER XIV.—MANUFACTURES.

Section 1. <i>The Evolution of Canadian Manufacturing Industries</i>	403-416
Subsection 1. Growth of Manufacturing in Canada since 1870.....	404-411
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1936.....	405
2. Summary Statistics of Manufactures, by Provinces, for Representative Years 1917-36.....	406-407
3. Summary Statistics of Manufactures, by Industrial Groups, for Representative Years 1917-36.....	407-409
4. Summary Statistics of Manufactures for Representative Years 1917-36.....	411
Subsection 2. Volume and Consumption of Manufactured Products.....	412-416
5. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1929, 1929, and 1932-35.....	413
6. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, 1929, 1929, and 1932-35.....	414
7. Consumption of Manufactured Products, by Groups, 1935, with Totals for 1929-35.....	416
Section 2. <i>Production of Industrial Groups and Individual Industries</i>	416-438
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Manufacturing Industries in the Seven-Year Period 1929-35.....	417
Subsection 1. Manufactures Grouped by Chief Component Materials.....	418-429
9. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1935.....	421-429
Subsection 2. Manufactures Classified by the Purpose of the Products.....	430-432
10. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-35 and in Detail for 1935.....	431-432
Subsection 3. Manufactures Classified by Origin of the Materials.....	433-435
11. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-35.....	434-435
Subsection 4. The Forty Leading Manufacturing Industries.....	436-438
12. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1935.....	437
12A. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1936.....	438
Section 3. <i>Provincial Distribution of Manufacturing Production</i>	439-446
Subsection 1. The Manufactures of the Maritime Provinces, 1935.....	439-440
13. Statistics of the Leading Industries of each of the Maritime Provinces, 1935.....	439-440
Subsection 2. The Manufactures of Quebec, 1935.....	440-441
14. Principal Statistics of the Leading Industries of the Province of Quebec, 1935.....	441
Subsection 3. The Manufactures of Ontario, 1935.....	442-443
15. Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1935.....	443

CHAPTER XIV.—MANUFACTURES—concluded.

Section 3. <i>Provincial Distribution of Manufacturing Production—concluded.</i>	PAGE.
Subsection 4. The Manufactures of the Prairie Provinces, 1935.....	443-445
16. Principal Statistics of the Leading Industries of Manitoba, Saskatchewan, and Alberta, 1935.....	444-445
Subsection 5. The Manufactures of British Columbia, 1935.....	445-446
17. Principal Statistics of the Leading Industries of British Columbia and the Yukon Territory, 1935.....	446
Section 4. <i>Principal Factors in Manufacturing Production</i>	446-467
Subsection 1. Capital Employed.....	446-448
18. Distribution of Capital Employed in the Manufacturing Industries of Canada, in Percentages, by Provinces and Industrial Groups, Representative Years 1917-35.....	447
19. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and by Groups of Industries, 1935, and Totals for Representative Years 1923-35.....	448
Subsection 2. Employment in Manufactures.....	448-454
20. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-35.....	450
21. Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1935.....	451
22. Total Numbers of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and by Sex, for Representative Years 1922-35.....	452
23. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment from 1922 to 1935 and in Detail, by Provinces, Groups, and the Forty Leading Industries, 1935.....	453-454
Subsection 3. Wages and Salaries in Canadian Manufacturing Industries.....	455-459
24. Employees on Salaries and Wages in Manufacturing Industries, 1935, by Sex, and Average Salaries and Wages, 1934 and 1935, by Provinces and Groups.....	455
25. Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1935, together with Comparative Figures of Average Salaries and Wages Paid in 1934, and Totals and Averages Paid in Representative Years, 1917-35.....	457
26. Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-35.....	458
27. Percentages of Wages and Salaries Paid to Total Net Values of Manufacturing Production, 1924-35.....	450
Subsection 4. Size of Manufacturing Establishments.....	459-464
28. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1934, and 1935.....	460
29. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1935.....	461
30. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1934, and 1935.....	462
31. Establishments and Employees in Canadian Manufactures, by Provinces, and Average Number of Employees per Establishment, 1935.....	462
32. Size of Establishments of some of the Leading Industries, Grouped According to the Gross Value of Products, and the Number of Persons Employed, 1935.....	463-464
Subsection 5. Power and Fuel.....	464-467
33. Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-35, with Details by Provinces and Industrial Groups for 1935.....	466
34. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1921-34, with Details by Provinces and Groups, 1935.....	467
Section 5. <i>Manufacturing Industries in Cities and Towns</i>	468-472
35. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1935.....	468
36. Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1930 and 1932-35.....	469
37. Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or More Establishments, 1935.....	400-472

CHAPTER XV.—CONSTRUCTION.

1. Principal Statistics of the Construction Industry in Canada, 1935 and 1936.....	476
2. Principal Statistics of the Construction Industry in Canada, by Provinces, 1936.....	476
3. Percentage Distribution of the Principal Statistics of the Construction Industry, by Provinces, 1936.....	477
4. Description, Classification, and Value of Construction in Canada, 1936.....	477
5. Average Monthly Employment of Wage-Earners and their Remuneration by Groups and Provinces, 1936.....	478
6. Summary of the Value of Construction Contracts Awarded in Canada, 1911-37, as Compiled by MacLean Building Reports, Ltd.....	479
7. Construction Contracts Awarded in Canada, 1932-37, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd.....	479-480
8. Values of Building Permits Taken Out in 58 Cities for the calendar years 1932-37.....	481-482
9. Values of Building Permits Issued by 35 Cities in the calendar years 1910-37 and Index Numbers of the Building Construction Industries.....	483

CHAPTER XVI.—EXTERNAL TRADE.

	PAGE.
Section 1. <i>The Development of Tariffs</i>	484-497
Subsection 1. Historical Sketch of External Trade and Tariffs.....	484-487
Subsection 2. Tariff Relationships with Other Countries.....	487-497
Section 2. <i>The Commercial Intelligence Service</i>	497-499
Canadian Government Trade Commissioners.....	497-499
Section 3. <i>Statistics of External Trade</i>	499-585
Subsection 1. Value and Quantum of World Trade.....	502-509
I. Price and Quantum Movements of Groups of Commodities in World Trade, 1923 and 1932-36.....	503
II. Percentage Distribution of World Trade by Continents, 1929, 1932, 1935, and 1936.....	504
III. Percentage Distribution of World Trade by Political Groups, 1929, 1932, 1935, and 1936.....	505
IV. Percentage, Price, and Quantum of Trade of Twenty-Two Leading Countries of the World, calendar years 1929, 1932, 1935, and 1936.....	508-509
Subsection 2. Historical Statistics of Canadian Trade.....	509-510
Subsection 3. General Analysis of Current Import and Export Trade.....	510-512
V. Summary of the Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1914, 1927, 1933, 1936, and 1937.....	511-512
Subsection 4. Trade with the United Kingdom and the British Empire.....	512-514
VI. Canada's Trade with the British Empire.....	514
Subsection 5. Trade with the United States and Other Foreign Countries.....	515-517
VII. Canada's Trade with the United States and Other Foreign Countries.....	516-517
Subsection 6. Geographical Distribution of Canadian Trade by Continents and Countries VIII. Canada's Trade by Continents, fiscal years 1932-37.....	517-519
IX. Percentages of Total Imports into Canada from Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1934-37.....	519
X. Percentages of Total Domestic Exports from Canada to Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1934-37.....	519
Subsection 7. Principal Commodities Imported and Exported.....	520-524
XI. Canada's Leading Imports, fiscal years 1890, 1900, 1910, 1920, 1930 and 1937.....	521-522
XII. Canada's Leading Domestic Exports, fiscal years 1890, 1900, 1910, 1920, 1930, and 1937.....	523-524
Subsection 8. Proportions of Trade in Raw and Manufactured Products.....	524-526
XIII. Canada's Imports and Exports, by Continents and Leading Countries, According to Degree of Manufacture, year ended Mar. 31, 1937.....	525-526
Subsection 9. Main Historical Tables and Tables showing Current Trends in External Trade.....	526-581
1. Aggregate External Trade of Canada, fiscal years 1868-1937.....	528
2. Ratio of Exports to Imports and Values per Capita of Exports, Imports, and Total Trade, fiscal years 1868-1937.....	529
3. Movement of Coin and Bullion, fiscal years 1868-1937.....	530
4. Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1898-1937, with Percentages of Expense of Collection to, Gross Customs Re- venue Collected, fiscal years 1898-1937.....	531
5. Exports to the United Kingdom, to the United States, and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868-1937.....	532
6. Imports from the United Kingdom, from the United States, and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868-1937.....	533
7. Percentage Proportions of Imports from the United Kingdom and the United States, respectively, to Totals of Dutiable and Free in the fiscal years 1911-37.....	534
8. Average <i>ad valorem</i> Rates of Duty Collected on Dutiable and Total Imports from United Kingdom, the United States, and All Countries, fiscal years 1868-1937.....	534
9. Imports for Home Consumption of Certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-37.....	535
10. Exports to the United Kingdom, to the United States, and to All Countries, of Classes of Merchandise the Produce of Canada, by Values and Percentages, fiscal years 1934-37.....	536
11. Imports from the United Kingdom, from the United States, and from All Countries, of Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1934-37.....	537
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States and All Countries, fiscal years 1934-37.....	538-549
13. Principal Imports into Canada for Consumption from United Kingdom, United States and All Countries, fiscal years 1934-37.....	550-569
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, and Totals of Duties Collected during the fiscal years ended Mar. 31, 1933-37.....	570-571
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1937.....	572-573
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1937.....	574
17. Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at certain Ports and by Provinces, fiscal years ended Mar. 31, 1936 and 1937.....	575-576
18. Imports of Canada, by Values Entered for Consumption from British Empire and Foreign Countries, Dutiable and Free, under the General, Preferential, and Treaty Rate Tariffs, fiscal year ended Mar. 31, 1937.....	577

CHAPTER XVI.—EXTERNAL TRADE—concluded.	PAGE.
Section 3. <i>Statistics of External Trade</i> —concluded.	
Subsection 9. <i>Main Historical Tables</i> —concluded.	
19. Values of Imports into Canada of Merchandise Entered for Consumption, from the British Empire and from Foreign Countries, fiscal years ended Mar. 31, 1933-37.....	575-579
20. Values of Exports of Canadian Produce, from Canada to the British Empire and to Foreign Countries, fiscal years ended Mar. 31, 1933-37.....	579-580
21. Values and Percentages of Canadian Imports and Exports, from and to Stated Countries, passing through the United States, fiscal years ended Mar. 31, 1936 and 1937.....	581
Subsection 10. Comparison of the Volume of Imports and Exports.....	582-585
22. Comparison of the Values and Volumes of the External Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1932-37.....	583-585
Section 4. <i>The Tourist Trade of Canada</i>	586-587
23. Estimated Tourist Expenditures in Canada and of Canadians Abroad, calendar years 1924-37.....	587
Section 5. <i>Balance of International Payments, 1920-37</i>	587-590
24. Estimated Balance of International Payments, 1935 and 1936.....	590
CHAPTER XVII.—INTERNAL TRADE.	
Section 1. <i>Interprovincial Trade</i>	591-593
1. Railway Revenue Freight Traffic Movement in Canada, by Provinces, calendar years 1935 and 1936.....	592-593
Section 2. <i>Grain Trade Statistics</i>	593-601
2. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1937.....	596-597
3. Numbers and Storage Capacities of Canadian Grain Elevators, licence years 1936 and 1937.....	597-598
4. Quantities of Canadian Grain Inspected during the crop years ended July 31, 1934-37.....	598-599
5. Shipments of Grain by Vessels from Fort William and Port Arthur for the navigation seasons 1936 and 1937.....	599
6. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur for the crop years ended July 31, 1936 and 1937.....	599
7. Canadian Grain Handled at Eastern Elevators, by crop years ended July 31, 1930-37.....	600
8. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, during the crop year ended July 31, 1937.....	600
9. Flour-Mills of Canada, with Their Equipment and Capacities, by Provinces, 1936, with Totals, 1935.....	601
Section 3. <i>Marketing of Live Stock and Animal Products</i>	601-608
10. Animals in Canada, Animals Killed or Sold by Farmers, and Wool Produced in Canada, by census years, 1871-1931.....	601
11. Index Numbers of Animals on Farms in Canada, calendar years 1921-37.....	602
12. Total Receipts of Live Stock and Disposition of Slaughter and Store Stock at Principal Markets in Canada, calendar years 1935 and 1936.....	602-603
13. Live Stock from Several Provinces of Canada, Marketed through Stockyards, Packers, etc., calendar year 1936.....	604
14. Grades of Live Stock from Several Provinces of Canada, Marketed at the Stockyards, calendar year 1936.....	604-605
15. Principal Statistics of the Slaughtering and Meat-Packing Industry of Canada, decennially 1871-1930, annually 1932-36.....	606
16. Live Stock Slaughtered at Canadian Inspected Establishments, by months, 1935 and 1936.....	606
17. Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1933-37.....	607-608
Section 4. <i>Cold Storage</i>	608-610
18. Cold Storage Warehouses in Canada, by Provinces, 1937.....	609
19. Stocks of Food Commodities on Hand in Cold Storages and Dairy Factories, by Months, 1936 and 1937.....	609-610
Section 5. <i>Bounties</i>	610-611
Section 6. <i>Patents, Copyrights and Trade Marks</i>	611-613
20. Numbers of Canadian Patentees, by Provinces of Residence, for the fiscal years ended Mar. 31, 1926-37.....	612
21. Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1932-37.....	612
22. Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1932-37.....	613
23. Receipts, Expenditures, and Surplus on Account of Patents, Copyrights, and Trade Marks, fiscal years ended Mar. 31, 1930-37.....	613
Section 7. <i>Weights and Measures</i>	613-614
24. Inspections by the Weights and Measures Service, fiscal years ended Mar. 31, 1936 and 1937.....	614
Section 8. <i>Electricity and Gas Inspection</i>	614-615
25. Numbers of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-37.....	615
26. Numbers of Gas Meters in Use, by Kinds of Gas Consumed, fiscal years ended Mar. 31, 1916-37.....	615
27. Quantity of each Kind of Gas Sold in Canada, fiscal years ended Mar. 31, 1920-37.....	615

CHAPTER XVII.—INTERNAL TRADE—concluded.

	Page.
Section 9. <i>Merchandising and Service Establishments</i>	616-631
Subsection 1. Wholesale and Other Bulk or Non-Retail Merchandising.....	616-619
25. Bulk Merchandising (Wholesale and Other Non-Retail) in Cities of 20,000 Population or Over, 1930.....	617
29. Total Sales and Indexes of Sales of Wholesalers Proper, by Provinces and Kinds of Business, 1930, 1933, 1935, and 1936.....	618
30. Unadjusted Index Numbers of Wholesale Sales, by Economic Divisions and by Kinds of Business, January, 1935, to December, 1937.....	619
Subsection 2. Retail Trade and Service Establishments.....	620-631
31. Retail Merchandise Trade in Cities of 20,000 Population or Over, 1930.....	620-621
32. Total Sales and Indexes of Sales of Retail Merchandise Trade, by Provinces and Kinds of Business, 1930, 1932-36.....	622-623
33. Numbers of Chains and Chain Stores in Selected Kinds of Business, 1923, 1930, 1933, and 1936.....	626
34. Principal Statistics for Chain Stores, 1930-36.....	626
35. Retail Sales of New Motor Vehicles in Canada, calendar years 1932-37, with Total Value for 1930.....	627
36. Comparison of Sales and Financing of New Vehicles in Canada, 1932-37.....	627
37. Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by months, 1929, 1930, and 1933-37.....	628
38. Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January 1935, to December, 1937.....	629
39. Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1935, and 1936.....	630
40. Principal Statistics for Motion Picture Theatres, by Provinces and Cities, 1935 and 1936.....	631
Section 10. <i>Control and Sale of Alcoholic Liquors and Beverages in Canada</i>	632-635
41. Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1934-36.....	634
42. Apparent Consumption of Spirits in Canada, fiscal years ended Mar. 31, 1922-37.....	635
43. Apparent Consumption of Malt Liquors, fiscal years ended Mar. 31, 1922-37.....	635
44. Apparent Consumption of Wines in Canada, fiscal years ended Mar. 31, 1922-37.....	635

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Part I.— <i>Governmental Control Over Agencies of Transportation and Communication</i>	637-639
Part II.— <i>Railways</i>	639-669
Section 1. <i>Steam Railways</i>	639-663
Subsection 1. <i>Mileage and Equipment</i>	642-644
1. Record of Steam Railway Mileage as at June 30, 1935-1919, and Dec. 31, 1919-36.....	642
2. Operated Steam Railway Mileage, by Provinces, Dec. 31, 1928-36.....	643
3. Rolling-Stock of Steam Railways, calendar years 1930-36.....	643-644
Subsection 2. <i>Finances of Steam Railways</i>	644-657
4. Capital Liability of Steam Railways, as at June 30, 1901-19, and Dec. 31, 1919-36.....	644
5. Mileage, Capital Liability, Earnings and Operating Expenses of Individual Steam Railways for the calendar year 1936.....	645
6. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1931-36.....	646
7. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, for the years ended June 30, 1915-19, and the calendar years 1919-36.....	646
8. Distribution of Operating Expenses of Steam Railways, calendar years 1933-36.....	647
9. Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratio of Salaries and Wages to Operating Revenues and Expenses, 1912-36.....	647
10. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments to Dec. 31, 1936, by Type of Grant.....	648
11. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments to Dec. 31, 1936, by Railway Companies.....	648
12. Cash Subsidies Granted to Railways to Dec. 31, 1936, by Railways.....	649
13. Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1936.....	649
14. Canadian Government Investments in Railways, including Loans, to Mar. 31, 1937, and for the fiscal year 1937.....	650
15. Gross Revenues, Operating Expenses, Net Revenues, Interest on Funded Debt, and Deficits of the Canadian National Railways, calendar years 1923-36.....	651
16. Long-Term Debt of Canadian National Railways (Including Appropriations for Canadian Government Railways), Showing Principal Outstanding at ends of calendar years 1922-36.....	652-653
17. Reconciliation between Public Accounts, Mar. 31, 1937, and Canadian National Railways' Balance Sheet, Dec. 31, 1936, with Respect to the Railways' Obligations to the Dominion Government.....	654
18. Funds Received and Expended by Canadian National Railways, calendar years 1923-36.....	654-655
19. Assets of the Canadian National Railways System, as at Dec. 31, 1922 and 1936.....	655-656
Subsection 3. <i>Steam Railway Traffic</i>	657-663
20. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the calendar years 1920-36.....	658-659
21. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1935 and 1936.....	660

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.		PAGE.
Section 1. <i>Steam Railways</i> —concluded.		
Subsection 3. <i>Steam Railway Traffic</i> —concluded.		
22. Commodities Hauled as Freight on Steam Railways during the calendar years 1932-36.....		661-662
23. Numbers of Passengers, Employees and Others Killed or Injured on Steam Railways, calendar years 1920-36.....		662
24. Numbers of Persons Killed or Injured on Steam Railways in the calendar years 1934-36.....		663
Section 2. <i>Electric Railways</i>		
Subsection 1. <i>Equipment of Electric Railways</i>		
25. Mileage and Equipment of Electric Railways, calendar years 1933-36.....		664-665
Subsection 2. <i>Finances of Electric Railways</i>		
26. Financial Statistics of Electric Railways, calendar years 1919-36.....		665-666
27. Mileage, Capital, Earnings, Operating Expenses, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1936.....		666
Subsection 3. <i>Traffic of Electric Railways</i>		
28. Summary Statistics of Electric Railway Operation, calendar years 1919-36.....		666-667
29. Numbers of Passengers, Employees, and Others Killed or Injured on Electric Railways, calendar years 1919-36, with Totals from 1894 to June 30, 1919.....		667
Section 3. <i>Express Companies</i>		
30. Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919-36.....		667-669
31. Revenues, Expenses, and Operating Mileage of Express Companies, by Companies, calendar years 1935 and 1936.....		668
32. Business Transacted by Express Companies in Financial Paper, calendar years 1932-36.....		669
Part III.—Road Transportation		
Section 1. <i>Provincial Motor Vehicle and Traffic Regulations</i>		
Section 2. <i>Roads and Vehicles</i>		
Subsection 1. <i>Roads and Highways</i>		
1. Classification of Canadian Highways, by Provinces, 1936.....		669-680
Subsection 2. <i>Motor Vehicles</i>		
2. Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1920-36.....		669-671
3. Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1935 and 1936.....		671-673
4. Apparent Consumption of Automobiles in Canada, 1917-36.....		672-673
Section 3. <i>Finances of Road Transportation</i>		
5. Capital, Maintenance and General Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1932-36.....		672
6. Provincial Government Funded Highway Debt and Annual Charges Thereon, 1934-36.....		673
7. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, calendar years 1935 and 1936.....		674-677
Section 4. <i>Road Traffic</i>		
8. Sales of Gasoline in Canada, by Provinces, calendar years 1932-36.....		677-680
9. Deaths Resulting from Motor Vehicle Accidents in Canada, by Provinces, calendar years 1926-36.....		678
10. Persons Killed or Injured in Motor Vehicle Accidents, as Reported by Provincial Motor Vehicle Authorities, showing Status of Person, 1936.....		679
Part IV.—Waterways		
Section 1. <i>Equipment and Facilities</i>		
Subsection 1. <i>Shipping</i>		
1. Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1927-36.....		680-708
2. Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years ended Mar. 31, 1927-37.....		682-691
Subsection 2. <i>Aids to Navigation and Miscellaneous Works</i>		
3. Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1926-37.....		682-683
4. Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, calendar years 1911-37.....		683
Subsection 3. <i>Canals</i>		
5. Canals of Canada, Length and Lock Dimensions, 1938.....		685-686
Subsection 4. <i>Harbours</i>		
6. Dimensions of Graving Docks Owned by the Dominion Government.....		686
7. Dimensions and Cost of Graving Docks Subsidized under the Dry Dock Subsidies Act, 1910.....		686-688
Subsection 5. <i>Government Administrative Services</i>		
8. Steamboat Inspection, by Inspection Divisions, fiscal years ended Mar. 31, 1936 and 1937.....		688
9. Numbers of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908-36.....		688-691
10. Canadian Wrecks and Casualties, 1911-36.....		689-690
Section 2. <i>Financial Statistics of Waterways</i>		
11. Capital Expenditures of the Dominion Government on Waterways and Harbours, to Mar. 31, 1937.....		690
12. Expenditures of the Dominion Government for Maintenance and Operation of Aids to Navigation, Canals and Harbours, fiscal years ended Mar. 31, 1935-37.....		691-696
13. Revenue of the Dominion Government from the Operation of Aids to Navigation, Canals and Harbours, fiscal years ended Mar. 31, 1935-37.....		692
14. Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1935-37.....		694

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.		PAGE.
Section 3. <i>Water Traffic and Services</i>		697-708
Subsection 1. <i>Shipping</i>		697-702
15. Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911-37.....		698
16. Numbers and Tonnages of Sea-Going and of All Vessels (Exclusive of Ferriage), Entered and Cleared at each Principal Canadian Port, fiscal year ended Mar. 31, 1937.....		700-701
17. Numbers and Tonnages of All Vessels (Exclusive of Ferriage), Entered and Cleared at Canadian Ports, 1923-37, with Details by Provinces for the fiscal year ended Mar. 31, 1937.....		702
Subsection 2. <i>Canal Traffic</i>		703-708
18. Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911-37.....		703
19. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1939 and 1937.....		703-704
20. Principal Commodities Carried through Canadian Canals, navigation seasons 1934-37.....		704
21. Canal Traffic, by Direction and Origin, navigation seasons 1936 and 1937.....		705
22. Freight Traffic Using the St. Lawrence River, Welland Ship and Sault Ste. Marie Canals, navigation season of 1937.....		706
23. Traffic to and from the East and West Coasts of Canada via the Panama Canal, years ended June 30, 1921-37.....		707
24. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1915-37.....		708
Subsection 3. <i>Harbour Traffic</i>		708
Part V.—Air Navigation		709-721
1. Statistical Summary of Civil Aviation in Canada, 1932-37.....		709-710
2. Licensed Civil Aircraft in Canada, Dec. 31, 1937.....		710
Section 1. <i>History and Administration</i>		710-716
Subsection 1. <i>Development of Aviation in Canada</i>		710-715
Subsection 2. <i>Administration</i>		715-716
Section 2. <i>Airports and Aircraft</i>		716-718
Subsection 1. <i>Ground Facilities</i>		716-718
3. Air Harbours in Canada, 1937.....		717
Subsection 2. <i>Aircraft</i>		718
Section 3. <i>Finances and Employees</i>		718-719
4. Investment for Civil Aviation in Canada, 1936.....		718
5. Revenues and Expenses of Aviation in Canada, 1936.....		719
6. Employees and Salaries and Wages in Civil Aviation, 1936.....		719
Section 4. <i>Traffic</i>		719-721
7. Commercial Air Traffic in Canada, by Provinces, 1937.....		719
8. Operations of Civil Aircraft in Canada, 1937, with totals for 1935 and 1936.....		720
9. Accidents Resulting from Aircraft in Flight in Canada, 1937.....		721
10. Non-Flight Accidents in Connection with Civil Aviation in Canada, 1937.....		721
11. Operation and Accident Averages in Commercial Aviation in Canada, 1937.....		721
Part VI.—Wire Communications		722-726
Section 1. <i>Telegraphs</i>		722-723
1. Summary Statistics of all Canadian Telegraphs, calendar years 1920-36.....		722
2. Statistics of Chartered Telegraph Companies for the calendar years 1932-36.....		723
Section 2. <i>Telephones</i>		723-726
Subsection 1. <i>Systems and Equipment</i>		724-725
3. Telephones in Use, Classified by Business, Residential, Rural and Public Pay, Mileages of Wire and Pole Line, 1911-36.....		724
4. Telephones in Use, by Provinces, Dec. 31, 1936.....		725
Subsection 2. <i>Telephone Finances</i>		725-726
5. Summary Financial Statistics of Telephones in Canada, 1911-36.....		725
6. Financial Statistics of Telephones in Canada, by Provinces, 1936.....		726
Subsection 3. <i>Telephone Calls</i>		726
7. Local and Long-Distance Calls and Averages per Telephone and per Capita, calendar years 1928-36.....		726
Part VII.—Wireless Communications		727-731
Section 1. <i>Radio-telephony</i>		727-729
1. Government-Owned Radio Stations in Canada, fiscal year ended Mar. 31, 1937.....		728
Section 2. <i>Radio-telephony</i>		729-731
Subsection 1. <i>Regulation of Radio-telephony</i>		729
2. Wireless and Radio Stations in Operation in Canada, Mar. 31, 1933-37.....		730
Subsection 2. <i>Canadian Broadcasting Corporation</i>		730-731
Part VIII.—The Post Office		731-737
1. Numbers of Post Offices in Operation, by Provinces, Mar. 31, 1932-37.....		732
2. Statistics of Gross Postal Revenues of Offices Collecting \$10,000 and upwards, fiscal years ended Mar. 31, 1936 and 1937.....		732-734
3. Revenues and Expenditures of the Post Office Department for the quinquennial fiscal years ended 1890-1910, and fiscal years ended Mar. 31, 1911-37.....		734

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.

Page.

Part VIII.—The Post Office—concluded.

4. Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911-37.....	735
5. Money Order Statistics, by Provinces, and Total Postal Notes, fiscal years ended Mar. 31, 1933-37.....	736
6. Mileage Flown and Weight of Mail Carried by Air, fiscal year ended Mar. 31, 1937.....	737

Part IX.—The Press.....

738-740

1. Number of Publications in Canada, by Frequency of Issue, 1928-36.....	738
2. Circulation of Daily, Semi-Weekly, and Weekly Publications in Canada, 1929-36 with Details by Provinces, 1936.....	739
3. Circulation of Daily, Semi-Weekly, and Weekly Publications, in Cities of 20,000 Population or Over, 1936.....	739
4. Number and Circulation of French Language Publications in Canada, by Provinces, 1935 and 1936.....	740

CHAPTER XIX.—LABOUR AND WAGES.

Part I.—Labour.....

741-802

Section 1. <i>Occupations of the Wage-Earning Population</i>	741-743
1. Numerical and Percentage Distribution of Wage-Earners, by Provinces, 1931.....	741
2. Numerical and Percentage Distribution of Wage-Earners, by Industrial Groups for Canada, 1931.....	742
3. Numerical and Percentage Distribution of Wage-Earners, by Occupational Groups for Canada, 1931.....	742
Section 2. <i>The Dominion Department of Labour</i>	743-746
Section 3. <i>Provincial Labour Departments and Bureaus</i>	746-750
Section 4. <i>Canadian and International Labour Organization</i>	750-752
Section 5. <i>Organized Labour in Canada</i>	752-755
4. Membership of Trade Unions in Canada, 1911-36.....	752
5. International Trade Unions Operating in Canada, showing Numbers of Branches and Members, December, 1936.....	753-754
6. Canadian Central Labour Bodies Operating in Canada, showing Numbers of Branches and Members, December, 1936.....	755
Section 6. <i>Fatal Industrial Accidents</i>	755-756
7. Fatal Industrial Accidents in Canada, by Industries, 1933-37.....	756
Section 7. <i>Workmen's Compensation in Canada</i>	756-762
8. Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917-37.....	757
9. Compensation Paid by the New Brunswick Workmen's Compensation Board, 1920-37.....	757
10. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-37.....	758
11. Benefits Awarded and Accidents Reported by the Ontario Workmen's Compensation Board, 1915-37.....	759
12. Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917-36.....	760
13. Compensation Paid and Accidents Compensated by the Saskatchewan Workmen's Compensation Board, 1930-36.....	760
14. Compensation Paid, and Accidents Reported and Compensated by the Alberta Workmen's Compensation Board, 1921-36.....	761
15. Compensation Paid and Accidents Compensated by the British Columbia Workmen's Compensation Board, 1917-36.....	762
Section 8. <i>Strikes and Lockouts</i>	762-765
16. Strikes and Lockouts in the Coal Mining, Other, and All Industries in Canada, calendar years 1921-37.....	763
17. Strikes and Lockouts, showing Number of Workers Involved and Time Loss, by Provinces, calendar years 1936 and 1937.....	763
18. Strikes and Lockouts, by Industries, 1936 and 1937.....	764
Section 9. <i>Employment and Unemployment</i>	765-769
Subsection 1. <i>Operations of the Employment Service of Canada</i>	765-766
19. Applications for Employment, Positions Offered, and Placements Effected by the Employment Service of Canada, 1920-37 and by Provinces, 1936 and 1937.....	766
Subsection 2. <i>Unemployment as Reported by Trade Unions</i>	767
20. Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1928-36 and by months, 1937.....	767
Subsection 3. <i>Employment as Reported by Employers</i>	768-771
21. Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1936, to December, 1937, with Yearly Averages since 1921.....	770-771
22. Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1936, to December, 1937, with Yearly Averages since 1922.....	772
23. Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1936, to December, 1937, with Yearly Averages since 1921.....	773-774
Subsection 4. <i>Employment and Unemployment Statistics of the Census</i>	774
Subsection 5. <i>Unemployment Relief</i>	774-777
24. Number of Settler Families and Individuals Approved and Settled under the Relief Acts Agreements to Dec. 31, 1937.....	777
25. Disbursements by the Dominion for Assistance Provided Under Relief Legislation, 1930-37.....	777
Subsection 6. <i>National Employment Commission</i>	778-779

CHAPTER XIX.—LABOUR AND WAGES—concluded.

	PAGE.
Section 10. <i>Old Age Pensions and Pensions for Blind Persons</i>	779-781
26. Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1937.....	780
27. Financial Summary of Pensions for Blind Persons in Canada, by Provinces, as at Dec. 31, 1937.....	781
Section 11. <i>The Co-operative Movement in Canada</i>	781-786
Subsection 1. Consumers' Co-operation.....	782
28. Statistics of Retail Co-operative Societies, Affiliated with the Co-operative Union of Canada, 1931-38.....	782
Subsection 2. Co-operative Credit in Quebec.....	783
29. Progress of Co-operative People's Banks in Quebec, 1915, 1920, 1925 and 1930-36.....	783
Subsection 3. Agricultural Co-operation in Canada in 1938.....	784-786
30. Farmers' Co-operative Business Organizations in Canada, 1936.....	786
Section 12. <i>Labour Legislation in Canada</i>	787-796
Section 13. <i>Legislation Respecting Combinations in Restraint of Trade</i>	796-798
Section 14. <i>Mothers' Allowances</i>	798-802
31. Mothers' Allowances in Nova Scotia, fiscal years 1931-36.....	799
32. Mothers' Allowances in Ontario, fiscal years 1921-37.....	800
33. Mothers' Allowances in Manitoba, fiscal years 1919-37.....	800
34. Mothers' Allowances in Saskatchewan, fiscal years ended Apr. 30, 1929-37.....	801
35. Mothers' Allowances in Alberta, 1919-37.....	801
36. Mothers' Allowances in British Columbia, fiscal years ended Mar. 31, 1921-37.....	802

Part II.—Wages and Cost of Living.....

Section 1. <i>Wage Rates</i>	802-804
1. Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-37.....	803
2. Rates of Wages and Hours of Labour in Various Trades and of Unskilled Factory Labour in Certain Cities of Canada, 1937.....	804
Section 2. <i>Wages and Hours of Labour Under Provincial Minimum Wage Legislation</i>	804-810
Subsection 1. Minimum Wages for Females.....	805-808
3. Minimum Wage Rates for Female Workers in Canada Under Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1937.....	806-807
Subsection 2. Minimum Wages for Male Employees.....	808-809
Subsection 3. Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.....	809-810
Section 3. <i>Cost of Living of Wage-Earners</i>	810-811
4. Changes in the Cost of Living in Canada from 1914 to 1937.....	811
Section 4. <i>Earnings in the Census Year, 1931</i>	811

CHAPTER XX.—PRICES.

Section 1. <i>Wholesale Prices of Commodities</i>	812-819
Subsection 1. Historical Review of Canadian Prices.....	812-813
1. Annual Index Numbers of Wholesale Prices in Canada, 1897-1937.....	813
Subsection 2. The Index Number on a Post-War Base (1926).....	813-819
2. Weighted General Wholesale Price Index Numbers, by Months, 1928-37.....	814
3. Annual Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), by Groups (Chief Component Material Classification), 1913-37 with Monthly Figures for 1936-37.....	815
4. Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Purpose, Yearly Averages, 1914-37, and Individual Months, 1936-37.....	816
5. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Yearly Averages 1931-37.....	817
6. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Months, 1933-37.....	817-819
Section 2. <i>Retail Prices of Commodities</i>	819-823
7. Index Numbers of Retail Prices, Rents and Costs of Services (on the 1926 Base), 1913-37.....	820
8. Index Numbers of Retail Prices, Rents and Costs of Services, by Months, 1933, 1936, 1937, and January-April, 1938.....	821
9. Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920, 1926, and 1929-37.....	822
10. Index Numbers of a Family Budget of Staple Foods, Fuel and Lighting, and Rent in Canada, by Provinces, 1928-37.....	823
Section 3. <i>Index Numbers of Security Prices</i>	823-827
11. Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1937.....	825
12. Index Numbers of 25 Preferred Stocks, by Months, January, 1927-April, 1938.....	826
13. Weighted Index Numbers of Prices of Mining Stocks (on the 1926 Base), by Months, January, 1936, to April, 1938.....	827
Section 4. <i>Prices of Services</i>	827-828
14. Average Daily Hospital Charges in Canada and Index Numbers Thereof (on the 1913 Base), 1913 and 1922-36.....	828
Section 5. <i>Index Numbers of Bond Yields</i>	828-829
15. Index Numbers of Dominion of Canada Long-Term Bond Yields, by Months, 1919-38.....	829
Section 6. <i>Wholesale Price Index Numbers of Principal Imports and Exports</i>	830-831
16. Index Numbers of Wholesale Prices of Exports and Imports, 1913-37.....	830-831

CHAPTER XXI.—PUBLIC FINANCE.

	PAGE.
Section 1. <i>Dominion Public Finance</i>	832-866
Subsection 1. The Current Balance Sheet of the Dominion.....	839-840
1. Balance Sheet of the Dominion of Canada, as at Mar. 31, 1933-37.....	839-840
Subsection 2. Receipts and Disbursements.....	840-850
2. Details of Revenue Receipts, fiscal years ended Mar. 31, 1933-37.....	841-842
3. Details of Expenditures, fiscal years ended Mar. 31, 1933-37.....	842-844
4. Principal Items of Dominion Expenditure, 1868-1937.....	845-847
5. Principal Items of Receipts (Consolidated Fund) and Total Receipts, 1868-1937.....	848
6. Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1937.....	849
7. Per Capita Revenue Receipts and Expenditure, by Principal Items, 1933-37.....	849-850
Subsection 3. War Tax Revenue.....	850-852
8. War Tax Revenue Received by the Receiver General, fiscal years ended Mar. 31, 1915-37.....	851
9. Summary of Excise War Taxes Collected by the Department of National Revenue, fiscal years ended Mar. 31, 1932-37.....	851
10. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year ended Mar. 31, 1937.....	852
Subsection 4. Inland Revenue.....	852-855
11. Details of Excise Duties Collected, fiscal years ended Mar. 31, 1932-37.....	854
12. Statistics of Distillation, fiscal years ended Mar. 31, 1932-37.....	854
13. Quantities of Spirits, Malt Liquor, Malt, and Tobacco Taken Out of Bond for Consumption, fiscal years ended Mar. 31, 1911-37.....	855
Subsection 5. Subsidies and Loans to Provinces.....	855-858
14. Subsidies of Dominion to Provincial Governments, fiscal years ended 1932-37.....	857
15. Total of Subsidy Allowances to Provincial Governments from July 1, 1897, to Mar. 31, 1937.....	857
16. Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years ended Mar. 31, 1934-38.....	858
17. Loans to Provincial Governments Outstanding, on Account of Housing, by Provinces, as at Mar. 31, 1920-38.....	858
Subsection 6. National Debt.....	859-866
18. Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1937.....	860-861
19. Funded Debt and Treasury Bills of the Dominion, Interest Payable Thereon, Date of Maturity, Rates of Interest, and Centres at Which Loans are Payable, as at Mar. 31, 1937.....	861-862
20. The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-37.....	863
21. Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-37.....	864
22. Securities Guaranteed by the Dominion Government, as at Mar. 31, 1937.....	865-866
Section 2. <i>Provincial Public Finance</i>	867-879
Subsection 1. Provincial Revenues and Expenditures.....	868-876
23. Ordinary, Capital, and Trust and Charity Revenues of Provincial Governments for their respective fiscal years ended 1936.....	870-871
24. Ordinary, Capital, and Trust and Charity Expenditures of Provincial Governments for their respective fiscal years ended 1936.....	872-873
25. Ordinary Revenues and Expenditures of Provincial Governments for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1936.....	874-875
26. Ordinary Revenues and Expenditures of Provincial Governments per Head of Population for their respective fiscal years ended in the census years 1871-1911, and in each year from 1916 to 1936.....	875-876
Subsection 2. Provincial Debts and Assets.....	876-879
27. Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, fiscal years 1910 to 1936.....	877
28. Debt of Provincial Governments at end of each respective fiscal year in 1935 and 1936, showing Bonded Debt with Offsetting Sinking Funds, Treasury Bills, Other Direct Liabilities, Available Assets Offsetting Direct Liabilities, and Indirect Liabilities.....	878
Section 3. <i>Municipal Public Finance</i>	879-885
29. Numbers of Municipalities, by Provinces and Classes, 1935.....	880
30. Tax Receipts of Municipalities in Canada, by Provinces, 1913-35.....	881
31. Summary Statement Showing Total Assessment Valuations of Municipalities, by Provinces, 1931-35.....	882
32. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-35.....	883
33. Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 or Over, 1935.....	884-885
Section 4. <i>National Wealth and Income</i>	885-899
Subsection 1. National Wealth.....	885-888
34. Estimate of the National Wealth of Canada, with Percentage and Per Capita Distributions of Component Items, 1929 and 1933.....	887
35. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.....	888
Subsection 2. National Income and Income Tax Statistics.....	889-896
36. Income Assessed for the Purposes of the Income War Tax, by Individuals and Corporations, fiscal years ended Mar. 31, 1921-37.....	892
37. Income Assessed for the Purposes of the Income War Tax, by Provinces, fiscal years ended Mar. 31, 1933-37.....	892

CHAPTER XXI.—PUBLIC FINANCE—concluded.

PAGE.

Section 4. <i>National Wealth and Income</i> —concluded.	
Subsection 2. <i>National Income and Income Tax Statistics</i> —concluded.	
38. Amounts of Income Tax Collected, by Provinces, fiscal years ended Mar. 31, 1933-37.....	893
39. Numbers of Individual and Corporate Taxpayers, by Size of Income and Amount of Taxes Paid under the Income War Tax Act, fiscal years ended Mar. 31, 1934-37.....	894
40. Income Tax Paid, by Occupations of the Taxpayers, fiscal years ended Mar. 31, 1934-37.....	895
41. Amount Received from Special Five Per Cent Tax on Interest and Dividends, fiscal year ended Mar. 31, 1937.....	896
Subsection 3. <i>British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad</i>	
42. Estimated British and Foreign Capital Invested in Canada, Classified According to Main Types, as at Dec. 31, 1926-35.....	898
43. Estimated Canadian Investments Abroad as at Dec. 31, 1926-35.....	899
44. Estimated British and Foreign Capital Invested in Canada as at Dec. 31, 1936.....	899
45. Estimated Canadian Investments Abroad as at Dec. 31, 1936.....	899

CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE.

Part I.—Currency and Banking.....		900-932
Section 1. <i>Historical Sketch</i>		900-903
Section 2. <i>The Bank of Canada</i>		906-909
Subsection 1. <i>The Bank of Canada Act and its Amendment</i>		906-908
Subsection 2. <i>The Bank of Canada and Its Relationship to the Canadian Financial System</i>		908
Subsection 3. <i>Bank of Canada Operations</i>		908-909
1. Liabilities and Assets of the Bank of Canada, Mar. 18, 1935 and Dec. 31, 1935-37.....		908
Section 3. <i>Currency</i>		910-914
Subsection 1. <i>Canadian Coinage</i>		910-911
2. Particulars of Canadian Coinage Current in 1938.....		910
3. Circulation of Canadian Coin at Dec. 31, 1926-37.....		910
4. Annual Receipts of Gold Bullion at the Ottawa Mint, and Bullion and Coinage Issued, calendar years 1926-37.....		911
Subsection 2. <i>Dominion and Bank of Canada Notes</i>		912-913
5. Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932, and 1935-37.....		913
Subsection 3. <i>Chartered Bank Notes</i>		913-914
6. Note Circulation in the Hands of the Public, 1926-37.....		914
Section 4. <i>Monetary Reserves</i>		914-915
Subsection 1. <i>Bank of Canada Reserves</i>		914
Subsection 2. <i>Chartered Bank Canadian Cash Reserves</i>		914-915
7. Cash Reserve of the Chartered Banks in Canada, 1926-37.....		915
Section 5. <i>Commercial Banking</i>		915-930
Subsection 1. <i>Historical</i>		915-917
8. Bank Absorptions in Canada since 1867.....		916-917
Subsection 2. <i>Combined Statistics of Chartered Banks</i>		917-923
9. Historical Summary Showing Development of the Canadian Chartered Banking Business, calendar years 1867-1937.....		918-919
10. Assets of Chartered Banks, 1929, 1932, and 1935-37.....		920
11. Liabilities of Chartered Banks, 1929, 1932, and 1935-37.....		921
12. Ratio Comparisons of Certain Assets and Liabilities of Chartered Banks, 1926-37.....		921
13. Classification of Deposits, According to Size, in Chartered Banks in Canada, as at Oct. 31, 1935-37.....		922
14. Loans, According to Class, made by Chartered Banks in Canada, and Outstanding as at Oct. 31, 1935-37.....		922
15. Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada for the calendar years 1933-37.....		923-924
16. Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, calendar years, 1933-37.....		925
Subsection 3. <i>Statistics of Individual Chartered Banks</i>		925-930
17. Principal and Total Assets of Individual Chartered Banks, 1929 and 1934-37.....		926
18. Principal and Total Liabilities of Individual Chartered Banks, 1929 and 1934-37.....		927
19. Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1932-37.....		928
20. Numbers of Branches of Chartered Banks in Canada, by Provinces, Dec. 31, 1908, 1902, 1905, 1920, 1926, 1930, 1934-37.....		929
21. Numbers of Branches of Individual Canadian Chartered Banks in each Province and in Other Countries at Dec. 31, 1937.....		929
22. Numbers of Branches of each of the Canadian Chartered Banks in Other Countries, with their Locations, Dec. 31, 1936 and 1937.....		930
Section 6. <i>Government and Other Savings Banks</i>		930-932
23. Deposits with Dominion Government Savings Banks, for representative years ended June 30, 1908-1909, and Mar. 31, 1907-37.....		931
24. Summary of the Financial Business of the Post Office Savings Bank, Mar. 31, 1932-37.....		931
25. Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, as at June 30, for representative years 1898-1906, and Mar. 31, 1907-37.....		932

CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE—concluded.

	Page.
Part II.—Miscellaneous Commercial Finance	933-943
Section 1. <i>Loan and Trust Companies</i>	933-937
1. Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, as at Dec. 31, 1936.....	934
2. Classification of Assets and Liabilities of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1920-36.....	935
3. Classification of Assets and Liabilities of Trust Companies Chartered by the Dominion Government, as at Dec. 31, 1920-36.....	936-937
4. Amount of Estate, Trust and Agency Funds of Trust Companies Chartered by the Dominion Government as at Dec. 31, 1920-36.....	937
Section 2. <i>Small Loans Companies</i>	937-938
5. Classification of Assets and Liabilities of Small Loans Companies Chartered by the Dominion Government as at Dec. 31, 1928-36.....	938

22. Income and Expenditure in Canada of Companies, other than Canadian, doing Insurance Business other than Fire and Life, 1936.....	971
23. Dominion and Provincial Insurance in Canada, other than Fire and Life, 1936.....	972
Section 4. <i>Government Annuities</i>	973-974
24. Government Annuities Contracted for, and Purchase Money Received, fiscal years ended Mar. 31, 1909-37.....	973
25. Government Annuities Fund Statement, fiscal years ended Mar. 31, 1936-37.....	974
26. Valuation of Annuity Contracts Issued Pursuant to the Government Annuities Act, 1908, as at Mar. 31, 1936 and 1937.....	974

CHAPTER XXIV.—COMMERCIAL FAILURES.

PAGE.

1. Industrial and Commercial Failures in Canada, by Classes, 1934-37, and by Provinces, 1937.....	975
2. Industrial and Commercial Failures in Canada, by Provinces, 1935-37.....	976
3. Industrial and Commercial Failures in Canada, by Divisions of Industry, 1935-37.....	976-977
4. Commercial Failures in Canada, by Provinces, calendar years 1922-36.....	978
5. Commercial Failures in Canada, by Branches of Business, calendar years 1924-36.....	978
6. Estimated Assets and Liabilities of Commercial Failures in Canada, calendar years 1922-36.....	978
7. Totals of Assets, Liabilities, Assets Realized, and Costs of Administration in Bankrupt Estates Closed in the calendar years 1933-37 and by Provinces for 1937.....	979

CHAPTER XXV.—EDUCATION.

Section 1. <i>Schools, Colleges and Universities</i>	980-997
1. Enrolment in and Expenditure on Educational Institutions in Canada, by Provinces, 1936, or Latest Year Reported.....	984
Subsection 1. The Provincially-Controlled Schools.....	985-990
2. Historical Summary of Average Daily Attendance in Provincially-Controlled Schools, by Provinces, 1911-36.....	985
3. Age Distribution of Pupils in the Provincially-Controlled Schools, by Provinces, 1936.....	988
4. Average Annual Salaries Received by Teachers in Rural and Urban Schools, by Provinces, 1926 and 1930-36.....	988
5. Financial Support of the Provincially-Controlled Schools in Canada, by Provinces, 1926, 1931, and Latest Years.....	989
6. Expenditures of School Boards, by Provinces, 1926, 1931, and Latest Years.....	990-991
Subsection 2. Private Schools.....	990
7. Enrolment in Private Elementary and Secondary Schools in Canada, by Provinces, 1921, 1926, 1931, and 1936.....	991
[] 8. Enrolment in Private Business and Commercial Schools (Business Colleges) in Canada, by Provinces, 1921, 1926, 1931, and 1936.....	991
Subsection 3. Higher Education.....	991-997
9. Graduates from Canadian Universities and Colleges, 1920-36.....	993-997
Section 2. <i>Scientific and Industrial Research in Canada</i>	997
Section 3. <i>The Libraries of Canada</i>	997
Section 4. <i>Art in Canada</i>	997

CHAPTER XXVI.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

Section 1. <i>Administration</i>	998-1006
Subsection 1. Public Health Activities of the Dominion Government.....	999-1001
Subsection 2. Public Health Activities of the Provincial Governments.....	1002-1006
Section 2. <i>Institutional Statistics</i>	1006-1016
1. Number of Institutions in Canada, by Provinces, 1936.....	1007
Subsection 1. Statistics of Hospitals, other than Mental.....	1007-1012
2. Summary Statistics of Reporting Hospitals in Canada, calendar years 1932-36.....	1008
3. Statistics of Reporting Hospitals, by Provinces, Showing Staff, Facilities, and Movement of Population, calendar year 1936.....	1008-1011
4. Public Hospitals Operating Out-Patient Departments, 1936.....	1012
Subsection 2. Statistics of Mental Hospitals.....	1013-1014
5. Statistics of Capacity, Staff, Movement of Population, and Finances of Mental Institutions in Canada, by Provinces, calendar year 1936.....	1013-1014
Subsection 3. Charitable and Benevolent Institutions.....	1014-1016
6. Summary Statistics of Charitable and Benevolent Institutions in Canada, June 1, 1936.....	1014-1016
Subsection 4. Corrective and Reformatory Institutions.....	1015-1016
7. Summary Statistics of Corrective and Reformatory Institutions, by Provinces, June 1, 1936.....	1015-1016
Section 3. <i>The Victorian Order of Nurses</i>	1016
Section 4. <i>The Canadian Red Cross Society</i>	1017

CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS.

Section 1. <i>General Tables</i>	1018-1022
1. Convictions for Criminal Offences, by Classes, Convictions for Minor Offences, and Total Convictions, with Proportions to Population, years ended Sept. 30, 1911-36.....	1019
2. Convictions for Criminal and Minor Offences, by Class of Offence, Compared as to Numbers and Ratios, years ended Sept. 30, 1932-36 (Including Juveniles).....	1020
3. Convictions and Sentences for All Offences, by Provinces, years ended Sept. 30, 1930-36.....	1021-1022
Section 2. <i>Indictable Offences of Adults</i>	1022-1027
4. Convictions of Persons 16 Years of Age or Over for Indictable Offences, by Provinces, years ended Sept. 30, 1911-36.....	1023
5. Charges, Convictions and Percentages of Acquittals for Indictable Offences, by Provinces, years ended Sept. 30, 1934-36.....	1023
6. Indictable Offences, by Classes, years ended Sept. 30, 1934-36.....	1024-1025
7. Charges, Acquittals, Convictions, and Sentences in respect of Indictable Offences, years ended Sept. 30, 1930-36.....	1024
8. Persons Convicted of Indictable Offences, Classified by Occupation, Conjugal Condition, Birthplace, Religion, etc., years ended Sept. 30, 1930-36.....	1026

CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS—concluded. PAGE.

Section 3. <i>Summary Convictions of Adults</i>	1027-1031
9. Summary Convictions, by Provinces, years ended Sept. 30, 1911-36	1027-1038

¹The figures for 1937 are subject to revision.²The figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese, and quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 1 cents.³Revised since the publication of the 1937 Year Book.⁴1907.⁵Previous

¹ The figures for 1937 are subject to revision.² In thousands.³ The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911 and 1916 are for works employing only 5 hands and over except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding years in each case. From 1922 statistics are exclusive of construction, hand trades, repair and custom work. Figures for 1925-35 include non-ferrous metal smelting not included in earlier years.⁴ Includes all establishments irrespective of the number of employees.

NOTE.

In the foregoing Summary, the statistics of fisheries (1871-1916), trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1909; subsequently to years ended Mar. 31. Agricultural, dairy, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-37. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

CHAPTER I.—PHYSIOGRAPHY.

PART I.—GEOGRAPHICAL FEATURES.*

Situation.—The Dominion of Canada comprises the whole northern part of the North American continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (which includes Labrador). It takes in the whole Arctic archipelago between Davis strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the United States; on the east by the Atlantic ocean, the waters between Newfoundland and the Gulf of the St. Lawrence, Labrador, Davis strait, and the dividing waters between the Danish territory of Greenland and Ellesmere island; northward it extends to the North Pole.

The southernmost point is Middle island in lake Erie, in north latitude $41^{\circ}41'$, and from east to west Canada extends from about west longitude 57° at Belle Isle strait to west longitude 141° , the boundary of Alaska. Canadian territory thus extends over 84° of longitude and 48° of latitude.

Area.—The area of the Dominion is 3,694,863 square miles, a figure which may be compared with that of 3,738,395 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the total area of Australia, 3,275,510 the area of Brazil, 1,805,252 the area of India, 121,633 the area of the British Isles. Canada's area is over 27 p.c. of the total area of the British Empire as it is shown on page 165 of the 1934-35 Year Book.

Political Subdivisions.—Canada is divided from east to west into the following provinces: the Maritime Provinces of Nova Scotia, Prince Edward Island, and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence river and the whole territory north of the St. Lawrence river and east of the Ottawa river to Hudson strait, except the coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan, and Alberta, the provinces of the interior continental plain, extending from the boundary of the United States to 60° north latitude; and British Columbia, the province of the Cordilleran region, also extending from the International Boundary to 60° N. North of the area included in the provinces the country is divided into the Yukon Territory to the west, abutting on Alaska, and the Northwest Territories. The latter is subdivided into three provisional districts: that of Mackenzie comprises the mainland between Yukon and the meridian of longitude 102° W.; the district of Keewatin comprises in general the remainder of the mainland between the district of Mackenzie and Hudson bay, and includes the off-shore islands in Hudson and James bays; the district of Franklin comprises in general the Arctic archipelago.

Prince Edward Island.—This, the smallest province of the Dominion, lies just off the coast east of New Brunswick and north of Nova Scotia from both of which it is separated by Northumberland strait from ten to twenty-five miles wide. It is about 120 miles in length and, with an average width of 20 miles, covers an area of 2,184 square miles, approximately 200 square miles more than the State of Delaware. The island is almost trisected by the deep indentations of Malpeque bay north of Summerside and by the mouth of the Hillsborough river at Charlottetown, which nearly meets Tracadie bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the island attains a greater

*Revised by F. H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottawa.

altitude than about 450 feet above sea-level. Its climate, tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

Nova Scotia.—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long, narrow strip of land lying parallel to the Maine and New Brunswick coasts and joined to the latter province by the isthmus of Chignecto, which is 15 miles in width. It includes to the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,068 square miles, a little over 2,000 square miles less than the combined areas of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,970 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low mountainous country running through the centre of the Nova Scotia mainland, the highest altitude of which is less than 1,500 feet, divides it roughly into two slopes. That facing the Atlantic is generally rocky and open to the sweep of Atlantic storms, but the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys noted for general farming and for fruit-farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours, many of which provided splendid homes and refuges for the old sail fishing fleets. The province is still the home of an extensive fishing industry. The mineral resources of Nova Scotia were among the first in the Dominion to be exploited as some of its coal deposits outcropped on the sea-coast. These valuable coal measures make Nova Scotia still one of the chief coal-producing provinces of the Dominion. In addition, there are extensive areas of gold-bearing formations and valuable deposits of gypsum.

New Brunswick.—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of about 2,690 feet in Northumberland county north-east of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. The bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south, and Passamaquoddy bay at the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of which are Grand Manan, Campobello, and the West Isles. New Brunswick has been called the best watered country in the world; numerous rivers

provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion. While its forest resources are an important economic feature, extensive areas of rich agricultural lands are found in the river valleys and the broad plains near the coasts. The Minto coal-fields, though producing on a limited scale for many years, have shown an expanding tendency recently and the province also produces a limited quantity of petroleum and natural gas.

Quebec.—Quebec might well be included among the Maritime Provinces, for with the St. Lawrence river, the gulf of St. Lawrence, the Atlantic, Hudson strait and bay, salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,534 square miles, about 38 p.c. of which lies south of the isotherm of 60° F. mean July temperature.* The combined areas of France, Germany, and Spain are about 2,600 square miles less than the area of Quebec. The conformity of the surface of Quebec is in general that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river, the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest known elevation in the province, *viz.*, 4,160 feet, that of Jacques Cartier peak of Tabletop mountain in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay, most of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the Atlantic gateway through which ocean vessels must pass on their way to the interior of the continent, Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of the present and the future. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply about two-fifths of the electric power available in Canada. Its asbestos deposits have long been known for their quality and extent, while more recently there have been extensive developments of deposits of gold and copper in the northwestern part of the province, with further discoveries extending the mineralized area into the Chibougamau district. These developments have brought the province up to third place in mineral production in Canada. The fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

Ontario.—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Although generally regarded as an inland province, Ontario has a fresh-water shore line on the Great Lakes of more than 2,362 miles and on the north a salt-water shore line of about 680 miles with a tidal port at Moosonee at the southern end of James bay. The

* The isotherm of 60° F. mean July temperature is generally considered as the northern limit for the economic production of cereals.

southernmost point of Ontario, which is also the southernmost point of the Dominion, is in north latitude $41^{\circ} 41'$ —a little further south than the northern boundary of the State of California—and its most northern, in north latitude $56^{\circ} 50'$. The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 412,582 square miles, of which its fresh-water area of 49,300 square miles forms the unusually large proportion of 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and going north a short distance over the Height of Land the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying, from south to north, from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces, is the centre of the country's manufacturing industries, owing to its abundant water-power resources and its proximity to the coalfields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining is a very important industry in the wide-spread Precambrian area and, although the most important districts are Sudbury, Porcupine, and Kirkland Lake, profitable mining operations, principally of gold, are now being carried on from the Manitoba boundary eastward across northern Ontario and down into eastern Ontario. There is also an important production of petroleum and natural gas, salt, and gypsum in the southwestern part of the province. Fruit farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp, and furs are other important products of more northern parts.

Manitoba.—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 246,512 square miles—3,246 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip bordering on Hudson bay—perhaps 100 miles wide and less than 500 feet in elevation—the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, and the greatest height of 2,727 feet is attained in Duck mountain, north-west of lake Dauphin. East and north of lake Winnipeg the Canadian Shield is found with its Precambrian rock formation, but the remainder of the province is overlain by very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt, characterized by groves of poplar interspersed with open prairie

* See footnote, p. 3.

patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thin again to some treeless areas along the coast-line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry. Its northern districts, however, are of importance in the production of timber and furs and its numerous large lakes in the production of fresh-water fish, chiefly whitefish. About three-fifths of the area of this province is underlain by the Precambrian rocks which have been found so rich in minerals in northern Ontario and Quebec. Two large deposits of copper-gold-zinc ore have been developed, south of the Churchill river near the Manitoba-Saskatchewan boundary, while to the east and north of lake Winnipeg recent years have witnessed great activity in the prospecting and development of gold properties, a number of which are now producing. The province also possesses important water-power resources in the rivers of the Precambrian area.

Saskatchewan.—This central prairie province lies between Manitoba and Alberta; it extends from the International Boundary on the south to the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 251,700 square miles, approximating that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. Approximately one-third of the total area, generally lying north of the Churchill river, is underlain by the Precambrian rocks which have been found so richly mineralized in other parts of Canada. The Flinflon copper-gold-zinc deposit on the Manitoba-Saskatchewan boundary is an evidence of economic mineralization in the east, while in the Lake Athabaska region of the northwest promising discoveries of gold have been made recently. The northern districts, abundantly watered by lakes and rivers, in addition to potential mineral wealth, are rich in timber resources while the southerly two-thirds of the province overlain by generally fertile soil of great depth includes a large portion of the famous western wheat fields. The larger part of the developed area in the south is comprised in the great treeless prairie belt, fringed to the north with a zone of poplar interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief with a gradually rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate in the southern parts is quite different from that of Eastern Canada, with less precipitation and perhaps more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant growth, when sufficient moisture is available.

Alberta.—Lying between Saskatchewan on the east and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States, respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° F. mean July temperature.* The area of the province is over 8,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan, the southern part of the province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The

* See footnote, p. 3.

Precambrian rocks just touch Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada, and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commence the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Alberta has the most extensive coal resources of any province of the Dominion and has also become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, while ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and in these areas a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

British Columbia.—British Columbia, the most westerly province of the Dominion, comprises an area of 366,255 square miles, slightly more than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district, traversed by the Canadian National railway running west from Fort George to Prince Rupert. The highest point in the province is mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways, British Columbia is well situated and equipped to carry on trade with the Orient, while its great stands of fir, spruce, and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter, with an area of about 12,408 square miles, is noted for its temperate climate and abundant natural resources. The wealth of the forest resources supports the lumbering and pulp and paper industries and puts British Columbia ahead of any other province in the production of lumber and timber. The province also excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. The production of the metals, gold, copper, silver, lead, and zinc, has played an important role in the economic life of the province since its early days, while valuable coal deposits on Vancouver island, and at Crow's Nest and Fernie in the interior, have been worked for many years. The boundaries of the province extend from Alberta on the east to the Pacific ocean and Alaska on the west, and from the International Boundary northward to Yukon.

Yukon and Northwest Territories.—The vast area of 1,516,758 square miles is included within the boundaries of Canada's northern subdivisions, the Yukon Territory and the three provisional districts of the Northwest Territories. This is over twelve times the area of the British Isles, nearly half the area of the United States, and more than the combined areas of the Argentine Republic and Chile in South America. The northern territories are as yet, in parts, unexplored, but travel and transport by air is having a great influence in their further exploration and development. By means of aeroplane photography, the mapping of areas adjacent to the chief transportation routes and mineral discoveries is being rapidly extended. There are many widely scattered indications of mineral wealth in these territories. The discovery of alluvial gold in the Yukon was the cause of the first opening up of that territory, which of late years has been producing coal for local requirements and exporting silver and lead, as well as gold. The presence of copper deposits in the Coppermine River area has been known for many years and recent exploration substantiates their probable eventual worth. More recently, at the east end of Great Bear lake, rich deposits of silver-radium ore have been discovered and are now being mined. Oil wells which have been drilled at Norman on the Mackenzie river are providing a source of power for the mining and transportation activities, as well as a convenient fuel for the increasing number of residents in the district. Promising gold prospects have been located in the Great Slave Lake area. Because a large portion lies within the Arctic circle, the tendency has been to associate with the Northwest Territories thoughts of ice and snow but as our knowledge is increased the argument steadily gains more weight that what have been regarded in the past as the great "barren lands" of the northern mainland, are more appropriately described as our great northern prairies.

Development of the resources of, and communications in, the Northwest Territories and Yukon are dealt with in Chapter XXVIII, Subsection 1 of Section 1.

Summary of Land and Water Area.—The total land and fresh-water areas of the Dominion, together with its distribution by provinces and territories, are shown in Table 1.

1.—Land and Fresh-Water Areas of Canada, by Provinces and Territories, 1937.¹

² Approximate.

Section 1.—Orography.

The outstanding and predominant orographical feature in Canada is the great Cordilleran mountain system which, extending up from the south, parallels the coast of the Pacific ocean, and, continuing on, comprises the bulk of the United States territory of Alaska. Throughout Canada this mountain system has a width of about four hundred miles and, covering about 530,000 square miles in area, includes nearly all of British Columbia and Yukon. This region is definitely the most rugged and elevated in the Dominion, many of the summits reaching heights of 10,000 feet with occasional peaks over 13,000 feet above sea-level. The principal named peaks exceeding 11,000 feet in elevation are given in Table 2. The main mountain ranges forming the system are the Coast mountains and the St. Elias mountains on the Pacific side, the Selkirks and the Rockies on the east side of the system to the south, and further north on the east side the Stikine and the Mackenzie mountains. This great mountainous tract is a formidable barrier between the ocean and the interior of Western Canada; by precipitating a great part of the moisture out of the winds coming from the Pacific, it has a marked effect on the climate of the western country. On the west side, the Cordilleras are drained by mountain streams pitching swiftly down to the Pacific. The Yukon territory is drained to the north by that remarkable river of the same name which runs through a wide valley over 1,700 miles long before reaching the Bering sea. On the east side of the mountains and their foothills, the land slopes gently away to the east and to the north.

2.—Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.

NORW.—The highest mountain in Eastern Canada, with the exception of the Torngats in Labrador, peaks of which rise to about 5,500 feet, is Tabletop mountain (recently re-named Mount Jacques Cartier by the Geographic Board of Canada) in N. lat. 48°59', W. long. 65°55', Gaspé district, Quebec, the summit of which is 4,160 feet above sea-level.

¹ This peak is on the international boundary between British Columbia and Alaska. ² The enumerated peaks in Yukon are on or near the Yukon-Alaska boundary. ³ Data not available.

The southern portion of the eastern declivity, from the Rocky mountains down to lake Winnipeg, is comprised in the Nelson River drainage emptying into Hudson bay; representing the presently settled part of Western Canada, it includes the treeless prairies and comprises the lands which, in the main, produce Canada's great wheat crops. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of clay soil, through which the streams have cut themselves down into deep coulees and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the evaporation from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and, from an elevation of 3,400 feet at Calgary, falls away gradually to an elevation of 800 feet around lake Winnipeg seven hundred miles to

the east. Just north of Edmonton a height of land turns the waters to flow north into the great Mackenzie river, over 2,500 miles long, whose valley with its low elevation above the sea is the outstanding feature of the Northwest Territories. In this watershed the terrain becomes less smooth with prominent elevations in the Caribou, Horn, and Franklin mountains and the clay soils of the prairies give way to more of sand and gravel. Great Slave and Great Bear lakes, each half as large again as lake Ontario and less elevated above the sea than lake Erie, are notable features; north and east of these two great lakes the country comes within the Canadian Shield* and the rock with some shallow overburden slopes gently down to the Arctic ocean without any large uplifts to break the monotony.

Going east again, in the more northerly part there is encountered the orographical influence of Hudson bay which, indenting the continent so deeply and with rivers running in from west, south, and east, has an enormous drainage basin mainly in Manitoba, Ontario, and Quebec. Practically all of this great basin, excepting the Nelson River drainage, is included in the Canadian Shield, the surface characteristic of which is hard rock either exposed or overlain with shallow soil generally confining agriculture to the valleys or small basins. With only small areas in northeastern Quebec rising above 2,000 feet in elevation, there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams. On its west and south sides, Hudson bay is bordered by a strip of low land under 500 feet in elevation and varying in width from one to two hundred miles; in the southerly part of these flat, low lands the rock is overlain with a considerable depth of soil sometimes referred to as the clay belt of northern Ontario.

South and east of Hudson bay the predominating feature, both orographically and economically, is the very extensive depression containing the Great Lakes and the St. Lawrence river which connects them with the Atlantic ocean. The bulk of the drainage basin of the Great Lakes and the St. Lawrence lies within the limits of the Canadian Shield with the same characteristics as already described. The very important exception is the valley of the St. Lawrence river from Kingston to Quebec and the peninsula of Ontario formed by the Great Lakes which together are generally known as the St. Lawrence Lowlands, about 35,000 square miles in area. At present, containing the greater part of the population of Canada, this industrial area is of great economic importance; the climatic conditions and fertile soil combine to make it most suitable for mixed farming.

The Maritime Provinces, New Brunswick, Nova Scotia, and Prince Edward Island, together with the southeastern portion of Quebec, embrace an extension northward of the Appalachian mountains but, excepting the Notre Dame mountains of Gaspé peninsula, the comparatively low elevations are better described as hills. The whole area may be regarded as a peninsula jutting out with bold and broken coast-line to separate the gulf of St. Lawrence from the Atlantic and it is this situation that dominates the orography; with the exception of the St. John, the rivers are of no great length in their courses down to the sea. It is a beautiful country of diversified character with areas of good farm lands; the broken coast provides many good harbours and the only ocean ports open throughout the whole year that Canada possesses on the Atlantic seaboard.

* Excepting the St. Lawrence Lowlands, the Maritime Provinces, and the Hudson Bay Lowland, the Canadian Shield embraces all of Canada east of a line commencing at Darnley bay on the Arctic coast and running south and east through Great Bear lake, Great Slave lake, lake Athabaska, lake Winnipeg, and Lake of the Woods on the International Boundary.

Section 2.—Lakes and Rivers.

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 3.

Particularly notable are the depth of lake Superior and the shallowness of lake St. Clair and lake Erie.

3.—Areas, Elevations, and Depths of the Great Lakes.

Lake.	Length.	Breadth.	Maximum Depth.	Area.	Elevation Above Sea-level.

Ontario.....	193	53	774	7,540	245-88

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the centre of lakes Superior, Huron, St. Clair, Erie, and Ontario, only a part of the areas of these lakes given in the above statement is Canadian, while the whole of lake Michigan is within United States territory. The total length of the St. Lawrence waterway, from the head of the St. Louis river in Minnesota to Pointe-des-Monts at the entrance of the gulf of St. Lawrence, is 1,900 miles. The great obstacle to navigation on this waterway was the rise of 326 feet between lakes Ontario and Erie, which is now surmounted by the new Welland canal; the river itself dropping over the escarpment at Niagara creates perhaps the most famous waterfall in the world. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the world's most notable fresh-water transportation routes. In addition to the Great Lakes there are many other remarkably large lakes; the eleven following, with their areas in square miles in parentheses, are all over 1,000 square miles in area: Great Bear (11,660), Great Slave (11,170), Winnipeg (9,398), Athabaska (3,058), Reindeer (2,444), Winnipegosis (2,086), Manitoba (1,817), Dubawnt (1,600), Nipigon (1,870), Southern Indian (1,200), Lake of the Woods (1,346). Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer lake in Saskatchewan, there are 7,500 lakes. Table 4 gives a list of the principal lakes of Canada, by provinces, with their elevations in feet and their areas in square miles.

4.—Areas and Elevations of Principal Canadian Lakes, by Provinces.

Note.—In the case of those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

¹ Areas are approximate.

It is noteworthy that the greater part of the Dominion drains into Hudson bay and the Arctic ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of the West, but, otherwise, the rivers run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave lake is, with its headwaters, the longest river in Canada (2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic ocean. From Fort Smith, on the Slave river, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates all others and has undergone the greatest development. The St. Lawrence river and the Great Lakes provide a water route from the Atlantic as far as Fort William and Port Arthur, twin cities situated on lake Superior and only 419 miles from Winnipeg, the half-way mark in distance across the Dominion. The main tributaries of the St. Lawrence all flowing south (most of which have lakes available for reservoiring), together with the main river itself, have developed and undeveloped water powers whose economic value it would be difficult to over-estimate. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country, as may be seen by reference to the water-power map at the beginning of Chapter XIII. Table 6 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

* Drainage basins classified according to Dominion Water and Power Bureau, Department of Mines and Resources.

6.—Lengths of Principal Rivers and Tributaries in Canada.

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic ocean, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Arctic islands are of vast extent, Baffin, Victoria, and Ellesmere, the three largest, being approximately 201,600, 80,450, and 75,024 square miles in area, respectively, but Banks, Devon, Somerset, Prince of Wales, Melville, and Axel Heiberg are each larger than Prince Edward Island; Southampton, another very large island, lies just within the wide mouth of Hudson bay. Their economic potentialities, beyond deposits of coal and other minerals, have not been fully established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering, and fishing industries of the West, and together with the bold and deeply indented coast-line provide a region for scenic cruises rivalling those of Norway.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the island of Cape Breton (an integral part of Nova Scotia), Anticosti and the Magdalen group (included in the province of Quebec), and the islands of Grand Manan and Campobello (part of the province of New Brunswick) in the bay of Fundy. Prince Edward island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture on Prince Edward island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin island and the Georgian Bay islands in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

PART II.—GEOLOGY.

Section 1.—Geology of Canada.*

In the section on Orography, pp. 8-10, the physical features of Canada have been considered and the natural divisions have been briefly described. These physiographic divisions depend fundamentally on underlying differences of geological structure and hence are geomorphic ones as well as physiographic. A description of the geology of Canada hence involves an account of the geology of each of these divisions. They are shown in the map on p. 17 and include:—

(1) The Canadian Shield, a vast V-shaped area of ancient rocks surrounding Hudson bay.

(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence river and extending westward through southern Ontario to lake Huron. It is underlain chiefly by flat or gently dipping strata of Palaeozoic age.

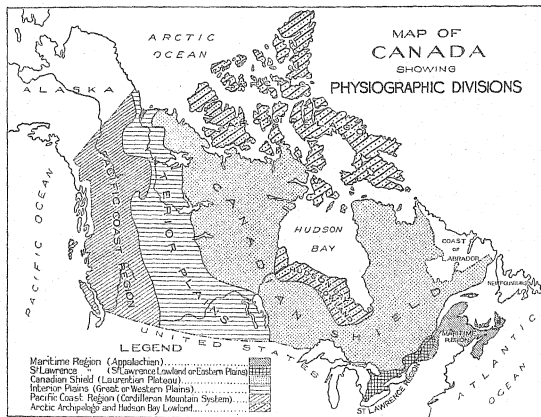

(3) The Appalachian and Acadian Regions, comprising the Maritime Provinces and most of that part of Quebec lying south of the St. Lawrence river. It is a hilly or mountainous region and is made up largely of disturbed beds.

(4) The Arctic Archipelago, with which is linked the Hudson Bay Lowland. The former includes the islands lying north of the Canadian Shield, while the latter is a broad, flat region, underlain by flat-lying Palaeozoic beds.

* By F. J. Alcock, Ph.D., Mines and Geology Branch, Department of Mines and Resources, Ottawa.

(5) The Interior Plains Region of Manitoba, Saskatchewan, and Alberta, which stretches down Mackenzie valley to the Arctic ocean. It is underlain by only slightly disturbed Paleozoic and Mesozoic strata.

(6) The Cordilleran Region, including the mountainous country of the Pacific coast which is developed on highly disturbed rocks.

The following geological time scale will assist the reader by showing the relationship of the various formations mentioned in this article to the geological map which faces p. 26.

The Canadian Shield.—Comprising an area of nearly two million square miles, or more than one-half of the whole of Canada, this plateau-like region rises only locally to more than 1,500 or 2,000 feet above sea-level, except in Labrador where altitudes up to 5,000 feet are reached in certain places. Its most characteristic feature is its low relief. Standing anywhere on an elevation an even skyline meets the eye in every direction. Throughout most of the region the hills and ridges rise no more than 100 or 200 feet above the level of the adjacent lakes and valleys. In places, however, as locally along the southern margins of the Shield and in northeastern Quebec along the Labrador border, the relief is considerably more rugged. Though the general relief is low, the region in detail has a very irregular topography consisting of low, hummocky hills and ridges separated by depressions which are commonly occupied by lakes or muskegs. Lakes of all sizes and shapes, and containing numerous islands, dot practically the entire area, in places giving the appearance of a drowned area with only the ridge tops appearing. The rivers as a rule are mere successions of lake expansions connected by stretches in which rapids and waterfalls are numerous.

The rocks of the Shield are mainly of Precambrian age. They form a continental mass which in Precambrian time extended out in all directions beyond the present limits of the Shield. During the succeeding Palæozoic and Mesozoic Eras the Shield was many times at least partly flooded by seas which advanced over it and later retreated. The sediments that accumulated in these seas were largely swept away by later erosion.

From the beginning of the Cambrian period on to the present, the Shield has been a stable mass. During this time it has suffered vertical movements at intervals but it has been unaffected by any folding or mountain-building deformation. Its earlier or Precambrian history, however, was very complex and included periods of volcanism, sedimentation, folding, mountain-building, and igneous intrusion, and also long intervals of quiescence in which erosion was the active process.

Precambrian time can be conveniently divided into two major divisions, the Archæan or early Precambrian and the Proterozoic or late Precambrian. The Archæan in turn falls into two subdivisions, in the earlier of which volcanism took place on a tremendous scale and lavas and tuffs, usually referred to as Keewatin, accumulated over wide areas in thicknesses measured in thousands of feet. With the volcanics are locally associated sediments, in many places altered to mica schists and gneisses. In the Rainy Lake region of western Ontario a thick succession of such sediments, known as the Couchiching series, lies below the Keewatin lavas. In northern Manitoba and Saskatchewan interbedded lavas and sediments of probably similar age are referred to as the Wekusko group. In eastern Ontario and southwestern Quebec a thick series composed of limestone, quartzite, and sedimentary gneiss, known as the Grenville series, is also usually regarded as having been deposited during this first part of the early Precambrian Era. This period was terminated by widespread but gentle folding movements accompanied by some intrusions of granite.

During the second period of the early Precambrian, a thick formation of clastic sediments was deposited. These are commonly referred to in northern Ontario and Quebec as the Timiskaming series. In northern Manitoba and Saskatchewan similar sediments apparently occupying a corresponding stratigraphic position are referred to as the Missi series. Certain series of sediments, such as the Sudbury of the

Sudbury region, the Doré at Michipicoten, the Ridout of the Woman River area, and others, are of disputed age being regarded by some geologists as Timiskamian and by others as belonging in the Keewatin. The period of Timiskamian sedimentation was succeeded by a mountain-building revolution which was accompanied by widespread intrusion of granite, commonly referred to as the Algonian batholiths. The time of the Algonian intrusions was a great mineral-forming epoch. Most of the gold ores of the Shield, and the copper-zinc sulphide replacement deposits, such as those of Noranda, Flin Flon, Sherritt-Gordon and many others, were formed at this time from mineralizers given off by these intrusives. A long period of quiescence followed in which erosion reduced the region to one of low relief.

The Proterozoic or late Precambrian included the long era during which thick series of sediments were deposited on this eroded complex of Archæan rocks. These strata are best developed in the region around lake Superior and north of lake Huron. They belong to two systems, an older known as the Huronian and a younger called the Keweenawan. North of lake Huron the Huronian strata consist of an older series called the Bruce—made up of conglomerates, quartzites, and impure dolomitic limestone, totalling in thickness up to 12,000 feet—and a younger series named the Cobalt—made up of boulder conglomerate and other materials of probable glacial origin, overlain by quartzite and slightly calcareous quartzite, the whole having a thickness up to 10,000 feet. These two series are separated by an unconformity but the time interval represented was probably not great. The beds for the most part lie with only gentle dips except on the north shore of lake Huron and eastward where they stand at high angles as a result of mountain-building movements. The Huronian rocks are intruded by dykes and sills of quartz diabase extending over wide areas of northeastern Ontario. These intrusions of what is called the Nipissing diabase attracted the silver-cobalt camp of Cobalt, and subsidiary camps. Copper is associated with this diabase in the western part of the region. The Huronian rocks are cut by masses of Killarney granite intruded during the mountain-building period at the close of the Huronian to which reference has been made, and both the Huronian sediments and the Nipissing diabase are cut by small masses of a younger granite which is rich in alkalies.

At Sudbury a series of volcanic and sedimentary rocks filling the basin of the nickel irruptive is known as the Whitewater series. It has usually been referred to as Upper Huronian. The nickel-bearing irruptive was intruded at the base of this series as a saucer-shaped sill or laccolith, 37 miles long and 17 miles wide. It differentiated from norite at the base to micropegmatite at the top. This intrusive is the source of the nickel-copper ores of the region, the deposits occurring along the outer margins of the mass or in offsets where the mass injects the surrounding rocks. Cutting all these rocks are trap and olivine diabase dykes.

North of lake Superior is a group of late Precambrian rocks which has been described under the term Kaministiquian. The group includes the Animikie series of conglomerate, iron formation, and shale; the Sibley series of conglomerate, sandstone, limestone, and tuff; and the Osler series of lavas, conglomerate, sandstone, and tuff. Strata resembling the Animikie rocks of the Lake Superior region also occur in the central part of Ungava peninsula and on the Belcher islands and the east coast of Hudson bay.

In the Northwest Territories a group of Proterozoic rocks known as the Great Slave group consists of sediments and volcanics and rests on an old erosion surface crossing granitic intrusives and the upturned edges of Archæan sediments. The group consists of a lower part made up of conglomerate, sandstone, quartzite, shale,

iron formation, limestone, tuff, agglomerate, andesite, and dolomite, and an upper part of dolomite, shale, limestone, sandstone, and lavas with interbeds of argillite. Still farther north in the Bathurst Inlet region of the Arctic coast are Proterozoic strata. Resting on granite is the Epworth dolomite which has a thin basal conglomerate and grades up through arkose into a cherty dolomite. Above this is the Kanuyak formation, made up of fine-grained calcareous tuffs and tuff-conglomerates, which at one place shows a structural unconformity with the Epworth beds. A still younger formation is the Goulburn quartzite which contains rounded fragments apparently of the Epworth and Kanuyak. The next younger rocks are those of the Coppermine River series to which reference will be made later.

The Keweenaw, the later division of the Proterozoic, saw the accumulation of great thicknesses of clastic deposits, in places accompanied by volcanic rocks, over various parts of the Shield. The type area is on the south side of lake Superior where thousands of feet of sediments and lavas are exposed. On the Canadian side several smaller areas occur on the east coast of lake Superior.

In the northwestern part of Canada are wide areas underlain by flat-lying or only gently dipping beds which are regarded as late Precambrian in age and are commonly correlated with the Keweenaw. The beds consist for the most part of sandstone and arkose with some conglomerate and shale. South of lake Athabaska is a broad area of these rocks to which the term Athabaska series has been applied. Smaller patches also occur north of the lake and to the northeast is another considerable area along the Dubawnt river. Interbedded basaltic flows and diabase dykes occur in places with these rocks. On Great Slave lake the Et-then series of clastic sediments is considered to be of equivalent age, while farther north on the Coppermine river and at Bathurst inlet a series of interbedded sediments and volcanics is known as the Coppermine River series. It carries notable copper deposits. Trap dykes, commonly considered as Keweenaw in age, are of wide occurrence over the entire Shield and are the youngest of the Precambrian rocks.

During the Pleistocene or Glacial period, the Shield was heavily glaciated by huge glaciers of continental extent. One of these sheets had its gathering ground west of Hudson bay and another in the heart of Labrador. From these centres the ice moved out in all directions. In its advance it scoured off the residual soil, smoothed down the topography, polished and striated the rock surface, and by scattering debris irregularly over the surface completely disorganized the drainage. The result was the formation of the numerous lakes which are everywhere so characteristic a feature of the region. On the retreat of the glaciers, large temporary lakes stood in places in front of ice and in these accumulated clay and other fine stratified deposits forming what are known as clay belts.

The Canadian Shield is a great store-house of mineral wealth and hence offers an attractive field to the prospector. It is not because its rocks are of Precambrian age that such is the case. It is rather because parts of it offer geological conditions favourable for the occurrence of minerals. Ore deposits the world over have, for the most part, resulted from mineralizing solutions given off from masses of igneous rocks during the late stages of their intrusion and cooling, and where we have an association of older rocks invaded by intrusives we may expect to find mineralization, no matter what age the rocks may be. During the Precambrian the rocks of the Shield, as has already been mentioned, were extensively invaded from time to time by intrusive masses of composition varying from acid to basic. Reference has been made to the nickel-copper deposits associated with the Sudbury irruptive, the silver-cobalt ores occurring with the Nipissing diabase, the gold deposits of Ontario

and Quebec associated with porphyry and other granitic rocks. The gold-bearing copper ores of western Quebec, the zinc-copper ores of northern Manitoba, the pitchblende and silver deposits of Great Bear lake are other important mineral occurrences which are being developed. In eastern Ontario and western Quebec, where granite has intruded limestone and other sediments of the Grenville series, occur deposits of mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc, apatite, and other minerals.

The St. Lawrence Region.—The St. Lawrence Region is a lowland which stretches westward from Quebec city for a distance of some 600 miles to lake Huron. It begins as a narrow strip bordering either side of the St. Lawrence and gradually widens until at Montreal it has a width of 120 miles. Its northerly border continues on up the Ottawa river but 50 miles west of Ottawa the belt is interrupted by a projection of the Canadian Shield known as the Frontenac axis which extends southward crossing the St. Lawrence between Kingston and Brockville. West of this axis the lowland occupies a triangular area lying between lakes Ontario, Erie, and Huron and an east and west line drawn from Kingston to the south end of Georgian bay. This western part in turn falls into two divisions separated from each other by a prominent topographic feature, the Niagara escarpment, an abrupt, eastward-facing rise of 250 to 300 feet, extending from Niagara river in a northwest direction to Bruce peninsula. Still farther to the northwest, the escarpment is continued by the northward-facing cliffs of Manitoulin and adjacent islands.

The St. Lawrence Region is underlain by Palaeozoic strata ranging in age from late Cambrian to late Devonian. For the most part the beds lie flat or at low angles. In places, however, as in southwestern Ontario, they are folded into broad low domes and elsewhere, as in the vicinity of Ottawa, they are traversed by faults of considerable magnitude. In general the beds dip away from the Canadian Shield so that as one proceeds in a direction leaving the Shield, progressively younger strata are encountered.

The strata are almost wholly of marine origin and were deposited in seas that spread out over a large part of the continent. Differential movements caused these seas to advance and retreat, so that the sediments which were deposited in them vary considerably. There are also local gaps in the sedimentary sequence caused by these movements but the movements were so gentle that there are no angular unconformities.

The oldest of the Palaeozoic formations is the Potsdam sandstone of Upper Cambrian age. It is followed by a thick succession of Ordovician strata. In the Ottawa-Montreal region these beds have a thickness of about 6,000 feet and are the youngest measures there are. They include Beekmantown or early Ordovician dolomitic limestones, Chazy sandstones, shales, and limestones, Black River limestone, and Trenton limestone deposited during the Middle Ordovician, and Upper Ordovician beds made up of the Utica shale, Lorraine shales with limestone and sandy layers, and the Richmond group of shales and limestones. The Lorraine and Richmond rocks are developed chiefly southeast of the St. Lawrence.

West of the Frontenac axis and east of the Niagara escarpment, the middle division of the St. Lawrence Region is also underlain by Ordovician strata. Along the escarpment these beds are succeeded by Silurian measures of which the lowest group is the Medina composed of sandstone, shale, and shaly limestone. These beds are succeeded by shales and limestones of the Clinton group which in turn are followed by the Rochester shale and Lockport dolomite of the Niagara group. Above the Lockport is the Guelph dolomite and this in turn is overlain by the Cayuga

group made up of the Salina formation and the lower Munroe dolomite and shale. The total thickness of the Silurian measures is around 1,750 feet.

The Cayugan beds are terminated by an erosion surface upon which rest Devonian beds about 1,000 feet in thickness. The succession from bottom to top is as follows: Sylvania sandstone, Upper Munroe dolomite, Oriskany sandstone, Onondaga limestone, Delaware limestone, Hamilton limestone and shale, Huron shale, and Port Lambton shale.

The only intrusive rocks of the St. Lawrence Region occur in the eastern part in what are known as the Monteregian hills. These are eight in number occurring along an approximately east and west line some 50 miles long. The most westerly is Mount Royal at Montreal. The hills are circular or oval in outline and rise abruptly to elevations of from 600 to 1,200 feet above the surrounding flat country. The flanks of the hills consist of altered and hardened sediments and the centres are composed of intrusive rocks, including various alkali types such as nepheline syenites, essexites, etc. The age of these intrusives may be as late as Pliocene.

The whole region was overrun by Pleistocene ice sheets and much of the bed-rock is covered by debris left by these glaciers. At Toronto stratified deposits carrying plant and animal remains lie between deposits of glacial material. These layers show that the region was crossed at least three times by ice sheets coming from central Ungava and that between these advances the region had a climate considerably milder than the present. In late Pleistocene time the region was depressed and an arm of the sea extended up the St. Lawrence valley as far at least as Brockville and up the Ottawa River valley beyond Ottawa. At Ottawa the sea stood at least 688 feet above its present level. In this sea, layers of clay were deposited and along its shores deposits of sand accumulated. Eventually uplift of the land caused the withdrawal of this sea to which the name Champlain is given.

The chief mineral occurrences of the St. Lawrence Region include petroleum and natural gas which are produced in southwest Ontario, salt from the counties bordering lakes Huron and St. Clair, and gypsum from the Grand River valley. Other materials which are available at many places include limestone and dolomite used in chemical and metallurgical industries, rock for construction purposes and clay for brick, tile, and cement manufacture.

Appalachian and Acadian Regions.—The Appalachian and Acadian Regions include that part of Canada lying south of the St. Lawrence river and east of a line running from Quebec city south to the foot of lake Champlain. The Appalachian Region, whose eastern boundary in Canada is the Restigouche river and Chaleur bay, is a continuation of the Appalachian Mountain system of the eastern United States. The Acadian Region lies to the southeast and comprises the provinces of New Brunswick, Nova Scotia, and Prince Edward Island.

The region is for the most part mountainous or hilly. In southeastern Quebec the Notre Dame mountains, consisting of three roughly parallel ridges trending northeast, reach elevations up to 3,100 feet and in Gaspé peninsula, the Shickshocks, actually a continuation of the same range, have heights up to 4,200 feet. Many of the mountain summits are flat-topped, showing that the region is really a dissected plateau. The Acadian Region is also largely one of plateaux, ridges, and valleys. In central New Brunswick is a rugged area with summits rising over 2,000 feet. To the east of this is a lowland area of some 10,000 square miles comprising the eastern portion of the province and all of Prince Edward Island. It nowhere rises over 600 feet above the sea. Nova Scotia is largely an upland region which in the northern part of Cape Breton island reaches elevations of 1,500 feet.

The rocks of the Appalachian and Acadian Regions include sediments, volcanics, and intrusives, chiefly of Palaeozoic age. In a few places rocks of Precambrian age are known and along the Bay of Fundy coast are a few areas underlain by Mesozoic rocks. The lowland area of eastern New Brunswick is underlain by little disturbed Carboniferous beds. Elsewhere, however, throughout the region, the rocks are nearly everywhere thrown into folds with axes trending in a northeast direction and are in addition broken by faults giving rise to a complex structure typical of the Appalachian Region in general. The chief period of deformation in this part of Canada, however, was during the Devonian, whereas to the south, in the United States, the greatest disturbances took place later during the Permian at the close of the Palaeozoic.

At Saint John city in southern New Brunswick is exposed a series of early Precambrian rocks made up of limestone, dolomite, quartzite, and gneiss. It is overlain by a thick succession of late Precambrian volcanic rocks upon which rest Cambrian strata. Precambrian rocks also occur in Cape Breton island. In Gaspé peninsula along the north side of Chaleur bay the Macquereau series, composed largely of quartzite, rests unconformably below Ordovician strata and may be Precambrian. Precambrian rocks have been described as occurring in central New Brunswick and in southwestern Quebec. Some of the occurrences are probably, however, of Palaeozoic age.

In the mainland of Nova Scotia a thick series of altered sediments, known as the Meguma or Gold-bearing series covers wide areas and is believed to be of late Precambrian age. The lower half of its 35,000 feet thickness consists dominantly of quartzites and the upper half of slates. The series is folded along northeast lines and is broken by northwest faults, the horizontal displacement of some of which exceed a mile. The rocks are intruded by dykes and sills of diabase and by batholithic masses of grey and red granites of Devonian age.

Cambrian formations occur in southeastern Quebec, in southern New Brunswick, and in northeastern Cape Breton. In early Ordovician times sediments were deposited in the St. Lawrence River Region. The Sillery formation of red and green shales with interbedded sandstone has at Quebec a thickness of 2,000 feet. A younger series, called the Lévis, consists of dark shales and thin-bedded limestones with a thickness of possibly as much as 5,000 feet. It forms a band varying in width from 6 to 35 miles; its beds have been folded, faulted, and in places overturned. Mid-Ordovician rocks occur in southwestern Quebec and in Gaspé and northern New Brunswick. Late Ordovician rocks are developed in the Matapédia River and Chaleur Bay districts. At the close of the Ordovician there were extensive mountain-building movements. Masses of peridotite which intrude the Ordovician and older rocks may have originated at this time.

Silurian rocks are exposed in southeastern Quebec, in Gaspé, in New Brunswick, and in Nova Scotia at Arisaig and a few other places. The next marine invasion was in Lower Devonian time when great thicknesses of sediments with interbedded volcanics accumulated in New Brunswick and Gaspé. During the Middle Devonian, a thick series of sandstones accumulated in Gaspé. In the Upper Devonian was deposited in the vicinity of Maguasha in the Gaspé coast a group of conglomerates, sandstones, and shales, one member of which is noted for the fossil fish it has yielded. Towards the close of the Middle Devonian, the whole Appalachian and Acadian Regions were affected by mountain-building movements accompanied by the intrusion of batholithic masses of granite.

Rocks of Carboniferous age underlie the lowland belt forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of the Cobequid mountains, part of the lowland south of these mountains, southwestern and north-eastern Cape Breton island and all of Prince Edward island. With the Lower Carboniferous or Mississippian rocks occur the extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick and also the bituminous shales of these provinces. The Upper Carboniferous or Pennsylvanian strata contain the coal measures which occur at Sydney, and at other places in Nova Scotia and at Minto in New Brunswick. The Carboniferous beds have in places been folded and faulted but there are wide areas in which the strata have been but little disturbed since they were deposited.

Red sandstones deposited during the Triassic period are exposed in a number of small areas along the Bay of Fundy coast. In places as at North Mountain, Nova Scotia, the beds are accompanied by lava flows. During the Pleistocene the region was glaciated. At certain stages there were apparently local gathering grounds for glaciers in central New Brunswick and in central Gaspé.

The chief mineral deposits of the Appalachian and Acadian Regions include coal, asbestos, and gypsum. The coal and gypsum, as has already been mentioned, occur in the Carboniferous measures. Asbestos occurs in serpentinized peridotite in southeastern Quebec. Chromite also occurs with the peridotite. Gold occurs in quartz veins in the Gold-bearing series of Nova Scotia. Many of the deposits are located on domes or pitching anticlines. Zinc-lead deposits occur in central Gaspé in veins cutting lower Devonian beds. At Stirling in the southern part of Cape Breton island, zinc, lead, and copper sulphides occur in a series of volcanic rocks. Copper and iron pyrite deposits occur in southern Quebec. Salt occurs in Nova Scotia and New Brunswick.

The Arctic Archipelago and Hudson Bay Lowland.—The Arctic archipelago includes the islands lying north of the Canadian Shield. They have a land area of over half a million square miles. Save for northward extension of the area of the rocks of the Canadian Shield, the islands for the most part are a series of plateaux formed of gently dipping strata.

The main Precambrian belt extends through Baffin island to Ellesmere island. Its rocks consist chiefly of granite and granite-gneiss intrusive into various types of gneisses and schists. Palaeozoic strata, including Cambrian, Ordovician, Silurian, Devonian, and Carboniferous beds, cover most of the remaining area. Triassic rocks occur on the Sverdrup islands and a number of areas are underlain by Tertiary beds some of which are coal-bearing. Coal is also associated with some of the Upper Carboniferous strata at a number of places.

The Hudson Bay Lowland bordering the west side of Hudson bay has a length in a northwest direction of 800 miles, a width of from 100 to 200 miles and an area of 120,000 square miles. It rises from sea-level with a scarcely perceptible gradient to a height of about 400 feet. It is underlain by flat-lying rocks most of which are of Palaeozoic age ranging from Ordovician to Devonian. An area of Mesozoic beds carrying lignite occurs in the Moose River region.

The seas in which the Palaeozoic rocks which are now exposed in the Arctic Archipelago, the Hudson Bay Lowland, and the St. Lawrence Region were deposited extended at times widely over the Canadian Shield. Palaeozoic outliers are known on lake St. John, lake Nipissing, and lake Timiskaming in the south, and on lake Nicholson west of Hudson bay. These outliers are mere remnants which have survived the erosion of Mesozoic and Tertiary time.

The Interior Plains.—The Interior Plains division of Canada is part of a great plains region in the interior of the continent stretching from the gulf of Mexico to the Arctic ocean. In Canada it extends from the Canadian Shield on the east to the Cordillera on the west. At the United States border it has a width of 800 miles but in the extreme northwest at the mouth of the Mackenzie river it is less than 100 miles wide. Throughout most of the region the underlying Palæozoic, Mesozoic, and Tertiary rocks are nearly flat-lying. In the northwestern part of the area, however, the Franklin range, which lies between Great Bear lake and Mackenzie river, is composed of folded strata. In western Alberta, also, the rocks are folded and faulted.

Geologically the region falls into three zones. On the east a narrow plain known as the Manitoba lowland is developed on flat-lying Palæozoic strata which range in age from Ordovician to Devonian. In Manitoba the Ordovician beds rest on the Precambrian rocks of the Canadian Shield and commonly present a low escarpment facing the Shield. To the northwest this zone broadens to form the Mackenzie lowland. Here over wide areas Silurian measures form the base of the Palæozoic section. In the Franklin mountains, however, red quartzites and sandstones of the Mount Clark formation are regarded as of probable Lower Cambrian age. They are succeeded by Middle and Upper Cambrian sandstones and shales. Beds regarded as of probable Ordovician age are also known to occur at the base of Mount Kindle east of Wrigley and beneath the Silurian dolomite of the Great Slave Lake area. Over considerable areas strata of Cretaceous age also occur in the Mackenzie lowland region, as for example on Liard river, on the western shores of Great Bear lake, and at several places along the Mackenzie. At the mouth of Bear river is an area covered by partly consolidated Tertiary sands and clay carrying lignite beds.

The second zone includes much of southwestern Manitoba and southern Saskatchewan and Alberta. It is a broad belt underlain by Cretaceous rocks. Its eastern border, where these strata overlap the underlying Palæozoic sediments, is an abrupt rise known as the Manitoba escarpment. Its surface gradually rises from an elevation of from 1,000 to 2,000 feet at the escarpment to from 4,000 to 5,000 feet at the border of the mountains on the west.

The third zone consists of the plateaux of Wood mountain and the Cypress hills which rise up to elevations of 1,000 feet above the level of the surrounding region. They are composed of flat-lying beds of Tertiary age.

In Pleistocene time glacial drift was widely scattered over the region. On the retreat of the ice deposits, clay accumulated in lakes which stood in front of the waning ice sheet. Much of southern Manitoba formed the bed of glacial lake Agassiz.

The Interior Plains Region is the great wheat-producing area of Canada. Coal mining is an important industry. Bituminous coal and lignites are produced in large quantities in Alberta and in small amounts in Saskatchewan from Cretaceous and Eocene beds. Natural gas is produced in large quantities from various horizons of the Cretaceous in Alberta. Petroleum has been found in the Devonian beds of the lower Mackenzie valley north of Norman, in Cretaceous strata at a number of localities in Alberta, and in Palæozoic rocks in Turner valley. Along the Athabaska river the basal member of the Lower Cretaceous, known as the McMurray or the Tar sands, is heavily impregnated with bitumen. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs in northern Alberta. Deposits of lead and zinc occur in Devonian limestones at certain places south of Great Slave lake.

The Cordilleran Region.—The Cordilleran Region comprises the mountainous country bordering the Pacific ocean. The part of it which lies in Canada has an average width of 400 miles, a length in a northwest direction of 1,500 miles, and an area of 600,000 square miles. It is made up of three principal zones. On the east is the Rocky Mountain range; along the coast is a broad belt of mountains known as the Coast range, while between these two lies a third or intermediate belt made up of plateaux and mountain ranges. The Rocky mountains have a maximum width of 100 miles and have many peaks with elevations of from 10,000 to 12,000 feet. The Coast range, varying in width from 50 to 100 miles, rises abruptly from the coast to peaks which along the axis of the range reach elevations of from 7,000 to 10,000 feet. The interior plateau and mountain belt is represented in the north by the Yukon plateau, a gently rolling upland broken into a series of flat-topped ridges by valleys several thousand feet deep. In the southern part of British Columbia the interior region is a plateau rising 3,000 to 4,000 feet above sea-level and cut by valleys a thousand or so feet in depth. To the west this plateau either joins the Coast range directly or else is separated from it by the Cascade range and other mountains. To the east between the plateau and the Rocky mountains are a series of ranges separated by northwest-trending valleys. The Selkirk range with peaks over 11,000 feet is the most important of these.

The rocks of the Cordilleran Region range in age from Precambrian to Recent. The Rocky Mountain belt is composed of great thicknesses of Precambrian, Palaeozoic, and Mesozoic sediments, in most places unaccompanied by plutonic or volcanic rocks. The Coast range is essentially a complex batholith of granite of late Jurassic or early Cretaceous age cutting and enclosing sediments and volcanic rocks of earlier Mesozoic age. The interior belt of plateaux and mountain ranges is underlain by Palaeozoic, Mesozoic, and Tertiary sediments and volcanic rocks. The pre-Tertiary beds are cut by numerous bodies of plutonic rocks and in several districts strata of Precambrian age are exposed.

The geological history of the Canadian Cordilleran Region may be briefly summarized as follows: In Precambrian time sediments which now are in the form of limestones, gneisses, and schists were deposited in the interior belt. In Yukon these strata are known as the Yukon group and in central British Columbia as the Shuswap group. These have been altered by intrusive rocks and included with them may be metamorphosed phases not only of Precambrian rocks but also of much later rocks. In late Precambrian time a thick series of argillites and related sediments accumulated on the site of the southern Rockies and farther west in the region now occupied by the Purcell mountains. The Purcell series, consisting dominantly of quartzites, has a thickness of over 20,000 feet.

From the Cambrian to the Carboniferous, sedimentation progressed in the Rocky Mountain and Purcell region. Cambrian strata are best known in the Bow and Kicking Horse valleys along the main line of the Canadian Pacific railway, where a total thickness of more than 18,000 feet of Cambrian beds are exposed. Another thick section can be seen in the Mount Robson district along the Canadian National railway. In both these areas the Cambrian beds are succeeded by Ordovician strata. Silurian limestone occurs south of Kicking Horse river, in Yukon, and in the western part of Mackenzie mountains. In Devonian time the whole eastern Cordilleran Region was submerged and calcareous beds, in places several thousand feet thick, were deposited. In the western part of the Rocky mountains they in places succeed Silurian beds but in the south and at various places in the eastern part of the Rockies they rest on late Precambrian or Cambrian strata. Carboniferous beds succeed the Devonian strata at many places in the Rockies.

Around Banff they include a thickness of 5,000 feet. In the interior belt around Kootenay lake Carboniferous beds rest directly on Precambrian rocks.

During the Triassic and Jurassic, sedimentation and volcanism on a vast scale occurred in the region from the Rocky mountains westward to the Pacific ocean, and on the site of what are now Vancouver island and the Queen Charlotte islands. In late Jurassic and early Cretaceous times this whole region was deformed. The Selkirk and Coast ranges were produced and the Coast range batholith was intruded. In later Cretaceous time, sediments were deposited on both sides of these Jurassic ranges.

Long continued erosion in late Cretaceous time reduced the mountains to a peneplain and unroofed their granite cores. During the Eocene occurred the great Laramide revolution which produced the Rocky mountains. The rocks of this belt were folded and faulted and in places great blocks of older rocks were thrust over younger beds. Local intrusions of igneous rock accompanied the deformation. In the Oligocene local movements accompanied by igneous intrusions again took place. During the Miocene period great fissure eruptions took place while during the succeeding Pliocene period there was further volcanism with general uplift and subsequent valley cutting. In the Pleistocene or Glacial period most of the Cordilleran Region with the exception of some of the higher ridge tops was covered by what is known as the Cordilleran ice sheet. The whole region was depressed at this time but in post-glacial time there has been uplift ranging from 450 to 1,000 feet.

The Cordilleran Region is a great mineral area. Most of the deposits are related to the Coast Range batholith. They occur principally along the borders of the batholith and in the older rocks surrounded by the intrusives and were produced by mineralizing solutions given off from the igneous masses. Some of the more important deposits are the copper ores of Hidden Creek, Britannia, and Allenby mountain, the gold-silver deposits of Salmon River district, the silver-lead-zinc ores of the Slocan, and the Sullivan ore body, the largest silver-lead-zinc mine in the world. Other mineral deposits include coal which occurs in the Rocky mountains and on Vancouver island in beds of Cretaceous and also of Tertiary age, iron ores on Vancouver and Queen Charlotte islands, placer gold in Yukon and in the Cariboo country in gravels of Tertiary age, and numerous other mineral occurrences.

Section 2.—Economic Geology.

An article on this subject, prepared by F. J. Alcock, Ph.D., Mines and Geology Branch, Department of Mines and Resources, Ottawa, appeared at pp. 16-28 of the 1937 Year Book.

PART III.—SEISMOLOGY IN CANADA.*

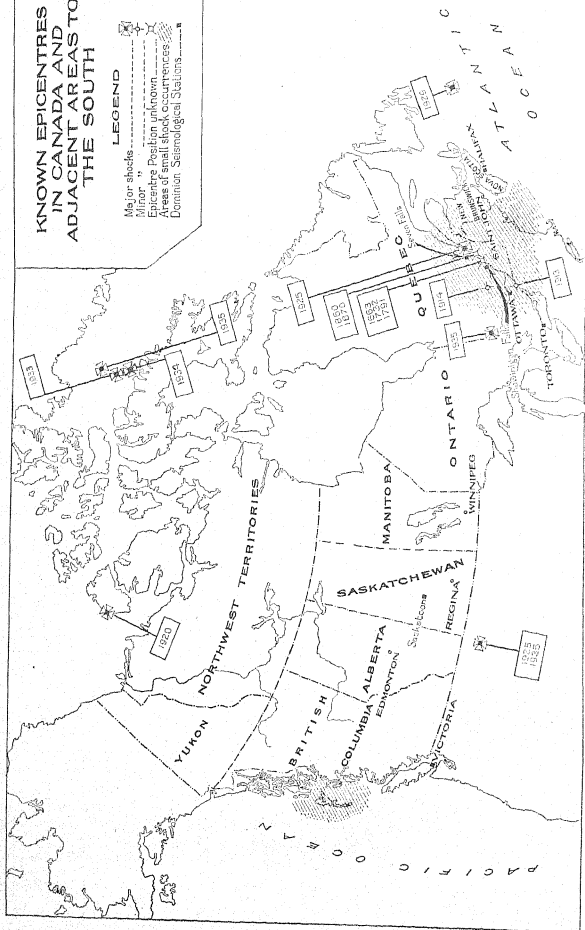

Seismology—that branch of science which treats of earthquakes—has received considerable attention in Canada during recent years. It has been generally recognized that earthquakes are frequent in regions of adjustment of strata and are characteristic of the newer mountain and coast regions where steep level-gradients occur. The energy radiated from an earthquake in the form of elastic waves in the earth is, however, recorded on sensitive seismographs up to great distances, even to the antipodes of the earthquake. Seismological researches, while regularly recording the routine statistical data regarding earthquakes, seek also to determine particular causes. Moreover, they endeavour to ascertain the physical properties

of the earth's crust and interior as revealed by the peculiarities in the *time-distance curves* for earthquakes.

A time-distance curve, as its name implies, shows the relation between the areal, surface distances from the origin of the earthquake to the various recording stations and the elapsed time required for the initial impulses and their various reflections to reach each station from the origin concerned. Of late years, these time-distance curves have been greatly improved. It may be said that their further improvement must be through taking account of the depth of the origin—the *focal depth*. The point within the earth from which the energy of an earthquake is liberated is called the *focus*; the point vertically above the focus, on the surface, the *epicentre*.

The records of seismographs within five hundred miles of an earthquake are used to determine the epicentre, focal depth, and focal time. These same stations, together with the others at distances up to the antipodes of an earthquake, are used to determine arrival times for making up the time-distance curves. The curves themselves are the point of departure for the earth's crust and deep interior.

Previous to the beginning of the present century, seismological records for Canada are mostly to be found in historical documents. Such are our only reports of a great earthquake which disturbed Eastern Canada from above Montreal to below Quebec during the first part of the year 1663. Other earthquakes in Eastern Canada, for which similar records alone are available, occurred in 1732, 1791, 1860, and 1870. In 1925 another earthquake took place in the same region. It was the subject of careful study by the seismological division of the Dominion Observatory and several reports were published. Another, on Nov. 1, 1935, which occurred near Timiskaming, Que., was also carefully studied. It is known that the earthquakes of 1925 and 1935 were felt over wide areas. The former was reported from Duluth to Halifax and from the Arctic to the Carolinas. The latter was felt even farther west and as far south as Virginia. Many smaller earthquakes are experienced in Eastern Canada from time to time. Those previous to 1906 are listed from historical records. The subsequent ones have been recorded on seismographs.

The only other regions of Canada where earthquakes are sometimes experienced are British Columbia and the Arctic. The earthquakes in the west have been mostly centered near the Queen Charlotte islands and, within the brief span during which records are available, none has been severe. A severe earthquake occurred off Banks Island in the Arctic in 1920 and three of great intensity have since been centred in Baffin bay. The first of these occurred on Nov. 20, 1933. It is suspected that many small shocks, recorded on seismographs in Canada, originate in the almost uninhabited regions of the north but this has not, as yet, been established.

Previous to Dec. 1, 1936, two government departments carried on seismological investigations in Canada. Seismological stations were established at Toronto (1897), and at Victoria (1898), each under the auspices of the Meteorological Service. Stations at Ottawa (1905), Halifax (1915), Saskatoon (1915), Shawinigan Falls (1927), and Seven Falls (1927) were established by the Dominion Observatory. The stations at Halifax and at Saskatoon are maintained, respectively, with the co-operation of Dalhousie University and the University of Saskatchewan. The stations at Shawinigan Falls and at Seven Falls are maintained with the co-operation of the Shawinigan Water and Power Company. On Dec. 1, 1936, the Toronto and Victoria stations were taken over by the Dominion Observatory which now has charge of all seismological work—routine and research—being carried on.

The seismographs employed have been improved greatly since the first world chain of stations was established in 1896 by John Milne under the auspices of the British Association for the Advancement of Science. The instruments now used in Canada are Milne-Shaw, Wood-Anderson, and Mainka horizontals; Wiechert, and Benioff verticals. It is planned to modify the Mainka and Wiechert instruments for photographic recording, and electro-magnetic damping; the others are already of that type.

Seismological instruments have been modified for recording the earth tremors sent out by explosives detonated for the purpose of studying the earth structure near the surface (to a depth of about two miles). A technique has been developed for making use of this equipment to trace sub-surface contours. Such information is useful in locating oil deposits and, to a lesser degree, fault zones in which minerals may be found. Some work of this nature has been done in Canada, but only by trained groups of operators hired from companies outside Canada. In some cases the Dominion Observatory has been represented by an observer attached to the group. The officers of that institution endeavour to keep themselves posted as to the developments in this important application of seismology but, as yet, no work of this kind has been developed in Canada.

The Seismological Service of Canada, as now organized, has its central station at Ottawa. The records are developed at the auxiliary stations and sent to Ottawa for reading and the publication of reports. Seismological research is carried on at the Dominion Observatory and international co-operation in seismological work is there arranged.

PART IV.—THE FLORA OF CANADA.*

NOTE.—Bibliographical references are indicated by arabic numerals and run consecutively throughout the article; corresponding notes are listed in the Bibliography at the end, pp. 56 to 59. Textual footnotes to individual pages are indicated by symbols.

The Dominion of Canada extends from Pelee island in lake Erie, a little south of latitude 42°, to the northern end of Ellesmere island in latitude 83°, that is, a distance in a north and south direction of about 2,800 miles. In an east and west direction, the distance from the Atlantic to the Pacific ocean is about 3,000 miles. In a country of such great extent there are naturally wide variations of climate such as the mild, equable, ocean climate of Vancouver island and the southwestern mainland, the warm, temperate climate of the lake Erie region, the dry, interior continental climate with wide extremes of heat and cold of the central prairie regions, and the rigours of the Arctic islands, to mention only a few outstanding variations. As might be expected, the range of flora in such a country is very wide and in the present age of specialized studies it would hardly be possible for one writer to do justice even to the highest group, namely, the seed-plants. If, in addition, cognizance is taken of the various groups of cryptogams—the mosses, fungi, etc.—it will be realized that all that can reasonably be attempted in an article such as this is a summary of some of the more important botanical features of different regions and an indication of what has been accomplished in regard to the study of the distribution in Canada of the various subdivisions of the plant kingdom. Any attempt to explain the origin of the various floral groups in Canada with reference to changes in geological time and to correlate their affinities with the plants of other countries (more particularly with those of the United States, Eastern Siberia, and Arctic Europe) would require specialized knowledge of each group and a much more intensive study of their local and general distribution than has hitherto been achieved.

* Prepared by John Adams, M.A. (Cantab.), Division of Botany, Experimental Farm, Ottawa.

Previous Descriptive Works on Canadian Flora.—The earliest descriptive work on the flora of Canada is that of J. P. Cornuti entitled "*Canadensium Plantarum Historia*", published at Paris in 1635.¹ It is written in Latin and contains a considerable number of figures of the species, many of which, such as *Adiantum pedatum*, *Asarum canadense*, etc., can be recognized readily although the names may be different. It includes, in addition, some species which are not indigenous. As might be expected from the date of publication, definite localities in this country are not specified.

At a much later date (1862) appeared Abbé L. Provancher's "*Flore Canadienne*",² written in French and also containing a number of illustrations. In addition to the native flora, it included descriptions of many plants cultivated in gardens as well as some species of the lower cryptogams, namely, mosses, lichens, fungi, and algæ. But Canada, in the sense used by Provancher, was mostly synonymous with the present provinces of Quebec and Ontario. More recent manuals devoted mainly to the description of the species mentioned, rather than their detailed distribution in Canada, are those by Marie-Victorin,³ Spotton, Cosens, and Ivey,⁴ Hales,⁵ Brown and Schäffer,⁶ and Henry.⁷ The forest trees have been dealt with in an adequate manner by Morton and Lewis.⁸

The first and only work to show the detailed distribution of the native plants throughout the Dominion was John Macoun's "*Catalogue of Canadian Plants*"⁹ published in seven parts at intervals between the years 1883 and 1902. It comprised all groups of the plant kingdom with the exceptions of fungi and algæ. Other sectional lists dealing with a part or the whole of a particular province have appeared from time to time and are referred to in the proper places under their respective floral regions. But for a list of all the important papers on the distribution of Canadian plants published between the years 1635 and 1935, inclusive, reference should be made to the "*Bibliography of Canadian Plant Geography*".¹⁰

FACTORS AFFECTING PLANT LIFE.

Climate.

A full general account of the climate of Canada will be found in Koeppé's work¹¹ on the subject. The maps prepared by Brooks, Connor, and others¹² are also very instructive, while the meteorological reports¹³ form the basis of practically all our knowledge of the subject apart from observations made by explorers. The relation of plants to climatic factors has been dealt with to some extent by Adams¹⁴ and much more fully by Livingston and Shreve.¹⁵ The adaptations of many plants in the Arctic Region to the difficulties of the climate under which they live are briefly described later on in this article at p. 40, while characteristics which aid other plants to withstand arid conditions in certain sections of the prairies are mentioned on pp. 47 and 48.

The study of plants in relation to climate involves consideration of a number of different factors such as temperature, rainfall, snowfall, evaporation, light, wind, humidity, and fog.

Temperature.—For a plant to function properly, a certain range of temperature is necessary. If the temperature is too low the plant may become dormant or may suffer temporary injury or may even be killed. Plants, however, vary greatly in their resistance to cold. As a result of this, the assemblage of species in a northern latitude may be entirely different from that in a region nearer the equator with the production of distinct floral areas. The method usually attempted of

measuring the effect of temperature on plant life is that of recording daily the maximum and minimum. For comparison of different localities a fairly correct idea can be obtained from the mean temperature of the air during the hottest and coldest months, usually July and January, together with the absolute minimum reached during the year. These observations should be supplemented by the minimum temperature of the soil at different depths, but such figures are very rarely obtainable.

Precipitation.—In the absence of water, plant life would cease to exist. Hence rainfall and its frequency are very important factors and both are easily measured. The total rainfall during the chief growing months, that is, from June to September, furnishes a useful basis for comparison of different areas, but rainfall figures alone lose much of their value unless supplemented by the amount of evaporation for which, unfortunately, few records exist. Evaporation from a water surface is, in fact, an index of the combined effect of four other factors, namely, temperature, bright sunshine, wind, and humidity of the air.

Figures of total snowfall are useful, mainly, as providing a basis for estimating the amount of moisture likely to be added to the soil when the snow melts in spring. A snow cover also protects the roots of the plants against excessive minimum temperatures.

Light.—Light varies greatly at different points on the earth's surface, not only in its duration but also in its intensity. During the summer months the duration of daylight in northern latitudes is much greater than in places farther south and, even though the temperature in the former localities may be lower, this is compensated for to a considerable degree in the plant's economy by the longer exposure to light. The same is true of light conditions on the summit of a mountain as compared with the valley at its base, and partly explains why arctic plants occurring at low altitudes above the sea are also often found in alpine situations much farther south. The following examples taken at different latitudes will show how the average duration of diffuse daylight (as distinct from hours of bright sunshine) varies in different localities during the month of June: Fort Vermilion (lat. $58^{\circ} 23'$) 18.2 hours; Prince George (lat. $53^{\circ} 50'$) 16.7 hours; Swift Current (lat. $50^{\circ} 20'$) 16.3 hours; Annapolis Royal (lat. $44^{\circ} 45'$) 15.7 hours; Harrow (lat. $42^{\circ} 02'$) 15 hours.

As there is no simple or easy method of summing up the total daily light factor, the total hours of bright sunshine during the six growing months may serve to some extent to institute a comparison between different places. In this connection the data on the duration of daylight, given in the section on Meteorology at pp. 66 to 68, for places situated between latitudes 44° N. and 52° N., are of importance.

Wind.—Wind is important chiefly in promoting pollination of flowers so that seeds may be set; it also serves for the dispersal of many seeds and fruits over a wider area. Wind promotes evaporation of water from the surface of the soil but, as in the case of air humidity and of fog, it is seldom of more than local importance in the comparison of floral areas.

Altitude.—Altitude above the sea-level has a marked effect on climate and as a consequence on vegetation. Temperature falls about 1° F. for every 300 feet of ascent, while precipitation increases with altitude, taking the form of snow at higher levels. The duration of daylight also increases with altitude and the intensity of the wind is also greater. Owing to the difference in exposure to the sun's rays on

the northern and southern slopes of a mountain, the vegetation at the same level is markedly different. The orographical map facing p. 10 indicates those regions in Canada (confined principally to the western Cordillera, to Gaspe, to the eastern coast of Labrador, and to the Arctic islands) where altitudes are sufficiently great to materially affect vegetation.

Environment.

No very definite line can be drawn between the influences of climate and environment, since climate itself may be the cause of peculiar environmental conditions. Similarly latitude, geology, topography, and altitude all have their effect upon the conditions of vegetation. All these factors cannot be discussed here, but some mention should be made of instances in which certain plants exhibit special characteristics in relation to their environment, such as parasitic plants, climbing plants, water plants, etc. Groups characterized by these peculiar adaptations are discussed briefly below under ecological relationships.

In the course of the agricultural settlement of Canada and the development of trade with other parts of the world during the past three centuries, many forms of plant life not originally present in Canada have been introduced either intentionally or accidentally, and many of these forms have been able to so adapt themselves to conditions in various parts of this country that they have become established under natural conditions of reproduction. Such plants are briefly treated on pp. 34 and 35, under exotic flora.

Ecologic Relationships and Groups.*—Any account of the Canadian flora which did not contain a brief description of those groups of plants which stand in a peculiar relationship to environmental conditions would be lacking in completeness. Such ecologic relationships are commonly considered to include: plants which, while attaching themselves to other plants, actually obtain their nourishment from the air (these are called epiphytes); parasitic and partially parasitic plants, which derive nourishment from the roots or stems of other plants; carnivorous plants; which trap and absorb insects or small aquatic animals; climbing plants; water plants; salt-loving plants; etc. With the exception of epiphytes, most of these groups contain a considerable number of representatives in our flora.

Hemiparasites are exemplified by several species of Dwarf Mistletoe (*Arceuthobium*) found growing on the branches of coniferous trees. Others in this group, such as *Castilleja* and *Pedicularis*, attach themselves to the roots of other plants.

Total parasites with no green colouring matter are exemplified by Dodder (*Cuscuta*) and the family *Orobanchaceae* with 5 Canadian genera.

Saprophytes likewise contain little or no chlorophyll and occur in some genera of *Orchidaceae*, such as Coral-root (*Corallorrhiza*), and 5 genera of *Monotropaceae*. In this last family the Indian Pipe (*Monotropa uniflora*) is the best known.

Three genera of carnivorous plants, namely, *Drosera*, *Pinguicula*, and *Sarracenia*, have leaves adapted for the capture of insects, while *Utricularia* has bladder-like organs in which minute aquatic animals are trapped.

Representatives of climbing plants occur in 23 genera. A variety of Poison Ivy (*Rhus Toxicodendron*) climbs by means of rootlets developed on the woody stem, while species of *Galium* scramble over other vegetation by means of hooks. Tendril-climbers occur in 4 families represented by *Smilax*, *Vicia*, *Vitis*, *Echinocystis*, and 3 other genera, while leaf-climbers are exemplified by *Adlumia*.

* For an explanation of the classification and naming of the species mentioned in connection with these groups, see the part of this article dealing with "Classification of Flora", pp. 35 to 37.

There are a considerable number of herbaceous twiners, such as *Dioscorea* and *Ipomoea*, while woody twiners or lianes are exemplified by *Celastrus*, *Menispermum*, and some species of *Lonicera*.

Water-plants are well represented in the Canadian flora, as might be expected in a country with so many rivers and lakes of all sizes. The adaptations shown by water-plants to the surrounding medium are very varied in the different species, but one of the most characteristic features is the occurrence of air-spaces throughout all parts of the plant. These serve not only to give buoyancy to the stem and leaves, but also serve for the passage of gases throughout the tissues. A full discussion of the various adaptations will be found in the survey by the present author.¹⁸ While it is difficult in some cases to draw the line between typical water-plants and swamp-plants, it is safe to say that there are 40 genera containing representatives of this group. Some of these, such as *Lemna*, *Callitriche*, and *Hippuris*, have a very wide distribution throughout the world. Among the more interesting members of this group are: *Wolffia*, one of the tiniest seed-plants known; *Phyllospadix*, growing in the sea on the Pacific coast; *Podostemon*, the only representative in Canada of a peculiar group of plants found attached to stones in running water; the Pickerel-weed (*Pontederia cordata*); the Water-shield (*Brasenia Schreberi*), and the American Lotus (*Nelumbo lutea*), both of which belong to the Waterlily family.

Spiny or prickly plants are probably adapted to defend themselves against browsing animals. They are represented by 2 genera of the Cactus family, namely *Mammillaria* and *Opuntia*, by various species of *Ribes*, also by Prickly Ash (*Xanthoxylum americanum*), Devil's Club (*Echinopanax horridum*), and others. Presumably belonging to the same ecologic group are plants with stinging hairs, such as *Laportea* and *Urtica*.

Halophytes or salt-loving plants are well represented in the Canadian flora. Some of the most striking examples are the Sea Lungwort (*Mertensia maritima*) and the Sea Lavender (*Limonium carolinianum*) found only on the Atlantic coast, while Scottish Lovage (*Ligusticum scoticum*), Beach Pea (*Lathyrus maritimus*), and Sea Ragwort (*Senecio Pseudo-Arnica*) occur on both the Atlantic and Pacific coasts. Some species, such as Lyme-grass (*Elymus arenarius*), Beach-grass (*Ammophila arenaria*) and Sea Rocket (*Cakile edentula*), are restricted to areas of drifted sand, while others, such as Sea Arrow-grass (*Triglochin maritima*) and Salt-grass (*Distichlis spicata*) are partial to the salt marsh.

It is worthy of note that a considerable number of plants belonging to this group, such as Beach Pea, Rocket, Beach-grass, and Knotweed Spurge (*Euphorbia polygonifolia*), also occur on the shores of the Great Lakes, indicating that those bodies of water were formerly connected with the sea. Other salt-loving plants, such as Sea Arrow-grass, Salt-grass, Sea Milkwort (*Glaux maritima*) and species of *Salicornia* and *Plantago*, occur also on saline soil in the Prairie Provinces.

A much fuller account of the relation of the above groups to environmental conditions, as well as methods of dispersal of seeds and fruits by wind and animals will be found in the "Survey"¹⁸ by the author.

Exotic Flora.*—In addition to the native or indigenous flora many other species have from time to time found their way into this country. Some of these have evidently come to stay and have proved themselves to be much more aggressive in their demand for elbow room than the indigenous species. Others may persist for a few years and then disappear. The majority have probably been

* See footnote, p. 33.

introduced accidentally, but some, more particularly those cultivated for their beauty or belonging to the class of garden herbs, such as Caraway, Catnip, Tansy, etc., have been brought in by immigrants from various countries. These frequently escape in the vicinity of towns where garden refuse containing living roots or seeds has been thrown on dump heaps. Some doubtless came in by way of imported feeding materials such as hay or bird seed. But much the most important method of introduction was in the form of impurities in imported farm seeds.

Of the introduced species comparatively few are shrubs, such as Barberry, Buckthorn, etc. Most of these have fleshy fruits which are eaten by birds and in this way the seeds become distributed. Of the herbaceous species, the majority are annual plants with a special liking for cultivated ground, as every farmer and gardener knows by experience. Familiar examples are Wild Mustard, Goosefoot, Purslane, Groundsel, etc. The little Pineapple Weed (*Matricaria suaveolens*) is found from Cape Breton island to the Queen Charlotte islands. Others are biennial in nature, such as Great Mullein and Burdock. Many are perennial and are found on waste ground, roadsides, and pastures. Some of the most noxious weeds are in this class, such as Couch Grass, Docks, Field Bindweed, Ox-eye Daisy, Creeping Thistle, etc. One would not expect to find many plants whose original home was in a warmer climate maintaining themselves in this country, but there are some, such as Carpet Weed (*Mollugo verticillata*) and *Galinsoga ciliata*, the latter of which is a native of tropical America. Both are annuals and they are able to complete their life history here during the growing season.

There are even some aquatic plants among the immigrants, such as Flowering Rush (*Butomus umbellatus*), a species with pretty flowers which is spreading along the Ottawa and St. Lawrence rivers.

As might be expected, the larger numbers of introduced species are to be found in those families a considerable number of whose members are cultivated for use or ornament. These are as follows, with the number of exotic species belonging to each: *Compositae* 92; *Gramineae* 72; *Cruciferae* 53; *Leguminosae* 40; *Labiatae* 29; *Caryophyllaceae* 29; *Rosaceae* 28; *Scrophulariaceae* 23; *Umbelliferae* 17; *Polygonaceae* 17. Altogether about 600 exotic species which were not planted intentionally in their present habitats by human agency have been recorded as occurring in this country.

Further information on this subject will be found in Ada Georgia's "Manual of Weeds",¹⁷ and in various local floral lists.

CLASSIFICATION OF FLORA.

Before proceeding to review the various plant groups found in Canada, it may be desirable to explain briefly the basis upon which plants are classified and named in this article. Individuals, whether of the higher or lower forms of plant life, that resemble each other in their structural characteristics are grouped together under the term species; species which exhibit one or more similar characteristics are further grouped under a genus; and genera are similarly grouped in a family. The names of all these plant classifications are in Latin, which is still to a large extent internationally used by scientists. A species of plant of any group is always identified by a double Latin name, such as the Wild Plum (*Prunus nigra*), the Sand Cherry (*Prunus pumila*), or the Pin Cherry (*Prunus pennsylvanica*): the second word is the name of the species, while the first is that of the genus. In this respect, plant names resemble personal names, except that the genus name, corresponding to the

surname, comes first. Family names mostly end in the termination—*aceae*, Families in their turn are grouped into still larger subdivisions of the vegetable kingdom.

A popular arrangement of the vegetable kingdom is that which divides all plant forms into phanerogams or cryptogams, the former being characterized by the possession of seeds, while the cryptogams have no seeds, but are propagated by minute or microscopic bodies known as spores.

Phanerogams.—The phanerogams are divided into: (1) gymnosperms in which the seeds, instead of occurring in a closed receptacle, are found without any covering or merely placed between the scales of the cone; and (2) angiosperms in which the seeds are contained in a closed structure which later becomes the fruit. The gymnosperms, moreover, are all shrubs or trees, while the majority of angiosperms are herbaceous. The latter group is further subdivided into monocotyledons and dicotyledons. In the monocotyledons the leaves are usually much longer than broad, with parallel veins, and the vast majority of the group are herbaceous, while the dicotyledons have net-veined leaves and a considerable number of species are shrubs or trees. Further subdivisions of these groups carry the classification down to families, genera, and species.

Cryptogams.—The cryptogams, according to popular rather than strictly scientific usage, may be considered as consisting of six groups: vascular cryptogams, mosses, liverworts, lichens, fungi, and algæ. The vascular cryptogams have a lignified or woody supporting tissue which serves at the same time to conduct the sap. In common with the two next lower groups—the mosses and liverworts—they exhibit in their life-history an "alternation of generations", that is, a sexual followed by an asexual generation. The mature plant in the vascular cryptogams is the asexual stage. This group has three leading subdivisions—the ferns, horse-tails (*Equisetum*), and club-mosses (*Lycopodium*, etc.).

In the mosses and liverworts the mature plant is the sexual generation. They are generally lowly plants occurring mostly on damp soil or in shady places. Lignified or woody tissue is almost entirely absent. The mosses are leafy plants with only a single mid-vein in the leaf except in the genus *Sphagnum* which has none. In the liverworts two types occur, namely: (1) the thalloid type in which there is no differentiation into stem and leaf, and (2) the leafy type in which the leaves occur in two rows on the stem and are devoid of a mid-vein.

The lichens are a combination of the two lowest groups of plants and consist of a fungus and an alga living together for their mutual benefit. They are mostly greyish in colour but sometimes orange, sometimes black. They occur on rocks, or the bark of trees, or sometimes on the surface of the ground and exhibit three leading forms—the crustaceous, the foliose or leafy, and the fruticose or shrub-like.

The most characteristic feature of fungi is the absence of the green colouring matter (chlorophyll) so characteristic of most groups of plants. In consequence they are not truly self-supporting but must derive their food materials from the decaying remains of other plants or animals, in which case they are known as saprophytes, or else they attach themselves to the bodies of other plants (rarely animals) as parasites, the plant attacked being known as the host. There are three main groups of fungi, namely, *Phycomycetes*, *Ascomycetes* (including such forms as blue mould and morels), and *Basidiomycetes* (including mushrooms, polypores, puffballs, etc.). Under the last group are usually included the rusts (*Uredineae*), while the *Pyrenomycetes* are a sub-group of *Ascomycetes*. Two other groups of

plants are sometimes classified under fungi, namely, bacteria which contain the smallest living organisms and slime fungi (*Myxomycetes*) which are sometimes considered as belonging to the animal kingdom.

The algae, almost without exception, occur in water, some being confined to fresh water, others occurring only in the sea. They vary greatly in size, some, such as diatoms and desmids, being one-celled microscopic bodies, while others are several yards in length. Chlorophyll is usually present but in many the green colour is masked by some other pigment. The colour-groups usually recognized are the blue-green (*Cyanophyceae*), green (*Chlorophyceae*), brown (*Phaeophyceae*), and red (*Rhodophyceae*). The *Diatomaceae*, which are sometimes classified among algae, are of a golden colour, have a flinty covering composed of silica and are found, some in fresh, others in salt water. Both the blue-green and the green algae have likewise species characteristic of each medium. But the *Desmidiaceae* and allied species as well as the Stoneworts (*Characeae*) occur exclusively in fresh water. Both the *Phaeophyceae* and the *Rhodophyceae* occur exclusively in the sea, with the exception of 3 genera in the latter group.

Section 1.—Phanerogams.

In the 11th edition of Engler and Diels' "Syllabus der Pflanzenfamilien",¹⁸ there are described 314 families of flowering plants (angiosperms). On the same basis of classification, besides 3 families of gymnosperms, there are 124 families of indigenous angiosperms in Canada, but some of these, such as *Dioscoreaceae*, *Acanthaceae*, *Bignoniaceae*, and *Melastomataceae*, whose chief centres of distribution are in much warmer climates, are represented in this country by a single species only.

There are in Canada about 700 genera of indigenous phanerogams of which 10 belong to the group of gymnosperms, and 690 to the angiosperms of which 142 genera are monocotyledons and 548 dicotyledons. It is more difficult to reckon up the number of species owing to the divergence of opinion on the definition of this term. If, however, we employ the term 'species' in the wider Linnaean sense, there are about 35 species of gymnosperms and 4,112 species of angiosperms. About one-fourth of the latter are monocotyledons and the remainder dicotyledons. In the dicotyledonous group, about 346 species are shrubs or trees.

The largest family, as might be expected, is *Compositae* with 630 species, while *Cyperaceae* and *Gramineae* come next each with 352 species. Next in point of numbers come *Rosaceae* with 283 species, *Leguminosae* with 189 species, *Cruciferae* with 152 species, and *Scrophulariaceae* with 151 species.

The largest genus in the Canadian flora is *Carex* with 285 species followed by *Salix* with 96 species. Seven other genera contain over 50 species. These, in order of numerical importance, are *Aster*, *Potentilla*, *Saxifraga*, *Ranunculus*, *Solidago*, *Poa*, and *Polygonum*. There are 7 genera with 40 to 50 species each, and 26 genera with 20 to 40 species each. An estimate of the number of species in each genus will be found in the author's "Guide to the Genera".¹⁹

In the study of phanerogams, under the diverse conditions of plant life existing in a country so extensive as Canada, it is convenient and necessary to divide the country into various regions or zones, each of which, because of circumstances of climate, latitude or topography, tends to exhibit a flora characteristic of that region and differing in important aspects from that of other regions.

Floral Regions.—Considerable difference of opinion exists among botanists on the subject of the division of Canada and the United States into natural vegetational areas. Only four of the proposed schemes will be considered here.

So far as it applies to Canada, the scheme proposed by Merriam²⁰ consists of six zones, three of which, namely, Arctic, Hudsonian, and Canadian, are transcontinental. Next in order from north to south come the Transition Zone including the true prairie and then the Alleghanian Zone comprising part of southern Manitoba, part of southern Ontario, and parts of New Brunswick and Nova Scotia bordering on the bay of Fundy. The sixth zone, the Carolinian, includes the region in southern Ontario south of a line drawn from Hamilton to Sarnia.

Basing his subdivisions on the distribution of trees, Sargent²¹ recognizes only three areas in Canada south of the Arctic Region. The North Eastern section includes the area east of a line from Wood mountain in Saskatchewan to the mouth of the Mackenzie river. The Rocky Mountains section includes a broad belt on each side of this chain, while the North Western section comprises the Selkirk mountains and the western half of British Columbia and Yukon.

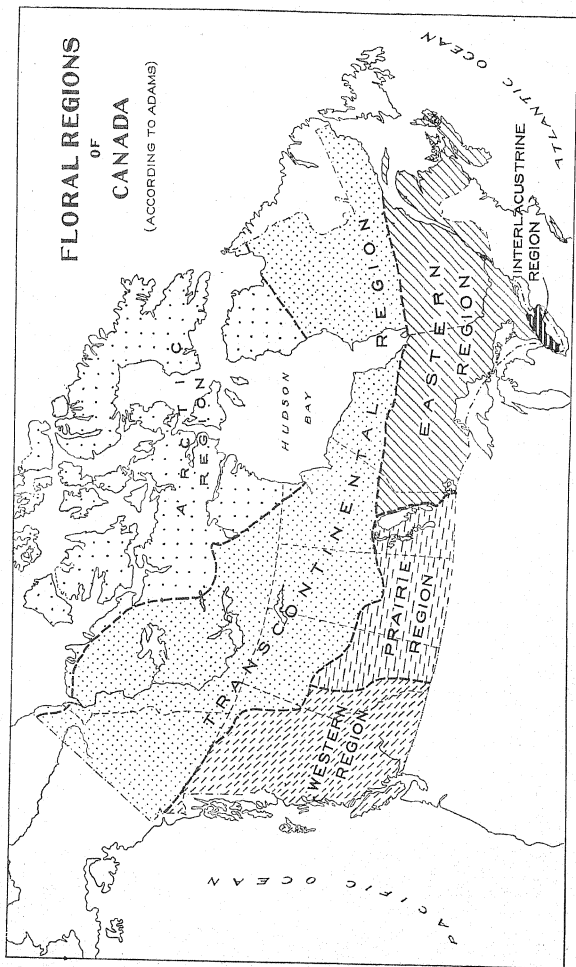

Harshberger²² recognizes seven phytogeographic areas in Canada. These are: (1) Arctic Zone; (2) Subarctic or Northern Coniferous Forest Zone; (3) St. Lawrence-Great Lake Region, which extends as far west as lake Winnipeg; (4) Prairie Region; (5) Rocky Mountain Region, extending to the northern boundary of British Columbia; (6) Sitkan Region, comprising the northwestern coastal temperate zone extending from Cook inlet to the fifty-first parallel and including the northern part of Vancouver island; (7) Columbian Region, extending in Canada from about the bend of the Fraser river to the International Boundary. Most of the above regions are subdivided further into smaller areas.

Macoun and Malte²³ in their review of the flora of Canada divide the country into the following eleven vegetational areas: Arctic Zone; Subarctic Forest Zone; Hardwood Forest Zone; Carolinian Zone; Prairie (with three subdivisions); Rocky Mountain Foothills; Rocky Mountains Proper; Selkirk Range; Coast Range; Vancouver Island; and Dry Belts of British Columbia. In this scheme the Subarctic Forest Zone included the Hudsonian and part of the Canadian Zone of Merriam, while the Prairie was approximately the same as Merriam's Transition Zone.

In the present delimitation of the boundaries of the floral regions, which is almost the same as that previously proposed by the present author,¹⁶ Canada has been divided into six regions: Arctic; Transcontinental; Eastern; Interlacustrine or Carolinian; Prairie; and Western. Several of these, particularly the Western, can be divided into smaller areas each with a distinctive flora. The boundaries of these six regions are shown on the accompanying map. As there is a certain amount of overlapping of the floras of any two regions where they meet, the above boundaries are not to be interpreted too rigidly. Characteristic features of each of the floral regions are given under the respective centre headings below. The distribution of seed-bearing plants in Canada is discussed in some detail under these six regions; for each, a brief outline is given of characteristic factors of climate or physiography which are likely to exercise a controlling influence upon the plant life within that region.

FLORAL REGIONS OF CANADA

(ACCORDING TO ADAMS)

Arctic Region.

This is regarded by general consent as including the treeless region along the northern mainland of Canada usually known as the "Arctic Prairies", together with the numerous islands forming the archipelago still farther north. One of the most outstanding climatic features of this region is the shortness of the season in summer during which the temperature is sufficiently high for the activity of plant life. But, although the mean temperature of the summer months remains comparatively low, a compensating factor is the prolonged period of daylight. North of the Arctic Circle there are a considerable number of days during which the sun never goes below the horizon. Even at Fort Rae in latitude $62^{\circ} 40'$ the average daily duration of daylight is 19.8 hours in June and 18.9 hours during July.

Another feature of this region, important in its bearing on plant life, is the fact that the lower layers of the soil remain permanently frozen and only a few feet on the surface thaw out in summer. Thus, as an example, along the northern edge of the Transcontinental Region, according to figures quoted by Koeppé,¹¹ at Fort McPherson near the mouth of the Mackenzie river the frost penetrates to a depth of 52 feet and the ground on the surface thaws to a depth of only 3.5 feet, while at York Factory near the mouth of the Nelson river on Hudson bay the ground freezes to a depth of 19.8 feet and thaws out to a depth of 2.3 feet.

As an indication of the climatic conditions of temperature and precipitation likely to govern plant life in the Arctic Region, meteorological data are given below for three representative places. Unfortunately data on sunlight are not available. The records summarized here cover only 3 years in the cases of Coppermine and Pangnirtung and 5 years at Chesterfield.

METEOROLOGICAL RECORDS IN THE ARCTIC REGION.

Place.	Absolute Minimum Range.	Mean Temperature.		Average Rain, June to Sept.
		January.	July.	
	°F.	°F.	°F.	in.
Coppermine.....	-54 to -42	-23.4	52.0	3.86
Chesterfield.....	-60 to -47	-26.6	48.0	6.96
Pangnirtung.....	-46 to -38	-17.8	46.5	6.33

For a much fuller discussion of the climate of this region, reference should be made to Koeppé's work¹¹ already mentioned.

The vegetative characters of the Arctic Zone have been frequently described^{16,23} but nowhere better than by Persild,²⁴ who writes as follows:-

Among the herbs of the Arctic Zone there are no climbing plants, none that are poisonous, nor any that are protected by spines or thorns. Very few are annuals and as a general rule Arctic plants of all species depend only to a limited extent for their propagation upon seed, protecting themselves against unfavourable seasons by various means of vegetative reproduction. One of these means is wintering buds which are not buried in the soil, but are situated close to the surface and are well protected by withered leaves. Most of the herbs are caespitose with numerous leafy shoots, forming dense cushions or rosettes. In most species a profuse branching is the rule.

To this description might be added the viviparous condition where a small vegetative bulb-like growth takes the place of a flower, as in *Polygonum viviparum*. An example of the annual type of plant is furnished by *Gentiana arctophila*.

Woody plants are exemplified by dwarf shrubs of various kinds whose low stature is doubtless due mainly to harsh climatic conditions, such as cold soil, strong winds, etc. Some of these, such as *Diapensia lapponica*, exhibit the cushion-like type of growth found in herbs; others, such as *Empetrum nigrum*, have a trailing habit of growth. In *Loiseleuria procumbens* the leaves have a leathery texture, while in *Salix glauca* the leaves are covered by a waxy deposit to diminish transpiration.

The families best represented as regards number of species are *Gramineae*, *Cyperaceae*, *Compositae*, *Cruciferae*, *Caryophyllaceae*, *Saxifragaceae*, and *Ranunculaceae*.

There are 5 genera, namely, *Bartsia*, *Chrysanthemum*, *Eulrema*, *Lagotis*, and *Parrya*, which do not appear to be represented in Canada outside the Arctic Region.

Many species of Arctic plants occur also on the summits of mountains farther south where the climatic conditions are somewhat similar, but so far as is known at present there are about 120 species not found south of the Canadian Arctic Zone.

In spite of the comparative inaccessibility of the greater part of the Arctic Region, that territory has received a good deal of attention from botanical investigators. The most complete account of the flora is to be found in the work of Simmons²⁵ who records 8 species of ferns and their allies, 59 species of monocotyledons, and 137 species of dicotyledons. The report of Macoun and Holm²⁶ on the results of the Canadian Arctic Expedition, 1913-18, includes 230 species of vascular plants, while a recent report by Grøntved,²⁷ dealing with the 5th Thule Expedition, enumerates 6 species of ferns and their allies, 2 conifers, 47 monocotyledons, and 139 dicotyledons, together with 12 hybrids. Polunin²⁸ records 391 species from Akpatok island, of which 129 were vascular plants and the remainder various groups of cryptogams. Other important contributions to the flora of this region are those of Holm²⁹ and Johansen.³⁰

Transcontinental Region.

This region occupies, to a large extent, a transitional position between the Arctic Region to the north and the Eastern Region to the south, not only in regard to climate but also in its vegetation. As the name implies, it stretches across the continent from the gulf of St. Lawrence to Yukon and through Alaska to the Pacific ocean. It includes the whole of the Hudsonian and the western part of the Canadian Zone in Merriam's classification. No land elevations in the eastern part reach an altitude likely to alter the characteristic plant life, but in the far northwest and Yukon there are mountainous areas reaching to high altitudes. East of this mountainous part, the region is characterized by a generally flat topography with innumerable lakes ranging in size from mere ponds up to Great Bear lake with an area of 11,660 square miles. Bogs and muskegs are also very common. The altitude of the mountains and the areas and elevations of the chief lakes will be found in Chapter I at pp. 8 and 9, and 12 and 13 respectively.

Some idea of the variations in the climate of different parts of this region may be obtained from the figures in the following statement, derived from records covering the years 1909 to 1937, inclusive. It should be noted that the places of record are on the sea coast or along river courses and therefore are not representative of higher altitudes occurring especially in the northwestern part of the region.

METEOROLOGICAL RECORDS IN THE TRANSCONTINENTAL REGION.

Dawson, Yukon.....	-86 to -30	-21.0	59.3	5.87	1

¹ Data not available.

The outstanding feature of this region is the belt of forest, mainly coniferous, which extends throughout except for the high altitudes in Yukon. Characteristic species are the White Spruce (*Picea glauca*), Black Spruce (*Picea mariana*), Tamarack (*Larix laricina*), Balsam Fir (*Abies balsamea*), Jack Pine (*Pinus banksiana*), Aspen (*Populus tremuloides*), Balsam Poplar (*Populus balsamifera*), and White Birch (*Betula papyrifera*).

Some of the most characteristic shrubs are Junipers (*Juniperus communis* and *horizontalis*), Scrub Birch (*Betula glandulosa*), Buffalo Berry (*Shepherdia canadensis*), Swamp Red Currant (*Ribes triste*), Northern Gooseberry (*Ribes oxycanthoides*), Shrubby Cinquefoil (*Potentilla fruticosa*), Bearberry (*Arctostaphylos Uva-ursi*), Wild Rosemary (*Andromeda Polifolia*), Leather-leaf (*Chamaedaphne calyculata*), Labrador Tea (*Ledum groenlandicum*), Swamp Laurel (*Kalmia polifolia*), Creeping Snowberry (*Chiochens hispidula*), Rock Cranberry (*Vaccinium Vitis-idaea*).

Herbaceous species characteristic of the area are Marsh Arrow-grass (*Triglochin palustris*), Tall Cotton-grass (*Eriophorum angustifolium*), Tufted Hair-grass (*Deschampsia caespitosa*), Holy Grass (*Hierochloa odorata*), Floating Pondweed (*Potamogeton natans*), Twisted-stalk (*Streptopus amplexifolius*), Coral Root (*Coralorrhiza trifida*), Rattle-snake Plantain (*Peramium ophioides*), Gold Thread (*Coptis trifolia*), Northern Stitchwort (*Stellaria borealis*), Kidney-leaved Violet (*Violet renifolia*), Grass of Parnassus (*Parnassia palustris*), Bunch-berry (*Cornus canadensis*), Baked-apple Berry (*Rubus Chamaemorus*), One-flowered Wintergreen (*Moneses uniflora*), Cow-wheat (*Melampyrum lineare*), Twin-flower (*Linnaca americana*).

Apparently only one species is confined to this region, namely, the Small White Waterlily (*Nymphaea tetragona*).

Extensive lists of the flora of this region have been published by various investigators but, as much of the interior is inaccessible by ordinary means of conveyance, only certain areas along the coast have been studied intensively in the eastern part. The list issued by St. John²¹ for the north shore of the gulf of St. Lawrence included 31 species of ferns and allied plants, 7 species of conifers, 146 native and 7 introduced species of monocotyledons, 240 native and 31 introduced species of dicotyledons. A later list by Lewis,²² covering a somewhat similar area, contained the names of 567 vascular plants. In connection with the southern and eastern borders of James bay, a list of plants collected by Potter²³ contained 16 species of ferns and allied groups, 8 species of conifers, 94 species of monocotyledons and 200 species of dicotyledons. Introduced plants were included in the above totals.

In the west, Raup's investigations²⁴ covered an area somewhat transitional between the Transcontinental, Prairie, and Western Floral Regions. As the result of an extensive survey he mentions the occurrence of 38 species of ferns and allied groups and 716 species of seed-plants. Considerable areas of saline soil occur in the region traversed in which 14 species characteristic of such habitats were noted. Among these were *Triglochin maritima*, *Distichlis spicata*, *Chenopodium rubrum*, *Salicornia europaea*, *Suaeda depressa*, *Spergularia salina*, *Rumunculus cymbalaria*, and *Plantago eriopoda*, all of which are characteristic plants of the sea coast.

Eastern Region.

This region, which corresponds in most particulars to the Hardwood Forest Zone of Macoun and Malte,²⁵ contains a large variety of soil-types. While practically all the higher altitudes are covered by forests up to their summits, except where they have been destroyed as the result of fire or lumbering operations, there are two well-marked treeless areas where the vegetation consists of scrub-heath. One of these areas constitutes the "barrens" of northern Cape Breton island, while the other consists of a small plateau 4 miles long by 2 miles broad on the summit of mount Albert in the Gaspé peninsula. At no other places within the region does altitude appear to exercise a controlling influence upon the flora.

¹ Data not available.

While most of the plants in this area extend southward through the district bordering on the Great Lakes into the United States, very few species have a westward extension beyond lake Winnipeg into the Prairie Region. If, for the present, the Eastern and Interlacustrine Regions be considered together, there are 14 families, with 1 or 2 genera in each, which do not occur elsewhere in Canada. These, with their respective genera, are as follows: *Eriocaulaceae*—*Eriocaulon*; *Pontederiaceae*—*Heteranthera*, *Pontederia*; *Xyridaceae*—*Xyris*; *Acanthaceae*—*Dianthera*; *Thymelaeaceae*—*Dicra*; *Hamamelidaceae*—*Hamamelis*; *Ilicaceae*—*Ilex*, *Nemopanthis*; *Juglandaceae*—*Carya*, *Juglans*; *Menispermaceae*—*Menispermum*; *Phrymaceae*—*Phryma*; *Podostemonaceae*—*Podostemon*; *Rutaceae*—*Xanthoxylum*; *Staphyleaceae*—*Staphylea*; *Tiliaceae*—*Tilia*.

In addition to the above 17 genera, there are 59 others confined to the eastern half of the Dominion. A list of these will be found in the present author's "Survey",¹⁶

While the majority of the trees in this area are deciduous in nature, there are also a considerable number of evergreen species, the most characteristic of which are White Pine (*Pinus Strobus*), Red Pine (*Pinus resinosa*), Hemlock (*Tsuga canadensis*), and White Cedar (*Thuja occidentalis*).

Some of the more important deciduous trees are Yellow Birch (*Betula lutea*), Burr Oak (*Quercus macrocarpa*), Red Oak (*Quercus rubra*), Beech (*Fagus grandifolia*), White Elm (*Ulmus americana*), Sugar Maple (*Acer saccharum*), Red Maple (*Acer rubrum*), White Ash (*Fraxinus americana*), Black Ash (*Fraxinus nigra*), Black Cherry (*Prunus serotina*).

Among the numerous shrubs found in this region, mention may be made of Ground Hemlock (*Taxus canadensis*), White Virgin's Bower (*Clematis virginiana*), Purple Flowering Raspberry (*Rubus odoratus*), Woolly Steeple-bush (*Spiraea tomentosa*), Staghorn Sumac (*Rhus hirta*), Prickly-fruited Gooseberry (*Ribes cynosbati*), Blue-berried Grape (*Vitis vulpina*), Smooth-leaved Honeysuckle (*Lonicera dioica*), Withe-rod (*Viburnum cassinoides*), and various others.

Herbaceous species are very numerous. Among those typical of the forest floor are Yellow Clintonia (*Clintonia borealis*), Yellow Adder's Tongue (*Erythronium americanum*), White Trillium (*Trillium grandiflorum*), Hairy Solomon's Seal (*Polygonatum biflorum*), Red Baneberry (*Actaea rubra*), Liver-leaf (*Anemone hepatica*), Squirrel Corn (*Dicentra canadensis*), Two-leaved Mitrewort (*Mitella diphylla*), Coolwort (*Tiarella cordifolia*), Hairy Sweet Cicely (*Osmorhiza Claytani*), Enchanter's Nightshade (*Circaea lutea*), Wild Sarsaparilla (*Aralia nudicaulis*), Round-leaved American Wintergreen (*Pyrola americana*), Blue Wood Aster (*Aster cordifolius*), Broad-leaved Golden Rod (*Solidago flexicaulis*), Tall Rattlesnake-root (*Prenanthes trifoliolata*), and many others.

Characteristic of swampy open ground are a number of species with showy flowers such as Purple Fringed Orchid (*Habenaria psycodes*), Drooping Ladies' Tresses (*Spiranthes cernua*), Closed Gentian (*Gentiana Andreuxii*), Turtle Head (*Chelone glabra*), Square-stemmed Aster (*Aster puniceus*), Golden Ragwort (*Senecio aureus*).

Macoun and Malte,²³ after noting the succession of spring, summer, and autumn flowers in this region, call special attention to the lavish display of colouring in the forest at the end of the growing season in the following passage:—

Very characteristic of the zone is the autumnal colouring of the leaves of trees, shrubs, and herbaceous plants. This autumnal colouring lasts a comparatively long time, from about the first week in September to the second week in October, dependent on the dryness of the season. During that period the most splendid display of colours is exhibited, especially in the open mixed woods where underbrush is well developed. Every shade of yellow, golden bronze, red and scarlet is mixed in a gorgeous symphony of colours generally most marvellously modulated by the sombre deep dark or bluish green of the conifers, which are dotted among the deciduous trees. No such wealth of colour is ever met with in any other country.

A feature of considerable interest, as has been pointed out by Fernald,^{25, 26} is the presence in Nova Scotia, doubtless due to the milder winter climate, of a number of plants characteristic of the Coastal Plain Region of the United States. Among these may be mentioned *Lophiola americana*, *Lilaeopsis lineata*, *Sabbatia Kenedyana*, *Gerardia maritima*, *Utricularia subulata*.

Specially characteristic of the Eastern Region are certain plants which, as pointed out by Fernald,²⁷ show a remarkable discontinuity in their distribution. In this connection he writes: "The splendid sunflower-like *Senecio Pseudo-Arnica* Less. abounds on the shores of Bering sea, thence southwestward to Japan and Northern Korea and southeastward to Vancouver island. Otherwise it is known only as a

sea-strand plant centring on the gulf of St. Lawrence but with outlying stations northward beyond Hamilton inlet and very rarely southward to Grand Manan island at the entrance of the bay of Fundy; and it has a well-marked variety endemic to the Mingan islands". Elsewhere²⁸ he states that "these areas which have been free from vigorously eroding continental ice-sheets since the opening of the long interglacial epoch (preceding the last continental advance) are at once distinguished by the presence of hundreds of species which in eastern America are known nowhere else—and which are interpreted as relics of the flora which was widespread across the boreal regions during the long interglacial epoch but which was recently exterminated from the intermediate areas by the advance of the Wisconsin ice-sheet. Such isolations in the regions uninhabited by the latest continental ice are indicated by *Polystichum mohrioides*, *Senecio resedifolius*, *Lesquerella arctica*, *Erigeron compositus* and *Crepis nana*; and restriction to unglaciated arctic America by *Oxytropis arctica*. With these plants, chiefly of western America, now isolated on the unglaciated areas about the gulf of St. Lawrence or in northern Labrador, there are many endemics (more than 100 known in this, as yet, scarcely explored area) which are closely related to species of remote geographic range, rather than to species of the adjacent continental region. Such endemics are well illustrated by *Salix calcicola*, eastern representative of the northwestern *S. Richardsonii*".

One of the principal areas to escape glaciation in this region is the Gaspé peninsula. Here, as pointed out by Marie-Victorin,¹² are a number of relics which also are found in the western cordilleran region, such as *Danthonia intermedia*, *Dryas Drummondii*, *Erigeron hyssopifolius*, etc. Others are endemics with cordilleran affinity, such as *Astragalus gaspensis*, *Gentiana gaspensis*, *Aster gaspensis*, etc.

Among the more important publications dealing with the flora of the Eastern Region mention may be made of those of Lindsay²⁹ and Nichols³⁰ for Nova Scotia of which the latter dealt mainly with an ecological survey but also included the names of many vascular plants and mosses. The list of Hurst³¹ included 595 species and varieties for Prince Edward Island, but additions made since bring the total of native and introduced plants up to 641. The flora of New Brunswick has been investigated by Fowler³² who gives the detailed distribution of 985 species of vascular plants in that province. The comprehensive work of Marie-Victorin³ on the flora of Quebec deals mainly with the southern part of that province as far north as lake St. John and the Saguenay river and east of the gulf of St. Lawrence with the exception of the Gaspé peninsula. Altogether, 1,917 species are described or mentioned. Of the various papers dealing with the province of Ontario, one of the most important is that of Fernald³³ relating partly to the flora of the Bruce peninsula.

Interlacustrine or Carolinian Region.

This is the smallest of all the floral regions into which the country has been divided, but nevertheless it has some quite unique features when viewed from a botanical standpoint. Owing to its proximity to the Great Lakes, this region has a shorter and milder winter than the country farther north, in this respect resembling the southern part of Nova Scotia.

There are 11 families found in this region which do not occur elsewhere in Canada. These, with the genera contained in them, are as follows: *Dioscoreaceae*—*Dioscorea*; *Saururaceae*—*Saururus*; *Moraceae*—*Morus*; *Anonaceae*—*Asimina*; *Magnoliaceae*—*Liriodendron*, *Magnolia*; *Phytolaccaceae*—*Phytolacca*; *Lauraceae*—*Ben-*

zoïn, *Sassafras*; *Platanaceae*—*Platanus*; *Cassiaceae*—*Cercis*, *Gleditschia*, *Gymnocladuas*; *Melastomataceae*—*Rhexia*; *Bignoniaceae*—*Tecoma*.

METEOROLOGICAL RECORDS IN THE INTERLACUSTRINE REGION.

Place.	Absolute Minimum Range.	Mean Temperature.		Average Rain, June to Sept.	Average Sunshine, May to October.
		January.	July.

¹ Vineland is 323 feet, while Woodstock is 980 feet above sea-level.

² Data not available.

In addition to the 15 genera mentioned above, there are 32 others peculiar to this region. A list of these will be found in the present author's "Survey".¹⁸ There are 262 species in this area which are not indigenous to any other part of Canada.

Some of the trees confined to this region are Black Walnut (*Juglans nigra*), Mockernut Hickory (*Carya alba*), Pignut Hickory (*Carya glabra*), Black Oak (*Quercus velutina*), Scarlet Oak (*Quercus coccinea*) and 5 other species of Oak, Blue Ash (*Fraxinus quadrangulata*).

Among the shrubs are Bristly Greenbrier (*Smilax hispida*), Poison Sumac (*Rhus Vernix*), Pink-flowered Crab-apple (*Pyrus glaucescens*), Woolly-leaved Grape (*Vitis aestivalis*), Flowering Dogwood (*Cornus florida*), and Deerberry (*Vaccinium stamineum*).

Some of the numerous herbs are White Adder's Tongue (*Erythronium albidum*), Yellow Fringed Orchid (*Habenaria ciliaris*), Flowering Spurge (*Euphorbia corollata*), Perennial Lupin (*Lupinus perennis*), Smooth-fruited Prickly Pear (*Opuntia humifusa*), Butterfly-weed (*Asclepias tuberosa*), Broad-leaved Water-leaf (*Hydrophyllum canadense*), Wild Bergamot (*Monarda fistulosa*), Dense Button-snakeroot (*Liatris spicata*), Tall Ironweed (*Vernonia altissima*).

Among the more important publications dealing with the flora of this region are those of Dodge for Lambton county⁴⁴ and Point Pelee.⁴⁵ The latter work contains the names of 865 species of vascular plants. Included in the district investigated was Pelee island, the most southerly part of the Dominion of Canada. On Pelee island, Dodge found 408 species, but he thinks "there should be found on this island about 650 or 700 species growing without cultivation", which shows "clearly that there is still work for a local botanist".

In Zenkert's work,⁴⁶ 1,702 species and varieties are mentioned, many of which occur on the Canadian side of the International Boundary.

Prairie Region.

The ground in this region rises gradually from about 750 feet in the Red River valley to about 4,500 feet above sea-level in the foothills of the Rocky mountains. The soil is usually deep and so the vegetation is better enabled to withstand drought by withdrawing moisture from the lower layers through the deeply penetrating roots.

The characteristic climatic features are wide variations in temperature, low annual precipitation, strong winds, and a high percentage of sunshine. The figures for some stations on the prairie are given below.

† Data not available.

While the typical prairie is treeless—except along the river valleys—there is a transitional belt of mixed prairie and woodland along the eastern and northern sides. In marked contrast to the Eastern and Interlacustrine Regions there is no family of plants confined in Canada to the Prairie Region. The number of genera which occur only on the prairie is also much reduced, amounting to 15 altogether. There are, however, about 267 species characteristic of the prairie and not occurring elsewhere, about half of which are included under the three families of composites, leguminous plants, and grasses.

A characteristic feature of certain parts of the Prairie Region is the presence of lakes with no outlet, around the margin of which the soil is saline or alkaline. In such localities plants occur which elsewhere are found on the sea coast, such as Spike Grass (*Distichlis spicata*), Sea Crowfoot (*Ranunculus cymbalaria*), Sea Milk-wort (*Glaux maritima*), and others.

On the dry prairie a marked feature of the vegetation is the abundance of xerophytes, that is, plants with adaptations calculated to counteract the loss of water from the plant by evaporation. As examples, the following species, which are confined in their distribution to the Prairie Region, may be mentioned. Among shrubby types, the Winter Fat (*Eurotia lanata*) has a dense covering of hairs, while the Thorny Buffalo Berry (*Shepherdia argentea*) has scales on the leaves. Of the herbaceous types, the Hoary Sage-brush (*Artemisia cana*) is covered with hairs; the Beard-tongue (*Pentstemon nitidus*) is glaucous; the Purple Skeleton-weed (*Lygodesmia juncea*) has the leaves much reduced in size; while in the Purple Cactus (*Mammillaria vivipara*) the stem is fleshy and leaves are absent altogether. As mentioned above, some of the prairie plants are deep-rooting and are thus enabled to withstand a period of drought.

The 15 genera which are confined to the Prairie Region are as follows: the family Gramineae includes *Buchloë*, *Munroa*, and *Schedonnardus*; the family Leguminosae includes *Amorpha*, *Petalostemon*, and *Thermopsis*; the family Compositae includes *Actinea*, *Gutierrezia*, *Hymenopappus*, and *Thelesperma*; while the other genera are *Eurotia*, *Paronychia*, *Mammillaria*, *Musineon*, and *Heliotropium*.

Of the trees occurring in the Prairie Region, the Lance-leaved Cottonwood (*Populus acuminata*) and Narrow-leaved Cottonwood (*Populus angustifolia*) do not occur naturally outside that area. The Manitoba Maple (*Acer Negundo*), while characteristic of the prairie, ranges for some distance beyond the Lake of the Woods into the Eastern Region. Some characteristic eastern species such as *Ulmus americana* and *Quercus macrocarpa* extend for a considerable distance into the prairie, while a typical western species, the Lodgepole Pine (*Pinus contorta*) is found on the western part of the Cypress hills, in Alberta.

The absence of trees on the true prairie has been the subject of various explanations. One of these is the prevalence of grass fires during summer which would tend to destroy all woody types of vegetation. Another possible cause is a period of drought which would tend to prevent the successful establishment of seedling trees. A third and much more probable cause was the former prevalence of large herds of buffalo. Only herbaceous types of vegetation could be expected to survive successfully the constant cropping of grazing animals.

There are about 16 species of shrubs confined to the Prairie Region, some of which have already been mentioned. Among the others are Buffalo Currant (*Ribes aureum*), Prairie Cherry (*Prunus Vesseyi*), and Skunk-bush (*Rhus trilobata*).

Of the numerous herbs whose distribution is limited to the prairie, only a few can be mentioned here. Some of these are Grama Grass (*Bouteloua oligostachya*), Prairie Violet (*Viola pedatifida*), Big-seed Dock (*Rumex venosus*), Prairie Turnip (*Psoralea esculanta*), Scarlet Gaura (*Gaura coccinea*), Prairie Lily (*Mentzelia decapetala*), Oval-leaved Milkweed (*Asclepias ovalifolia*), Western Ragweed (*Ambrosia psilostachya*).

Macoun and Malte²³ divide this region into three subdivisions or prairie steppes with their characteristic floral elements, the more important species in each subdivision being indicated.

A more detailed account of the distribution of plants in Manitoba will be found in the Check List of Jackson, Higham, and Groh⁴⁷ in which 42 species of ferns and allied plants, 12 species of conifers, 274 species of monocotyledons and 702 species of dicotyledons are recorded.

For Saskatchewan, Fraser and Russell⁴⁸ have indicated the distribution of 38 species of ferns and their allies, 9 species of conifers, 335 species of monocotyledons and 1,013 species of dicotyledons. Included in the list are 11 species partial to saline soil and also found on the sea coast which would indicate that much of the prairie was in comparatively recent times under the sea and that the coast-line was formerly far removed from its present limits.

No separate list appears to have been made of the species occurring in Alberta but the papers of Lewis, Dowding, and Moss,^{49, 50, 51} although mainly ecological in nature, include the names of many species not only of vascular plants but also of some mosses and lichens as well as fresh-water algae.

Western Region.

This region, extending from the Rocky mountains to the Pacific coast, presents a greater diversity of topography and climate than any of the other regions. The topography is described in some detail at pp. 6 to 8. There are numerous mountain ranges, on many of the higher altitudes of which glaciers and perpetual snow are present, while between the mountains are deep trenches or river valleys where the climate is moderate. On the western side of the Coast range rainfall is very

TYPICAL FLORAS AND HABITATS OF THE EASTERN AND INTERLACUSTRINE REGIONS

Eastern Region.—*Upper left:* Typical deciduous trees and summer herbage along Tay canal, Lanark County, Ont.; *Centre:* Maples—Autumn foliage in young maple forest, Gatineau district, Que.; *Upper right:* Staghorn Sumac, near Ottawa, Ont.; *Lower left:* Maiden-hair Fern, White Trillium and Wild Ginger, typical woodland plants of Eastern Region; *Lower right:* White Water Lilies, typical in lakes and streams of the Eastern Region. **Interlacustrine or Carolinian Region.**—*Upper left:* Sprig of Flowering Dogwood, conspicuous shrub of the Carolinian Region; *Middle left:* Leaves and flower of Tulip tree, native of Carolinian; *Lower left:* Smooth-fruited Prickly Pear, found in dry sandy locations along lake Erie; *Centre:* Black Walnut in open location, common in original Carolinian forest; *Upper right:* Flowers of American Lotus, ranging into Canadian Carolinian around Pelee island; *Lower right:* Showy Lady's Slipper, conspicuous orchid ranging from the Carolinian through most of the Eastern Region.

abundant, while to the east of that range is situated the Dry Belt extending from Okanagan to Taela lakes. The Interior Wet Belt, another zone of abundant precipitation, occurs along the western slope of the Selkirk mountains, while there is also a smaller dry belt in the vicinity of Kootenay lake. Some indication of the diversity of climatic conditions may be obtained from the meteorological records of the places given below. However, most of these places are centres of settlement and agriculture at comparatively low elevations and are not representative of conditions obtaining on the higher mountain slopes. Barkerville, with an elevation of 4,180 feet, is the highest point included.

¹ Data not available.

While there is no single family peculiar to the Western Region, there are 80 genera which do not occur elsewhere in Canada and the number of characteristic species is very large. Of these western genera, 2 are gymnosperms (*Chamaecyparis* and *Pseudotsuga*), while 12 are monocotyledons, including 6 of the lily family, but only 1 (*Melica*) of the grass family. The genus *Phyllospadix* occurs in the sea.

There are 66 genera of dicotyledons, of which 3 belong to the family *Cruciferae*, 3 to *Ericaceae*, 6 to *Umbelliferae*, and 18 to the family *Compositae*. The full list of genera will be found in the author's "Survey".¹⁶

Some of the characteristic trees of the Transcontinental Region are found also in the northern part of the Western Region, such as White Spruce, Black Spruce, Tamarack, Balsam Fir, and American Aspen. But, generally speaking, the trees of the Western Region are quite different. Among those with a comparatively wide distribution, at least in the southern part, are Lodgepole Pine (*Pinus contorta*), Western White Pine (*Pinus monticola*), Douglas Fir (*Pseudotsuga taxifolia*), Western Red Cedar (*Thuja plicata*), Black Cottonwood (*Populus trichocarpa*). The Engelmann Spruce (*Picea Engelmanni*) occupies a wide area to the east of the Coast Belt, while Western Larch (*Larix occidentalis*) is confined to the southeast part of British Columbia.

Four species occupy the higher slopes of the mountains and reach the limit of tree distribution, namely, White-bark Pine (*Pinus albicaulis*), Limber Pine (*Pinus flexilis*), Alpine Fir (*Abies lasiocarpa*), Alpine Larch (*Larix Lyallii*).

Some characteristic shrubs of the Western Region are Oregon Grape (*Mahonia Aquifolium*), Thimbleberry (*Rubus parviflorus*), Buck-brush (*Ceanothus sanguineus*), Devil's Club (*Echinopanax horridum*), Tall Mountain Bilberry (*Vaccinium membranaceum*), Wax-berried Elder (*Sambucus glauca*).

Among the more interesting herbaceous species found in this area are Skunk Cabbage (*Lysichiton camtschatcense*), Large-flowered Adder's Tongue (*Erythronium grandiflorum*), Western Wake-robin (*Trillium ovatum*), Western Wild Ginger (*Asarum caudatum*), Western Yellow Waterlily (*Nymphaea polysepala*), and various others.

The Selkirk range has a much higher rainfall than the Rocky mountains, resembling in this respect the conditions prevailing in the Coast Belt and as a result many species are common to both areas. Among such are Western Yew (*Taxus brevifolia*), Western Hemlock (*Tsuga heterophylla*), Mountain Hemlock (*Tsuga Mertensiana*), and Grand Fir (*Abies grandis*).

Other species of trees confined to the Coast Belt are Yellow Cedar (*Chamaecyparis nootkatensis*), Sitka Spruce (*Picea sitchensis*), Amabilis Fir (*Abies amabilis*), Red Alder (*Alnus rubra*), Garry Oak (*Quercus Garryana*), Broad-leaved maple (*Acer macrophyllum*), Cascara (*Rhamnus Purshiana*), Western Dogwood (*Cornus Nuttallii*), Madroña (*Arbutus Menziesii*).

Among the shrubs of the Coast Belt, mention may be made of Red-flowered Currant (*Ribes sanguineum*), Salmon Berry (*Rubus spectabilis*), Indian Plum (*Osmaronia cerasiformis*), Salal (*Gaultheria Shallon*), Red Bilberry (*Vaccinium parvifolium*), and others.

Some characteristic herbs of the coast are Western Buttercup (*Ranunculus occidentalis*), Cut-leaved Gold Thread (*Coptis asplenifolia*), Vanilla Leaf (*Achlys triphylla*), Many-flowered Dutchman's Breeches (*Dicentra formosa*), Three-leaved Coolwort (*Tiarella trifoliata*), Deer Cabbage (*Menyanthes Crista-galli*), and various others.

The Dry Belt has likewise quite a number of species peculiar to that area, but the only characteristic tree is the Ponderosa Pine (*Pinus ponderosa*).

Few shrubby species are confined to the Dry Belt, the chief being Antelope Brush (*Purshia tridentata*) and Sage-brush (*Artemisia tridentata*).

The characteristic herbaceous vegetation of the Dry Belt is mostly xerophytic, such as Bunch Grass (*Agropyron spicatum*), Bitter Root (*Lewisia rediviva*), Bladderpod (*Lesquerella Douglasii*), Woolly-Gromwell (*Lithospermum pilosum*), Perennial Gilia (*Gilia aggregata*), Balsam-root (*Balsamorhiza sagittata*), and many other species of Stick-leaf (*Mentzelia*), Lupin (*Lupinus*), etc.

Various species of alpine plants occur between the limit of tree growth and the region of perpetual snow. As mentioned previously, many of these occur also in the Arctic Region. There are, however, in the Western Region about 30 species of alpine plants which do not occur elsewhere in Canada. Of these some are shrubs, such as Alpine Willow (*Salix nivalis*), Red Heather (*Phyllodoce empetriformis*), Moss Heather (*Cassiope Mertensiana*), while herbs are represented by Alpine Hair-grass (*Deschampsia alpicola*), White Marsh-marigold (*Caltha leptosepala*), several species of Saxifrage (*Saxifraga*), Mountain Pink (*Douglasia nivalis*), Whorled Greek Valerian (*Polemonium confertum*).

The most comprehensive account of the plants of the Western Region is that of Henry,⁷ who describes 2,190 native and introduced species of vascular plants. The work by Brown and Schäffer,⁸ which includes also the Selkirk mountains, enumerates 438 species of ferns and their allies and seed-plants, exclusive of grasses, sedges, and willows, which are not mentioned. Miss Farr's list¹³ contains 38 species of ferns and allied plants and 725 species of seed-plants. The flora of Yoho Park has been investigated by Ulke,¹² who records 565 species of vascular plants. David-

son⁵⁴ lists several hundred species from the Skagit River basin, Dryas island, Windermere, Garibaldi mountain, and other localities. Whitford and Craig⁵⁵ give a detailed description accompanied by maps of the distribution of 22 species of coniferous and 26 species of deciduous forest trees.

The outlying islands have been dealt with by Osgood,⁵⁶ who enumerates 7 species of ferns and 118 species of seed-plants as occurring on Queen Charlotte islands. From a comparatively small area of Vancouver island, Glendenning⁵⁷ has enumerated 23 species of ferns and their allies, 13 species of gymnosperms and 547 species of angiosperms. Kermode's list⁵⁸ for the two main island groups includes 57 species of ferns and allied groups and 1,359 species of seed-plants. Of the latter, 284 species were introduced. Of the total species mentioned by Kermode, 19 species of ferns and their allies and 258 species of seed-plants occurred on the Queen Charlotte group.

Section 2.—Cryptogams.

NOTE.—A brief description of the different groups of Cryptogams with their distinguishing characteristics has already been given under "Classification of Flora", pp. 35 to 37.

Ferns and Allied Groups.

There are in Canada 25 genera of ferns (in the proper sense) and 2 of water-ferns. In the two groups combined there are about 76 species. One genus with a single species, namely, *Curly Grass* (*Schizaea pusilla*) characteristic of the pine barrens of New Jersey, is found in the province of Nova Scotia only. Another rare species, the Hart's Tongue (*Scolopendrium vulgare*) occurs only on limestone rocks in New Brunswick and at a few places in Ontario. Three genera are confined to the Western Region and include the Deer-fern (*Lomaria spicata*), 2 species of Lip-fern (*Cheilanthes*), and the Gold-fern (*Pityrogramma triangularis*).

Several species of ferns have a range extending into the Arctic Region, such as *Cryptogramma acrostichoides*, *Polystichum Lonchitis*, *Dryopteris fragrans*, *Cystopteris fragilis*, and 3 species of *Woodsia*.

The group of water-ferns comprises 2 genera with one species in each, namely, *Azolla caroliniana* found in lake Ontario and British Columbia, and *Marsilea vestita* which occurs in the Prairie Provinces.

The horsetail group includes about 13 species, one of which, the Giant Horsetail (*Equisetum giganteum*) is confined to the coastal area of British Columbia. *Equisetum scirpoides* and 3 other species range into the Arctic Region.

The other genera of the allied groups are *Lycopodium* with 12 species, *Selaginella* with 9 species, and *Isoteles* with 8 species. *Lycopodium selago* and *L. annotinum* reach the Arctic Region.

A fuller account of the fern group will be found in the description by Macoun and Burgess.⁵⁹

Mosses.

This group of plants is well represented in the Canadian flora, the most complete account of their distribution being that of Macoun and Kindberg⁶⁰ who list the names of 1,087 Canadian species. While mosses are most abundant in the southern parts of the Dominion, a considerable number occur also in the Arctic Region. Hesselbo⁶¹ mentions 39 genera and 67 species, of which 13 species are additions to the list of Macoun and Kindberg. In reference to one of these species, *Cinclidium latifolium* Lindb., Hesselbo states that it was collected on Vansittart island where it seemed to occur abundantly but hitherto had been found only in

the Yenisei region of northern Siberia in about latitude 69°-70° N. and in glacial deposits in northern Jutland at a depth of about 83 metres below the ground. Williams⁶² enumerates 68 species from the Arctic Region, of which 11 species (all sterile) belonged to the genus *Drepanocladus*, while *Bryum* was represented by 9 species, of which 5 were fruiting.

One of the most important lists is that of Dupret and Beaulac⁶³ for the region around Montreal containing 255 species, one of which, *Bryum camptoneurum* Card. and Thér., was hitherto undescribed. Another extensive list is that of Miss Brown⁶⁴ who records 346 species from Nova Scotia, of which one was a species new to science and two others had not been found previously in Canada.

Liverworts.

In this group, likewise, Macoun's Catalogue⁶⁵ is the most important work to show the distribution, 163 species being enumerated. Although these plants find a more congenial environment in warmer climates, nevertheless, Hesselbo's list⁶⁶ mentions 11 genera and 15 species as occurring in the Arctic Region, 4 of which species are not included in Macoun's Catalogue. For Nova Scotia, Miss Brown's list⁶⁴ includes 119 species of which 4 are new to Canada and 2 are new to North America.

For Western Canada, the chief authority on the distribution of this group is Brinkman⁶⁶ who has listed 254 species for the territory bordering on the Pacific. Among these, 39 species occurred in Yukon, 186 species in British Columbia, and 105 species in Alberta.

Lichens.

Unlike liverworts, the members of this group exhibit a great variety of habitats, some occurring on the surface of the ground, or on the bark of trees, or on bare rocks, or even on old bones. Being able to withstand a much more rigorous climate, they form an important element in the vegetation of the barren lands. Macoun in his Catalogue⁶⁵ enumerates 421 Canadian species, but since that date, with few exceptions, the study of this group has been largely neglected. And yet they are of decided economic importance particularly in the more northern parts, where they constitute the chief food of reindeer and caribou during the winter months.

As might be expected from the foregoing remarks, the lichens are well represented in the Arctic Region, the crustaceous species, according to Merrill,⁶⁷ being best developed, while the foliaceous and fruticose types are mostly dwarfed and infertile. With reference to the tundra formations, he states that "in many places through the Barren Ground region and the Alaskan peninsula the ground is covered to the depth of a foot or more with the debris of successive generations of lichens and mosses of which only the uppermost layer is living". Of the 80 species and 13 varieties listed by Merrill, he states that most of them may be expected to occur in alpine situations of Alberta and British Columbia, but 3 species, namely, *Cetraria chrysantha*, *Polyblastia scotinospora*, and *Verrucaria striatula*, appear to be exclusively Arctic.

Lyngbe's report on lichens collected during the Thule Expedition⁶⁸ included the names of 28 genera and 99 species. Of these, 55 species were not included in Macoun's Catalogue, a fact which goes to show that many species of lichens still remain to be discovered in this country. Lyngbe further added that it is hardly probable that the collection of 99 species covers as much as one-third of the whole lichen flora of the region.

A list entitled "The Lichens of Manitoba" containing the names of 90 species was published by K. S. Wright as a special chapter in "The Fungi of Manitoba".⁶⁹

Fungi.

Regarded from a consideration of the number of species contained within it, this is doubtless by far the largest subdivision of the plant kingdom in Canada. A realization of this fact is probably the reason why no census list of the species found in the Dominion has ever been published. Consequently only sectional lists for various parts of the country can be referred to here.

The chief descriptive work dealing with the larger forms is that of Güssow and Odell⁷⁰ in which the characteristic features of 62 genera and 174 species are outlined accompanied by numerous photographs. Fraser⁷¹ has described the characters of the various developmental stages of 104 species of rusts occurring in Nova Scotia. The distribution of fungi in this province has also been indicated by MacKay^{72,73} in two lists of considerable length and more recently in a series of three papers by Wehmeyer and his associates.⁷⁴ The general list of Hay⁷⁵ for New Brunswick contains the names of 66 species of the larger saprophytic forms.

For the province of Quebec, Campbell⁷⁶ has enumerated 129 species all of which, except 4 species of *Ascomycetes*, belong to the *Basidiomycetes*, while Pomerleau⁷⁷ has described the characters and distribution of 32 species of *Pyrenomycetes* for the same province.

For the region around Ottawa, including parts of the provinces of Quebec and Ontario, Odell⁷⁸ has published a somewhat extensive list including 338 species of *Basidiomycetes*, 42 species of *Ascomycetes*, and one species of *Myxomycetes*. In contrast with the foregoing, a list of 28 genera and 110 species and varieties of *Myxomycetes* has been described for the province of Ontario by Currie,⁷⁹ the largest genus being *Physarum* with 20 species.

For the province of Manitoba a comprehensive list of 1,989 species (including bacteria and *Myxomycetes*) has been published by Bisby and associates.⁸⁰ Not only are the substrata indicated on which the saprophytic species occur, but also the hosts of the parasitic species. There is in addition a list of fungi observed on man and the higher animals.

A further contribution to the study of rusts in Canada is that of Fraser and Connors⁸⁰ who have recorded the occurrence, with names of hosts, of 161 species in the Prairie Provinces.

A total of 131 species has been recorded by Dearness⁸¹ and others for the Arctic Region together with the host plants or substrata on which they occur. No *Myxomycetes* or *Phycomycetes* are mentioned and only 9 species of rusts and one of the smut group. The others are distributed as follows: 58 species of *Ascomycetes*, 36 species of *Basidiomycetes*, and 27 species of *Fungi imperfecti*.

Algae.

Comparatively few persons realize how great is the economic importance of this group of plants. It is well known in the case of the higher animals that in the last analysis their food supply consists of plants, but probably it is not so evident in the case of aquatic animals, such as fishes, seals, porpoises, whales, etc. The larger specimens prey on the smaller and these in turn live on crustaceans, etc., and finally a point is reached where the very minute species live on microscopic plants such as diatoms. In this connection Lowe⁸² states: "The phytoplankton of

the lakes of Central Canada has an economic interest as well as a biological interest. The fisheries of Manitoba are justly claimed to be the largest fresh-water fisheries in the world. Last year (1923) the fish taken from lake Winnipeg alone weighed 7,213,900 pounds, and this was not a record year".* From these figures one can draw certain conclusions as to what the total might be for all the lakes and rivers on the earth's surface. Then there are the countless miles of sea coast (not to speak of deeper water) where fish find shelter as well as food and where the larger seaweeds have various industrial uses, being used as food, or as manure for growing crops, or for other purposes.

As in the case of fungi, no general list of algæ, either fresh-water or marine, has up to the present been compiled for Canada. But a considerable amount of attention has been devoted to the elucidation of both groups as a glance at the various papers mentioned in the literature dealing with the subject will show.

As practically all the species of algæ occurring in fresh water are different from those found in the sea it is more convenient to consider both groups from the point of view of the medium in which they grow. Before dealing with their distribution reference may be made to two other groups which are frequently classified as algæ, namely, *Characeae* and *Diatomaceae*.

Characeæ.—The Stoneworts, as the *Characeae* are popularly called, owing to the fact that many species have a deposit of lime in their tissues which makes them brittle, are confined to fresh water. They can be readily recognized by their odour which resembles that of garlic. Very little attention has been devoted to their study in this country but 2 genera, namely, *Chara* and *Nitella* are known to occur. Apparently the only accounts dealing with their distribution in detail are those of Robinson⁸³ who mentions 11 species of *Chara* as Canadian, and the earlier work of Allen.⁸⁴

Diatomaceæ.—Diatoms are found both in fresh water and in the sea, the species occurring in the two habitats being with few exceptions quite different. The most comprehensive list of diatoms, both fresh-water and marine, so far published is that of Bailey⁸⁵ who states: "to prepare anything like a complete list of the diatoms of Canada is an impossibility. Not only is the region of enormous extent, embracing the whole breadth of America where that breadth is the greatest and extending northwards into Arctic regions, but it also presents a great diversity of physical conditions to which these plants, notwithstanding their minuteness and comparatively simple structure, must, like other plants, respond to a greater or less degree. Some of the interior lakes of Canada, like the Quill lakes in Saskatchewan, are saline, and in these quite a number of typically marine genera have been met with in great abundance". Bailey further states that up to 1907 probably not over a hundred species have been listed and these only from Nova Scotia and New Brunswick, while the present list contains the names of 550 species. These are grouped under 98 genera of which the largest by far is *Navicula* with 169 species, followed by *Nitzschia*, *Surirella*, and *Coscinodiscus*, with 48, 32, and 29 species, respectively.

A list of marine diatoms from the Arctic Region identified by Mann⁸⁶ contained names of 42 genera and 227 species. Of these *Navicula* was the largest genus with 64 species, while *Coscinodiscus* contained 23 species.

* According to the latest figures compiled by the Dominion Bureau of Statistics the weight of fish taken from lake Winnipeg in 1935 was: summer, lake Winnipeg, 7,079,500 lb.; winter, lake Winnipeg and Red river, 5,140,200 lb.; total, 12,219,700 lb.

The report by Howe⁵⁷ for Hudson bay mentions 57 species. Other diatoms occurring in fresh water in various districts are referred to in the next section on the fresh-water group.

Fresh-Water Algae.—The first publication to call attention to this group is that of Kemp⁵⁸ in 1858. But for over half a century from this date little or no attention was devoted to these plants. In more recent times one of the chief lists for Eastern Canada is that of Miss Clare Miller,⁵⁹ who described the characters of 54 species and varieties occurring in the vicinity of Montreal.

Another important paper dealing also with the province of Quebec is that of Lowe⁶⁰ in which were included 12 species of *Flagellata*, 3 species of *Peridineae*, 27 species of *Cyanophyceae*, 61 species of *Diatomaceae*, 199 species of *Chlorophyceae*, and 3 species of *Rhodophyceae*, representing altogether 305 species and 128 genera. The above list included 115 species of desmids. The 3 red species were *Batrachospermum vagum*, *Chantransia scotica*, and *Lemanea torulosa*.

Klugh⁶¹ has published several lists of algae for Georgian bay and various other districts in Ontario.

The region lying mainly between the Lake of the Woods and lake Winnipeg has been investigated by Lowe⁶² whose report includes 9 species of *Flagellata*, 3 species of *Peridineae*, 22 species of *Cyanophyceae*, 40 species of *Diatomaceae*, 170 species of *Chlorophyceae*, representing altogether 100 genera with 244 species. Of the *Chlorophyceae*, more than half, namely, 91 species, are desmids, the genera *Cosmarium* and *Staurastrum* each having 25 species.

Taylor's two lists^{63,64} for British Columbia included 55 species of *Cyanophyceae*, 34 species of *Chlorophyceae*, one species of *Flagellata*, and 2 species of *Rhodophyceae*, namely, *Lemanea fucina* and *Batrachospermum moniliforme*. Among the *Chlorophyceae* was the species known as Red Snow (*Chlamydomonas nivalis*). Taylor has also published another important paper⁶⁵ on the alpine species of British Columbia.

The desmids of British Columbia have been studied by Wailes⁶⁶ who has recorded 267 species collected in the coastal area, including the Vancouver district, the Nanaimo district, Gabriola island, and Cortes island. The largest genera mentioned are *Cosmarium* with 79 species, *Staurastrum* with 61 species, and *Closterium* with 35 species.

For the Arctic Region, Lowe⁶⁶ recorded the occurrence of 19 species of *Cyanophyceae*, 105 species of *Chlorophyceae* including 69 species of desmids of which the genera containing most species were *Cosmarium* and *Staurastrum*. There was also one species of *Flagellata*, namely, *Synura Uvella*, and one red species, namely, *Batrachospermum vagum*, and 41 species and varieties of diatoms.

Marine Algae.—The seaweeds found on the Atlantic coast of Canada present a striking contrast with those occurring in similar latitudes on the shores of Europe, especially as regards the number of genera and species. The Canadian species are mostly those found in colder waters, while in Europe the greater abundance of marine species is due to the mitigating influence of the Gulf Stream. While a considerable number of species in all the colour-groups are common to both sides of the Atlantic, such as *Chaetomorpha Melagontium*, *Ascophyllum nodosum*, *Chorda Filum*, *Chondrus crispus*, *Corallina officinalis*, etc., on the other hand, many European genera are entirely absent. In the green group one misses *Codium* and *Derbesia*, while among the brown species there are no representatives of such genera as *Pelvetia*, *Halidrya*, *Cystoseira*, *Dictyopteris*, *Padina*, etc. In the red group the missing genera, such as *Nitophyllum*, *Catenella*, *Griffithsia*, *Sphaerococcus*, etc., are even more numerous.

By way of contrast, a number of species occur on this side of the Atlantic only, such as the Sea Colander (*Agarum Turneri*), *Saccorhiza dermatodea*, *Ptilota pectinata*, etc. Many Arctic species, such as *Rhizoclonium riparium*, *Desmarestia aculeata*, *Odonthalia dentata*, etc., are found also on the Atlantic coast. Others, such as *Alaria membranacea*, *Polysiphonia arctica*, *Lithothamnion glaciale*, are exclusively Arctic, while other Arctic species, such as *Rhodomela Larix*, occur also on the Pacific coast of Canada.

The algal vegetation of the Pacific coast resembles that of the European Atlantic coast in the number of species belonging to the red group, doubtless owing to the warmer water, but there the comparison ends, for the species are mostly different. The same is largely true of the brown group in which many of the genera are also different, as in *Postelsia palmaeformis*, *Macrocystis pyrifera*, *Nereocystis Luetkeana*, some of which reach gigantic proportions.

One of the first lists of species to be compiled was that of Hay and MacKay⁹⁷ for the Maritime Provinces in which the distribution was shown of 4 species of *Cyanophyceae*, 15 species of *Chlorophyceae*, 31 species of *Phaeophyceae* and 33 species of *Rhodophyceae*.

Another more recent list by Bell and MacFarlane⁹⁸ for the same region included 24 species of *Chlorophyceae*, 39 species of *Phaeophyceae*, and 46 species of *Rhodophyceae*. For the Arctic coasts, Kjellman⁹⁹ mentions one species of *Cyanophyceae*, 8 species of *Chlorophyceae*, 15 species of *Phaeophyceae*, and 19 species of *Rhodophyceae*. That these figures do not truly represent the total marine flora is evident from the fact that Kjellman records 72 other species found on the west Greenland coast, most of which doubtless occur also in Arctic Canada.

Another Arctic list is that of Collins and his associates,⁹⁷ which includes a total of 53 species for the four colour-groups of which two species were previously undescribed. A separate list for Hudson bay by Howe⁹⁵ contained the names of 42 species (one being new) belonging to the four chief groups, together with 57 species of *Diatomaceae*.

For the Pacific coast of Canada, Collins¹⁰⁰ has recorded 40 species of *Chlorophyceae*, 45 species of *Phaeophyceae*, and 114 species of *Rhodophyceae*. As compared with the list for the Maritime Provinces, the preponderance of species belonging to the red group, as the result of higher temperature of the water, is very evident. Of the total species occurring on the coast of Vancouver island, Collins states that 38 p.c. of the brown and 25 p.c. of the red occur also on the Atlantic coast.

The various papers by Setchell and Gardner¹⁰¹ include the names of all species found on the coast from Alaska to California. It is noteworthy that several brown species such as *Postelsia palmaeformis*, *Pterygophora californica*, *Egregia Menziesii*, and *Pelvetiopsis limolata* find their northern limit on the southern coast of Vancouver island.

PART V.—FAUNAS OF CANADA.

An article under this heading, by Rudolph M. Anderson, Ph.D., Chief, Division of Biology, Department of Mines and Resources, appeared at pp. 29-52 of the 1937 Year Book.

PART VI.—LANDS, SCENIC, AND GAME RESOURCES OF CANADA.

Canada is distinctly a new country, and her resources are for the most part in the early stages of development. The fur, fishery, and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur farming or the establishment of fish hatcheries.

Numerous surveys and investigations of the extent and value of the resources have been made and broad outlines of the resources of the provinces supplement the information on physical geography given on pp. 1 to 16. Detailed information regarding individual natural resources will be found in the later chapters—Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

The treatment of resources considered below is concerned only with those phases of the subject which can be properly regarded as falling under the definition of physiography used in its wider interpretation, and which do not specifically relate to individual subjects treated elsewhere in this volume. A classification of lands resources (where there is naturally overlapping since much land suitable for agriculture remains under forest cover), information on the National Parks, and resources in game and scenery properly fall under this head.

Lands Resources.—Table 1 presents a broad classification of the potential lands resources of Canada, by provinces. The figures are, in the main, based on estimates prepared by the Dominion Forest Service, Lands, Parks, and Forests Branch, and by the Surveyor General and Chief, Hydrographic and Map Service of the Surveys and Engineering Branch, Department of Mines and Resources; they show how the total land area of Canada is made up as between existing and potential agricultural lands, existing and potential forest lands, and lands which are unproductive as regards surface resources. Between the totals of existing and potential agricultural lands and the totals of existing and potential forest lands there is, of course, duplication to the extent of the agricultural lands under forest.

1.—Land Area of Canada, Classified as Agricultural, Forested, or Unproductive.

NOTE.—The land area of Canada is shown classified by tenure in Chapter XXVIII.

Description.	Prince Edward Island.	Nova Scotia.	New Brunswick.	Quebec.	Ontario.	Mani- toba.

¹ Total agricultural land plus forested land, minus forested agricultural land.² Includes open muskeg, rock, road allowances, urban land, etc.³ An estimate from provincial sources places the total area of land suitable for tillage at 6,680 sq. miles.

National Parks of Canada.*—The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Bureau, Lands, Parks, and Forests Branch of the Department of Mines and Resources, which administers the scenic and recreational parks set aside for this purpose. Under the supervision of this same body are the national wild-animal preserves—large fenced areas established for the protection and propagation of species in danger of extinction—the national historic parks, and the historic sites of great national interest which have been acquired throughout the country (see pp. 78 to 90).

The mountain parks include regions of unsurpassed grandeur in the Rocky and Selkirk mountains of Western Canada. Among these are the Banff, Jasper, and Waterton Lakes National Parks in Alberta, located on the eastern slopes of the Rockies; the Kootenay and Yoho parks in British Columbia on the western slopes of the Rockies; and the Glacier and Mount Revelstoke Parks, also in British Columbia, located in the Selkirks. While these parks have a general resemblance to each other, each possesses individual characteristics, varying flora and fauna, and different types of scenery.

Prince Albert National Park in Saskatchewan forms a typical example of the lake country bordering the northwestern prairies, and the Riding Mountain National Park in Manitoba, having a general elevation of 2,000 feet above sea-level, contrasts sharply with the fertile plains to the east. In Ontario are located three small park units, the Point Pelee, Georgian Bay Islands, and the St. Lawrence Islands National Parks, which were established primarily as recreational areas. Fort Anne National Park in Nova Scotia and Fort Beauséjour National Park in New Brunswick, surrounding sites notable in early Canadian history.

A recent addition to Canada's National Park system is the Cape Breton Highlands National Park, an area of 458 square miles, situated on the northern limits of Cape Breton island, Nova Scotia. An area of approximately 10 square miles has also been set aside as a national park on the north shore of Prince Edward island.

The special animal parks were established for the protection of such vanishing species of mammalian wild life as the buffalo, wapiti (elk), and pronghorned antelope, which now thrive under natural conditions in large enclosures especially suited to their requirements. These parks include the Buffalo and Elk Island parks in Alberta, which contain large herds of buffalo, elk, moose, and deer, and the Nemiskam and Wawaskesey parks also in Alberta, which form sanctuaries for the pronghorned antelope.

In the national parks all wild life is given rigid protection and primal natural conditions are maintained as far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by park wardens who are responsible for the necessary game and forest patrols. Recreational facilities are many and varied, and in some parks natural attractions have been augmented by the provision of golf courses, tennis courts, swimming pools, bath-houses, and other features. A number of the parks also possess well-equipped motor camp grounds, which are available to visitors desiring this type of accommodation.

The national parks of Canada are accessible either by railway or motor highway. In addition to being served by the Canadian Pacific or Canadian National

* Prepared under the direction of F. H. H. Williamson, Controller, National Parks Bureau, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

Railway systems, most of the parks are either traversed by or linked up with the main arteries of motor travel. More than 600 miles of all-weather motor roads have been built by the National Parks Bureau, which have been instrumental in opening up many of the outstanding beauty spots, while other regions have been made accessible by the construction of more than 2,000 miles of trails.

Migratory Birds Treaty.—This treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources. The treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Ottawa.

Provincial Parks.—In addition to the national parks throughout Canada administered by the Dominion Government, most of the provinces also maintain provincial parks for the protection of wild life and as recreational areas. Among the largest of these are the Algonquin Park (2,740 square miles) in Ontario, and the Laurentides Park (3,565 square miles) in Quebec.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1937.

(Twenty-two in number with a total area of 29,831 square miles.)

Park.	Location.	Date Established.	Area. sq. miles.	Characteristics.
Scenic Parks.				
Banff	Western Alberta, on east slope of Rockies.	1885	2,585-00	Mountain playground containing two famous resorts—Banff and Lake Louise. Massive ranges, upper slopes bare and worn, or glacier crowned, lower slopes covered with luxuriant forests and flowered alplands; glacier-fed lakes. Wild deer, goat, sheep, elk, etc. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing, skiing, skating, curling.
Yoho	Eastern British Columbia, on west slope of Rockies.	1886	507-00	Rugged scenery on west slope of Rockies; Kicking Horse valley; lofty peaks, large number with permanent ice-caps or glaciers; famous Yoho valley with numerous waterfalls, one over 1,200 feet in height. Natural bridge, Emerald lake, lakes O'Hara and McArthur.
Glacier	Southeastern British Columbia, on the summit of the Selkirk range.	1886	521-00	Massive formations of the old Selkirk range; luxuriant forests, alpine flower gardens. Centre for alpine climbers. Illecillewaet and Asulkan glaciers and valleys; Nakimu caves. Marion lake, Rogers and Baloo passes.
Mount Revelstoke	Southeastern British Columbia, on the summit of mount Revelstoke.	1914	100-00	Nineteen-mile drive up Mt. Revelstoke affording panoramic views of the Columbia and Illecillewaet valleys, Clachnau-dainn ice-field, lakes Tova and Miller. Game sanctuary and winter sports resort.
Kootenay	Southeastern British Columbia, along Banff-Windermere highway.	1920	587-00	Park extends five miles on each side of Vermilion-Sinclair section of Banff-Windermere highway. Deep canyons, Iron Gates, Briscoe range, Sinclair canyon, famed Radium Hot Springs. Bear, deer, caribou, and Rocky Mountain sheep.

3.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1937—continued.

Park.	Location.	Date Established.	Area. sq. miles.	Characteristics.
Scenic Parks—con.				
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200-00	Immense mountain wilderness, rich in historical associations. Numbers of unclimbed peaks; glaciers, snowfields, canyons, lakes of wonderful colouring; Athabasca valley, Maligne lake, Mount Edith Cavell; Miette Hot Springs; big game sanctuary. Recreation—alpine climbing, riding, swimming, golf, tennis, motoring, fishing.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	220-00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls, trout fishing, camping, Government golf course.
St. Lawrence Islands.	In St. Lawrence river between Morrisburg and Kingston, Ontario.	1904	185-60 (acres)	Thirteen islands among the "Thousand Islands" in the St. Lawrence river. Recreational area, camping, fishing.
Point Pelee.....	Southern Ontario, on lake Erie.	1918	6-04	Most southerly mainland point in Canada, 41° 54' N. Resting place of many migratory birds; unique flora. Recreational area, camping, bathing.
Georgian Bay Islands (including Flowerpot Island Reserve)	In Georgian bay, near Midland, Ontario.	1920	5-37	Thirty islands in Georgian Bay; Beausoleil, largest of the group, is a popular bathing resort. Fine bathing beaches, beautiful groves of trees, varied bird and plant life. Flowerpot island, at head of Bruce peninsula, has interesting limestone formations and numerous caves.
Riding Mountain.....	Southwestern Manitoba, west of lake Winnipeg.	1920	1,145-04	Rolling woodland country in western Manitoba dotted with several beautiful lakes. Natural home of big game including one of the largest herds of wild elk in Canada. Summer resort, fine bathing and camping, Government golf course.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,869-00	Forest country of northwestern Canada, birch, spruce, jack pine, poplar; lakes and streams; moose, deer, bear, beaver, and interesting bird life. Excellent fishing—northern pike, pickerel, and lake trout; summer resort; sand beaches, campgrounds, Government golf course.
Cape Breton Highlands.	Northern part of Cape Breton island.	1936	453-00	Outstanding examples of rugged coast-line with mountain background. Magnificent views of Atlantic ocean and gulf of St. Lawrence.
Area in Prince Edward Island.	North shore of Prince Edward island.	1936	10-00 (approx.)	Strip approximately twenty miles long on north shore. Some of finest bathing beaches in Eastern Canada.
National Parks Tar Sands Reservation.	Alberta.....	1926	2,068-20 (acres)	Four areas comprising in all 2,068 acres in the Fort McMurray District, Alberta, have been reserved for the National Parks Branch to provide a supply of tar sands for road construction purposes in the National Parks.
Animal Parks and Reserves.				
Buffalo.....	Eastern Alberta, near Wainwright.	1908	197-50	Fenced enclosure; home of the Dominion Government buffalo herd. Over 5,000 buffalo, also moose, deer, elk, yak, and hybrids.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1937—concluded.

Park.	Location.	Date Established.	Area.	Characteristics.
			sq. miles.	
Animal Parks and Reserves—concl.				
Elk Island.....	Central Alberta, near Lamont.	1911	51.00	Fenced enclosure, containing over 2,000 buffalo, also moose, elk, and deer; recreational area, camping, bathing. Government golf course.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8.50	Fenced pronghorned antelope reserve, containing more than 300 head of this interesting animal, a species indigenous to the region.
Wawaskesy.....	Southeastern Alberta.	1922	54.00	Antelope reserve, as yet undeveloped.
Wood Buffalo ¹	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,525 sq. miles), west of Athabasca and Slave rivers.	1922	17,300.00	Forests interspersed with rivers and open plains. Dotted with innumerable lakes and streams. The home of the wood buffalo, moose, deer, caribou, bear, beaver; waterfowl abundant. Area as yet undeveloped.
Historic Parks.				
Fort Anne.....	Nova Scotia..... (Annapolis Royal)	1917	31.00 (acres)	National Historic Park—site of early Acadian settlement of Port Royal; museum containing interesting relics of early days and fine historical library.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	50.00 (acres)	National Historic Park—site of old French fort erected middle of 18th century. Renamed Fort Cumberland in 1755 by British; original name was later restored. Historical museum containing interesting exhibits.

¹ Reserved by Order in Council and became a Dominion reserve by agreement with the province of Alberta in 1931.

² Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands, Parks, and Forests Branch, Department of Mines and Resources.

Game and Scenery.—Canada's resources as a country for the sportsman and tourist are both unique and varied. Owing to the growth of tourist travel and its demands (the statistics of the tourist trade are dealt with in Chapter XVI as a phase of External Trade), great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. In the wooded and unsettled areas of every province there are many moose, deer, bear, and smaller game, while in the western parts of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear, and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the northwest and the far north there still exist herds of buffalo and musk-ox, which, however, are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. Franklin grouse are native to the mountains of the west and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

Canada is the natural habitat of many kinds of waterfowl and it is difficult to imagine any finer field for the shot-gun sportsman than is afforded by many of the myriad lakes which form so large a feature of Canadian scenery. This is particularly true of the three mid-western provinces, where the lakes are of the shallow, surface type that furnishes the most abundant feed for waterfowl.

The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Ontario and Quebec, northern Manitoba and Saskatchewan, as well as the mountain districts of British Columbia, offer to the tourist, the hunter and the fisherman new scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter and angler, at proper seasons, a wealth of game species.

PART VII.—CLIMATE AND METEOROLOGY.

Section 1.—The Climate of Canada.

An article on this subject by Sir Frederic Stupart, at that time Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

Section 2.—The Factors which Control Canadian Weather.

Under the above heading, Sir Frederic Stupart, at that time Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at pp. 26-31 of the 1924 edition of the Year Book, also at pp. 36-40 of the 1925 edition.

Section 3.—The Distribution of Precipitation in Canada.

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42-46 of the 1926 edition of the Year Book.

Section 4.—The Temperature and Precipitation of Northern Canada.

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41-56.

Section 5.—The Meteorological Service of Canada.

Under the above heading Sir Frederic Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43-47); to it the interested reader is referred.

Section 6.—Meteorological Tables.

Tables showing the normal temperature and precipitation at selected Canadian stations in each of the provinces, together with the recorded extremes, also the averages of sunshine, wind, and weather at such stations, will be found at pp. 51-63, inclusive, of the 1927-28 edition of the Year Book. The 1931 edition of the Year Book contains at pp. 48-76 additional and more comprehensive tables, contributed by A. J. Connor, of monthly average temperatures and precipitation throughout Canada, as well as of normal snowfall and duration of bright sunshine.

Times of Sunrise and Sunset in Canada.*—The table between pp. 68 and 69 gives the times of sunrise and sunset for places in latitudes 44°, 46°, 48°, 50°, and 52°. These latitudes cover what is pretty well the populated belt across Canada.

Times are given in mean solar time. The moment when the sun is over the meridian which passes through a certain place is not constant on any two consecutive days and a clock cannot be constructed to keep true meridian time. For this reason, mean or average time is used. It will be clear that no two places, unless they are exactly on the same meridian of longitude, have either the same meridian time or the same mean time. It follows that, for convenience in every-day life and to facilitate transportation schedules, a system of standard time has to be adopted.

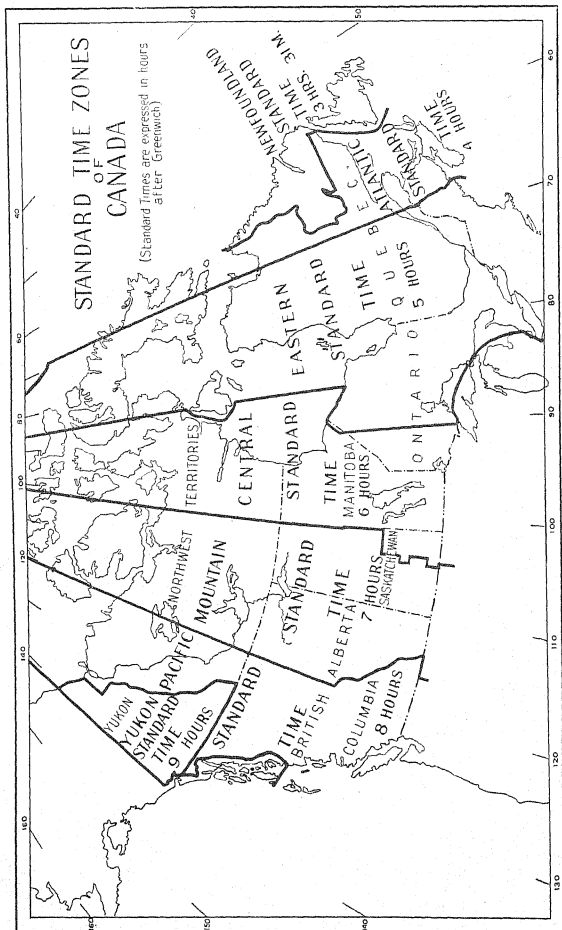

The surface of the earth is divided into belts each of which extends approximately 7½ degrees east and west of a central meridian whose local time is an exact number of hours from Greenwich time. These central meridians are, of course, 15°, 30°, 45°, etc. from Greenwich. On the ocean the boundaries of the belts are also true meridians, but on the land they are drawn to suit local circumstances. An examination of the map on page 67 will show this.

Within a certain belt or zone all the clocks are set to show the same time, and in passing from one such zone to another the hands of the clock are moved forward or backward one hour.

In Canada we have six standard time zones, as follows: the Atlantic (or 60th Meridian) Time Zone, which is 4 hours slower than Greenwich; the Eastern (or 75th Meridian) Time Zone, which is 5 hours behind Greenwich; the Central (or 90th Meridian) Time Zone, which is 6 hours behind; the Mountain (or 105th Meridian) Time Zone, which is 7 hours behind; the Pacific (or 120th Meridian) Time Zone, which is 8 hours behind; and the Yukon (or 135th Meridian) Time Zone, 9 hours slower than Greenwich. The boundaries of the zones are laid down in the Statutes of the several provinces and territories and are shown on the map.

Since, as stated, the tables are given in mean solar time for the five latitudes named, correction must be made, according to the following instructions, to change these times to standard or railroad times of cities and towns in the respective latitudes.

* By permission of the Royal Astronomical Society of Canada, the calculations facing p. 68 and instructions for correction given below are reproduced from *The Observers' Handbook*, 1931, published by the Society.

Instructions.—In order to find the standard time of sunrise and sunset for any place on any day, first, from the list below, find the approximate latitude of the place from its position in relation to one of the cities listed and the correction, in minutes, which follows the name. Then find in the monthly table the time of sunrise and sunset for the proper latitude, on the desired day, and apply the correction.

44°	46°	48°	50°	52°
min.	min.	min.	min.	min.
Barrie.....+17	Charlotte-	Port Arthur...+57	Brandon.....+40	Calgary.....+36
Brantford.....+21	town.....+13	Victoria.....+13	Indian Head.- 5	Edmonton.....+34
Chatham.....+29	Fredericton...+26		Kamloops....+ 2	Prince Albert..+ 4
Goderich.....+27	Montreal.....- 6		Kemora.....+18	Saskatoon.....+ 6
Guelph.....+21	Ottawa.....+ 3		Medicine Hat..+22	
Halifax.....+14	Parry Sound..+20		Moosejaw.....+ 2	
Hamilton.....+20	Quebec.....-15		Moosomin.....+40	
Kingston.....+ 6	Sherbrooke...-12		Nelson.....-11	
London.....+25	Saint John...+24		Portage la	
Orillia.....+15	Sydney.....+ 1		Prairie.....+23	
Owen Sound...+24	Three Rivers.-10		Regina.....- 2	
Peterboro.....+13			Vancouver....+12	
Port Hope.....+14			Winnipeg.....+23	
Stratford.....+24				
Toronto.....+18				
Windsor.....+32				
Woodstock....+23				
Yarmouth.....+24				

Example.—Find the time of sunrise at Owen Sound, also at Regina, on Feb. 11. In the above list Owen Sound is under "44°", and the correction is +24 min. On the table between pp. 68-69 the time of sunrise on Feb. 11 for latitude 44° is 7·05; add 24 min. and we get 7·29 (Eastern Standard Time). Regina is under "50°", and the correction is -2 min. From the table the time is 7·18 and subtracting 2 min. we get the time of sunrise 7·16 (Mountain Standard Time).

Section 7.—Droughts in Western Canada.

An article on the above subject by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, accompanied by diagrams and tables showing the precipitation and sun-spot incidence in the Prairie Provinces, appeared at pp. 47-59 of the 1933 edition of the Year Book.

Section 8.—Standard Time and Time Zones in Canada.

A summary, based on a paper "Standard Time and Time Zones in Canada" by C. C. Smith, Dominion Observatory, Ottawa, accompanied by a map diagram, appeared at pp. 50-53 of the 1934-35 edition of the Year Book.

CHAPTER II.—HISTORY AND CHRONOLOGY.

PART I.—HISTORY.

In the 1922-23 edition of the Canada Year Book, pp. 60-80, will be found an outline of the history of Canada, not reprinted here due to pressure on available space.

A select bibliography of historical works relating to Canada was contributed by the late Adam Shortt, C.M.G., LL.D., F.R.S.C., Chairman of the Historical Documents Publication Board, Ottawa, to the 1925 edition of the Canada Year Book, where it appears on pp. 53-55.

A special article "Canada on Vimy Ridge", prepared by Colonel A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Director of the Historical Section, Department of National Defence, was published on the occasion of the unveiling of the Vimy Memorial and appears on pp. 50-60 of the Canada Year Book, 1936.

PART II.—CHRONOLOGY, 1497 to 1938.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovered Hudson strait.
1501. Gaspar Corte Real visited Newfoundland and Labrador.
1524. Verrazano explored the coast of Nova Scotia.
1534. July 24, Jacques Cartier, on his first voyage, erected a cross at Gaspé, claiming the land for the King of France.
1535. Cartier's second voyage. He ascended the St. Lawrence to Stadacona (Quebec), (Sept. 14), and Hochelaga (Montreal), (Oct. 2).
1541. Cartier's third voyage. He planted wheat, cabbages, turnips, and lettuces near Cap Rouge river.
- 1542-3. De Roberval and his party wintered at Cape Rouge, and were rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1604. De Monts settled colony on island in the St. Croix river.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovered lake Champlain.
- 1610-11. Hudson explored Hudson bay and James bay.
1611. Brûlé ascended the Ottawa river.
1612. Oct. 15, Champlain made Lieutenant-General of New France.
1613. June, Champlain ascended the Ottawa.
1615. Champlain explored lakes Nipissing, Huron, and Ontario (discovered by Brûlé and Le Caron).
1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
1617. Arrival at Quebec of the first colonist, Louis Hébert and his family.
1620. Population of Quebec, 60 persons.
1621. Code of laws issued and register of births, deaths, and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. April 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.
- 1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.
1638. June 11, First recorded earthquake in Canada.
1640. Discovery of lake Erie by Chaumonot and Brébeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal), by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalumant by Indians and massacre of the Hurons.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple, and Crowne.
1659. June 16, François de Laval arrived in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa river.

1663. Company of 100 Associates dissolved. Feb. 5, severe earthquake. April, Sovereign Council of New France established. Population of New France, 2,500, of whom 800 were in Quebec. Foundation of the "Grand Seminary" at Quebec, by Laval.
1664. May, Company of the West Indies founded.
1665. Mar. 23, Talon appointed Intendant.
1666. Feb.-Mar., First census; population of New France, 3,215.
1667. July 21, Acadia restored to France by the Treaty of Breda. Sept.-Oct., Second census; white population of New France, 3,918.
1668. Foundation of the "Little Seminary" at Quebec by Laval. Mission at Sault Ste. Marie founded by Marquette.
1670. May 2, Charter of the Hudson's Bay Company granted.
1671. Population of Acadia, 441.
1672. Population of New France, 6,705. April 6, Comte de Frontenac, Governor.
1673. June 13, Cataract (Kingston) founded.
1674. Oct. 1, Laval became first Bishop of Quebec.
1675. Population of New France, 7,832.
1678. Niagara falls visited by Hennepin.
1679. Ship *Le Griffon* built on Niagara river above the falls by La Salle. Third census; population of New France, 9,400; of Acadia, 515.
1681. Fourth census; population of New France, 9,677.
1682. Frontenac recalled.
1683. Population of New France, 10,251.
1685. First issue of card money. Fifth census; population of New France, 12,263, including 1,538 settled Indians.
1686. Population of New France, 12,373; of Acadia, 885.
1687. Mar. 18, La Salle assassinated.
1688. Sixth census; population of New France, 11,562, including 1,259 settled Indians.
1689. June 7, Frontenac re-appointed Governor. Aug. 5, Massacre of whites by Indians at Lachine.
1690. May 21, Sir William Phips captured Port Royal, but was repulsed in an attack on Quebec (Oct. 16-21).
1692. Seventh census; population of New France, 12,431. Oct. 22, Defence of Verchères against Indians by Madeleine de Verchères.
1693. Population of Acadia, 1,009.
1695. Eighth census; population of New France, 13,639, including 853 settled Indians.
1697. Sept. 20, By the treaty of Ryswick, places taken during the war were mutually restored. D'Iberville defeated the Hudson's Bay Co.'s ships on Hudson Bay.
1699. Nov. 28, Death of Frontenac. Ninth census; population of New France, 15,355.
1701. La Motte Cadillac built a fort at Detroit.
1703. June 16, Sovereign Council of Canada became Superior Council and membership increased from 7 to 12.
1706. Tenth census; population of New France, 16,417.
1708. Death of Laval.
1709. British invasion of Canada.
1710. Oct. 13, Port Royal taken by Nicholson.
1711. Sept. 1, Part of Sir H. Walker's fleet, proceeding against Quebec, wrecked off the Seven Islands.
1713. April 11, Treaty of Utrecht; Hudson Bay, Acadia, and Newfoundland ceded to Great Britain. August, Louisbourg founded by the French. Population of New France, 18,119.
1718. Foundation of New Orleans in carrying out French plan to control the Mississippi as well as the St. Lawrence.
1719. Census population of New France, 22,530.
1720. Population of New France, 24,234; of Ile St. Jean (P.E.I.), about 100. April 25, Governor and Council of Nova Scotia appointed.
1721. June 19, Burning of about one-half of Montreal. Census population of New France, 24,951.
1727. Population of New France, 30,613.
1728. Population of Ile St. Jean (P.E.I.), 330.
1731. Population of the north of the peninsula of Acadia, 6,000.
1733. Discovery of lake Winnipeg by La Vérendrye.
1734. Road opened from Quebec to Montreal. Census population of New France, 37,716.
1737. Iron smelted on St. Maurice. French population of the north of the Acadia peninsula, 7,598.
1739. Census population of New France, 42,701.
1743. The younger La Vérendrye discovered the Rocky mountains.
1745. June 17, Taking of Louisbourg by Pepperell and Warren.
1748. Oct. 18, Treaty of Aix-la-Chapelle. Louisbourg restored to France in exchange for Madras.
1749. June 21, Founding of Halifax—British immigrants brought to Nova Scotia by Governor Cornwallis, 2,544 persons. Fort Rouillé (Toronto) built.
1750. St. Paul's Church, Halifax (oldest Anglican church in Canada), built.
1752. Mar. 25, Issue of the *Halifax Gazette*, first newspaper in Canada. British and German population of Nova Scotia, 4,203.
1754. Census population of New France, 55,009.
1755. Establishment at Halifax of first post office in what is now Canada, together with direct mail communication with Great Britain. June 16, Surrender of Fort Beauséjour on the isthmus of Chignecto to the British. Sept. 10, Expulsion of the Acadians from Nova Scotia.

1756. Seven Years' War between Great Britain and France began.
1758. July 26, Final capture of Louisbourg by the British. Oct. 7, First meeting of the Legislature of Nova Scotia.
1759. July 25, Taking of Fort Niagara by the British. July 26, Beginning of the siege of Quebec. July 31, French victory at Beauport Plats. Sept. 13, Defeat of the French on the Plains of Abraham. Death of Wolfe. Sept. 14, Death of Montcalm. Sept. 18, Surrender of Quebec.
1760. April 28, Victory of the French under Lévis at St. Foy. Sept. 8, Surrender of Montreal. Military rule set up in Canada.
1762. British population of Nova Scotia, 8,104. First British settlement in New Brunswick.
1763. Feb. 10, Treaty of Paris, by which Canada and its dependencies were ceded to the British. May, Rising of Indians under Pontiac, who took a number of forts and defeated the British at Bloody Run (July 31). Oct. 7, Civil government proclaimed. Cape Breton and Ile St. Jean annexed to Nova Scotia; Labrador, Anticosti, and Magdalen islands to Newfoundland. Nov. 21, General James Murray appointed Governor-in-Chief. Canadian post offices established at Montreal, Three Rivers, and Quebec.
1764. June 21, First issue of the *Quebec Gazette*. Aug. 13, Civil government established.
1765. Publication of the first book printed in Canada, "Catéchisme du Diocèse de Sens". May 18, Montreal nearly destroyed by fire. Population of Canada, 69,810.
1766. July 24, Peace made with Pontiac at Oswego.
1768. Charlottetown, Ile St. Jean (P.E.I.), founded. April 11, Great fire at Montreal. April 12, Sir Guy Carleton (Lord Dorchester) Governor-in-Chief.
1769. Ile St. Jean (P.E.I.) separated from Nova Scotia.
- 1770-72. Hearne's journey to the Coppermine and Slave rivers and Great Slave lake.
1773. Suppression of the order of Jesuits in Canada and escheat of their estates.
1774. June 22, The Quebec Act passed.
1775. May 1, The Quebec Act came into force. Outbreak of the American Revolution. Montgomery and Arnold invaded Canada. Nov. 12, Montgomery took Montreal; Dec. 31, was defeated and killed in an attack on Quebec.
1776. The Americans were defeated and driven from Canada by Carleton.
1777. Sept. 18, General Frederick Haldimand Governor-in-Chief.
1778. Captain Jas. Cook explored Nootka sound and claimed the northwest coast of America for Great Britain.
- June 3, First issue of the *Montreal Gazette*.
1783. Sept. 3, Treaty of Versailles, recognizing the independence of the United States. Organization of the Northwest Company at Montreal. Kingston, Ont., and Saint John, N.B., founded by the United Empire Loyalists.
1784. Population of Canada, 113,012. Aug. 16, New Brunswick and (Aug. 26) Cape Breton separated from Nova Scotia.
1785. May 18, Incorporation of Partrtown (Saint John, N.B.).
1786. April 22, Lord Dorchester again Governor-in-Chief. Oct. 23, Government of New Brunswick moved from Saint John to Fredericton.
1787. C. Inglis appointed Anglican Bishop of Nova Scotia—the first colonial bishopric in the British Empire.
1788. King's College, Windsor, N.S., opened. Sailing packet service restored between Great Britain and Halifax.
1789. Quebec and Halifax Agricultural Societies established.
1790. Spain surrendered her exclusive rights on the Pacific coast. Population of Canada, 161,311. (This census did not include what became, in the next year, Upper Canada.)
1791. The Constitutional Act divided the province of Quebec into Upper and Lower Canada, each with a lieutenant-governor and legislature. The Act went into force Dec. 26. Sept. 12, Colonel J. G. Simcoe, first Lieutenant-Governor of Upper Canada.
1792. Sept. 17, First Legislature of Upper Canada opened at Newark (Niagara). Dec. 17, First Legislature of Lower Canada opened at Quebec. Vancouver island circumnavigated by Vancouver.
1793. April 18, First issue of the *Upper Canada Gazette*. June 28, Jacob Mountain appointed first Anglican Bishop of Quebec. July 9, Importation of slaves into Upper Canada forbidden. Rocky mountains crossed by (Sir) Alexander Mackenzie, who reached the Pacific ocean. York (Toronto) founded by Simcoe.
1794. Nov. 19, Jay's Treaty between Great Britain and the United States.
1795. Pacific coast of Canada finally given up by Spaniards.
1796. Government of Upper Canada moved from Niagara to York (Toronto).
1798. St. John's island (Ile St. Jean, population 4,500) renamed Prince Edward Island.
1800. Founding of New Brunswick College, Fredericton (now University of N.B.). The Rocky mountains crossed by David Thompson.
1803. Settlers sent by Lord Selkirk to Prince Edward Island.
1806. Nov. 22, Issue of *Le Canadien*—first wholly French newspaper. Popula-

- tion—Upper Canada, 70,718; Lower Canada, 250,000; New Brunswick, 35,000; P.E.I., 9,676.
1807. Simon Fraser explored the Fraser river. Estimated population of Nova Scotia, 65,000.
1809. Nov. 4, First Canadian steamer ran from Montreal to Quebec.
1811. Lord Selkirk's Red River settlement founded on land granted by Hudson's Bay Company.
1812. June 18, Declaration of war by the United States. July 12, Americans under Hull crossed the Detroit river. Aug. 16, Detroit surrendered by Hull to Brock. Oct. 13, Defeat of the Americans at Queenston Heights and death of General Brock.
1813. Jan. 22, British victory at Frenchtown. April 27, York (Toronto) taken and burned by the Americans. June 5, British victory at Stony Creek. June 24, British, warned by Laura Secord, captured an American force at Beaver Dams. Sept. 10, Commodore Perry destroyed the British flotilla on lake Erie. Oct. 5, Americans under Harrison defeated the British at Moravian town. Tecumseh killed. Oct. 26, Victory of French-Canadian troops under de Salaberry at Châteauguay. Nov. 11, Defeat of the Americans at Crysler's Farm. British stormed Fort Niagara and burned Buffalo.
1814. Mar. 30, Americans repulsed at La Colle. May 6, Capture of Oswego by the British. July 5, American victory at Chippawa. July 25, British victory at Lundy's Lane. July, British from Nova Scotia invaded and occupied northern Maine. Sept. 11, British defeat at Plattsburg on lake Champlain. Dec. 24, Treaty of Ghent ended the war. Population—Upper Canada, 95,000; Lower Canada, 335,000.
1815. July 3, Treaty of London regulated trade with the United States. The Red River settlement destroyed by the Northwest Company but restored by Governor Semple.
1816. June 19, Governor Semple killed. The Red River settlement again destroyed.
1817. July 18, First Treaty with the Northwest Indians. Lord Selkirk restored the Red River settlement. Opening of the Bank of Montreal; first note issue Oct. 1. Population of Nova Scotia, 81,351. Rush-Bagot Convention with the United States, limiting naval armament on the Great Lakes, signed.
1818. Oct. 20, Convention at London regulating North American fisheries. Dalhousie College, Halifax, founded. Bank of Quebec founded.
- 1819-22. Franklin's overland Arctic expedition.
1820. Oct. 16, Cape Breton re-annexed to Nova Scotia.
1821. Mar. 26, The Northwest Company absorbed by the Hudson's Bay Company. Charter given to McGill College.
1822. Population of Lower Canada, 427,465.
1824. Population of Upper Canada, 150,066; of New Brunswick, 74,176.
1825. Oct. 6, Great fire in the Miramichi district, N.B. Opening of the Lachine canal. Population of Lower Canada, 479,288.
1826. Founding of Bytown (Ottawa).
1827. Sept. 29, Convention of London relating to the territory west of the Rocky mountains. Population of Nova Scotia (including Cape Breton), 123,630.
1828. The Methodist Church of Upper Canada separated from that of the United States.
1829. Nov. 27, First Welland canal opened. McGill University opened. Upper Canada College founded.
1831. June 1, The North Magnetic Pole discovered by (Sir) James Ross. Population—Upper Canada, 236,702; Lower Canada, 553,131; Assiniboia, 2,390.
1832. Outbreak of cholera in Canada. Incorporation of Quebec and Montreal. Bank of Nova Scotia founded. May 30, Opening of the Rideau canal.
1833. Aug. 18, The steamer *Royal William*, built at Quebec, crossed the Atlantic from Pictou to England.
1834. Feb. 21, The Ninety-Two Resolutions on public grievances passed by the Assembly of Lower Canada. Mar. 6, Incorporation of Toronto. Population of Upper Canada, 321,145; of New Brunswick, 119,457; of Assiniboia, 3,356.
1836. July 21, Opening of the first railway in Canada from Laprairie to St. John's, Que. Victoria University opened at Cobourg (afterwards moved to Toronto).
1837. Report of the Canada Commissioners. Rebellion in Lower Canada (Papineau) and Upper Canada (W. L. Mackenzie). Nov. 23, Gas lighting first used in Montreal.
1838. Feb. 10, Constitution of Lower Canada suspended and Special Council created. Mar. 30, The Earl of Durham, Governor-in-Chief. April 27, Martial law revoked. June 28, Amnesty to political prisoners proclaimed. Nov. 1, Lord Durham, censured by British Parliament, resigned. Population—Upper Canada, 339,442; Assiniboia, 3,966; Nova Scotia, 202,575.
1839. Feb. 11, Lord Durham's report submitted to Parliament. John Strachan ordained first Anglican Bishop of Toronto. Oct. 19, Charles Poulett Thomson (Lord Sydenham) arrived in Canada as Governor-in-Chief.
1840. July 23, Passing of the Act of Union. First ship of the Cunard line arrived at Halifax.
1841. Feb. 10, Union of the two provinces as the Province of Canada, with

- Kingston as capital. Feb. 13, Draper-Ogden Administration. April 10, Halifax incorporated. June 13, Meeting of the first United Parliament. Sept. 19, Death of Lord Sydenham. Population of Upper Canada, 455,668; of P.E.I., 47,042.
1842. Mar. 10, Opening of Queen's University, Kingston. Aug. 9, The Ashburton Treaty. Sept. 16, Baldwin-Lafontaine Administration.
1843. June 4, Victoria, B.C., founded. Dec. 12, Draper-Viger Administration. King's (now University) College, Toronto, opened.
1844. May 10, Capital moved from Kingston to Montreal. Knox College, Toronto, founded. Population of Lower Canada, 697,084.
1845. May 28 and June 28, Great fires at Quebec. Franklin started on his last Arctic expedition.
1846. May 18, Kingston incorporated. June 15, Oregon Boundary Treaty. June 18, Draper-Papineau Administration. First telegraph, operated by Toronto, Hamilton and Niagara Electro-Magnetic Telegraph Co., opened.
1847. May 29, Sherwood-Papineau Administration. Nov. 25, Montreal-Lachine Railway opened.
1848. Mar. 11, Lafontaine-Baldwin Administration. May 30, Fredericton incorporated. St. Lawrence canals opened to navigation.
1849. April 25, Signing of the Rebellion Losses Act; rioting in Montreal and burning of the Parliament Buildings. Nov. 14, Toronto made the capital. Vancouver island granted to the Hudson's Bay Company. Population of Assiniboia, 5,391.
1851. April 6, Transfer of the postal system from the British to the Provincial Government; uniform rate of postage introduced. April 23, Postage stamps issued. Aug. 2, Incorporation of Trinity College, Toronto. Sept. 22, Quebec became the capital. Oct. 28, Hinecks-Morin Administration. Responsible government granted to Prince Edward Island. Population—Upper Canada, 952,004; Lower Canada, 890,261; New Brunswick, 193,809; Nova Scotia, 276,854.
1852. July 8, Great fire at Montreal. Dec. 8, Laval University, Quebec, opened. Grand Trunk Railway chartered.
1853. Opening of Grand Trunk Railway from Montreal to Portland.
1854. June 5, Reciprocity Treaty with the United States. Sept. 11, MacNab-Morin Ministry. Seigneurial tenure in Lower Canada abolished. Secularization of the clergy reserves.
1855. Jan. 1, Incorporation of Ottawa. Jan. 27, MacNab-Taché Administration. Mar. 9, Opening of the Niagara Railway suspension bridge. April 17, Incorporation of Charlottetown. Oct. 20, Government moved to Toronto.
1856. The Legislative Council of Canada made elective. First meeting of the Legislature of Vancouver island. May 24, Taché-J. A. Macdonald Administration. Oct. 27, Opening of the Grand Trunk Railway from Montreal to Toronto. Population of Assiniboia, 6,601.
1857. Nov. 26, J. A. Macdonald-Cartier Administration. Dec. 31, Ottawa chosen by Queen Victoria as future capital of Canada.
1858. February, Discovery of gold in Fraser River valley. July 1, Introduction of Canadian decimal currency. Aug. 2, Brown-Dorion Administration. Aug. 5, Completion of the Atlantic cable; first message sent. Aug. 6, Cartier-J. A. Macdonald Administration. Aug. 20, Colony of British Columbia established. Control of Vancouver island surrendered by the Hudson's Bay Company.
1859. January, Canadian silver coinage issued. Sept. 24, Government moved to Quebec.
1860. Aug. 8, The Prince of Wales (King Edward VII) arrived at Quebec. Sept. 1, Laying of the corner-stone of the Parliament Buildings at Ottawa by the Prince of Wales. Prince of Wales College, Charlottetown, founded.
1861. Aug. 14, Great flood at Montreal. Sept. 10, Meeting of the first Anglican provincial synod. Population—Upper Canada, 1,396,091; Lower Canada, 1,111,566; New Brunswick, 252,047; Nova Scotia, 330,857; Prince Edward Island, 80,857.
1862. May 24, Sandfield Macdonald-Sicotte Administration. Aug. 2, Victoria, B.C., incorporated.
1863. May 16, Sandfield Macdonald-Dorion Administration.
1864. Mar. 30, Taché-J. A. Macdonald Administration. Conferences on confederation of British North America; Sept. 1, at Charlottetown; Oct. 10-29, at Quebec. Oct. 19, Raid of American Confederates from Canada on St. Albans, Vermont.
1865. Feb. 3, The Canadian Legislature resolved on an address to the Queen praying for union of the provinces of British North America. Aug. 7, Bellet-J. A. Macdonald Administration. Oct. 20, Proclamation fixing the seat of government at Ottawa.
1866. Mar. 17, Termination of the Reciprocity Treaty by the United States. May 31, Raid of Fenians from the United States into Canada; they were defeated at Ridgeway (June 2) and retreated across the border (June 3). June 8, First meeting at Ottawa of the Canadian Legislature. Nov. 17, Proclamation of the union of Vancouver Island with British Columbia.

NOTE.—*The Ministries, and the dates of elections and lengths of sessions of all Dominion Parliaments following Confederation are given in Tables 2 and 4, respectively, of Chapter III. Changes in Provincial Governments are indicated in Table 11 of that chapter. References regarding these matters have therefore been dropped from the chronology below.*

1867. Mar. 29, Royal Assent given to the British North America Act. July 1, The Act came into force; Union of the provinces of Canada, Nova Scotia and New Brunswick as the Dominion of Canada; Upper and Lower Canada made separate provinces as Ontario and Quebec; Viscount Monck first Governor General; Sir John A. Macdonald, Premier. Nov. 6, Meeting of the first Dominion Parliament.
1868. April 7, Murder of D'Arcy McGee at Ottawa. July 31, The Rupert's Land Act authorized the acquisition by the Dominion of the Northwest Territories.
1869. June 22, Act providing for the government of the Northwest Territories. Nov. 19, Deed of surrender to the Crown of the Hudson's Bay Company's territorial rights in the Northwest. Outbreak of the Red River Rebellion under Riel.
1870. May 12, Act to establish the province of Manitoba. July 15, Northwest Territories transferred to the Dominion and Manitoba admitted into Confederation. Aug. 24, Wolseley's expedition reached Fort Garry (Winnipeg); end of the rebellion.
1871. April 2, First Dominion Census (populations at this and succeeding enumerations given on p. 126). April 14, Act establishing uniform currency in the Dominion. May 8, Treaty of Washington, dealing with questions outstanding between the United Kingdom and the United States. July 20, British Columbia entered Confederation.
1873. May 23, Act establishing the North West Mounted Police. July 1, Prince Edward Island entered Confederation. Nov. 8, Incorporation of Winnipeg.
1874. May, Ontario Agricultural College, Guelph, opened.
1875. April 8, The Northwest Territories Act established a Lieutenant-Governor and a Northwest Territories Council. April-May, Letting of first contract and commencement of work upon the Canadian Pacific railway as a Government line; work commenced at Fort William. June 15, Formation of the Presbyterian Church in Canada.
1876. June 1, Opening of the Royal Military College, Kingston. June 5, First sitting of the Supreme Court of Canada. July 3, Opening of the Intercolonial Railway from Quebec to Halifax. Branch of Laval University established at Montreal.
1877. June 20, Great fire at Saint John, N.B. October, First exportation of wheat from Manitoba to the United Kingdom. Founding of the University of Manitoba.
1878. July 1, Canada joined the International Postal Union.
1879. May 15, Adoption of a protective tariff ("The National Policy").
1880. Royal Canadian Academy of Arts founded; first meeting and exhibition, Mar. 6. May 11, Sir A. T. Galt appointed first Canadian High Commissioner in London. Sept. 1, All British possessions in North America and adjacent islands except Newfoundland and its dependencies annexed to Canada by Imperial Order in Council of July 31. Oct. 21, Signing of the contract with the present Canadian Pacific Railway Co. for the completion of the Canadian Pacific railway.
1881. April 4, Second Dominion Census. May 2, First sod of the Canadian Pacific railway as a company line turned.
1882. May 8, Provisional districts of Assiniboia, Saskatchewan, Athabasca, and Alberta formed. May 25, First meeting of the Royal Society of Canada. Aug. 23, Regina established as seat of government of Northwest Territories.
1883. Sept. 5, Formation of the Methodist Church in Canada; united conference.
1884. May 24, Sir Charles Tupper, High Commissioner in London. Aug. 11, Order in Council settling the boundary of Ontario and Manitoba.
1885. Mar. 26, Outbreak of Riel's second rebellion in the Northwest. April 24, Engagement at Fish Creek. May 2, Engagement at Cut Knife. May 12, Taking of Batoche. May 16, Surrender of Riel. Aug. 24, First census of the Northwest Territories. Nov. 7, Last spike of Canadian Pacific Railway main line driven at Craigellachie. Nov. 16, Execution of Riel.
1886. April 6, Incorporation of Vancouver. June 7, Archbishop Taschereau of Quebec made first Canadian Cardinal. June 13, Vancouver destroyed by fire. June 28, First through train of the Canadian Pacific Railway left Montreal for Port Moody. July 31, First quinquennial census of Manitoba.
1887. Interprovincial Conference at Quebec. April 4, First Colonial Conference in London.
1888. Feb. 15, Signing of Fishery Treaty between United Kingdom and United States at Washington. August, Rejection of Fishery Treaty by United States' Senate.

1890. Mar. 31, The Manitoba School Act abolished separate schools.
1891. April 5, Third Dominion Census. June 6, Death of Sir John A. Macdonald.
1892. Feb. 29, Washington Treaty, providing for arbitration of the Bering Sea Seal Fisheries question. July 22, Boundary Convention between Canada and United States.
1893. April 4, First sitting of the Bering Sea Arbitration Court. Dec. 18, Archbishop Machray, of Rupert's Land, elected first Anglican Primate of all Canada.
1894. June 28, Second Colonial Conference at Ottawa. Dec. 12, Death of Sir John Thompson at Windsor Castle.
1895. Sept. 10, Opening of new Sault Ste. Marie canal.
1896. April 24, Sir Donald Smith (Lord Strathcona) High Commissioner in London. August, Gold discovered in the Klondyke.
1897. June 22, Celebration throughout the Empire of the Diamond Jubilee of H.M. Queen Victoria. July, Third Colonial Conference in London. Dec. 17, Award of the Bering Sea Arbitration Court.
1898. June 13, The Yukon district established as a separate Territory. Aug. 1, The British Preferential Tariff went into force. Aug. 23, Meeting at Quebec of the Joint High Commission between Canada and the United States. Dec. 25, British Imperial penny (2 cent) postage introduced.
1899. Oct. 1, Mgr. Diomede Falconio arrived at Quebec as first permanent Apostolic Delegate to Canada. Oct. 11, Beginning of the South African War. Oct. 29, First Canadian contingent left Quebec for South Africa.
1900. Feb. 27, Battle of Paardeberg. April 20, Great fire at Ottawa and Hull.
1901. Jan. 22, Death of Queen Victoria and accession of King Edward VII. April 1, Fourth Dominion Census. Sept. 16-Oct. 21, Visit to Canada of the Duke and Duchess of Cornwall and York (King George V and Queen Mary).
1902. May 31, End of South African War; peace signed at Vereeniging. June 30, Meeting of fourth Colonial Conference in London. Aug. 9, Coronation of H. M. King Edward VII. Dec., First message sent by wireless from Canada to the United Kingdom via Cape Breton, N.S.
1903. Jan. 24, Signing of the Alaskan Boundary Convention. June 19, Incorporation of Regina. Oct. 20, Award of the Alaskan Boundary Commission.
1904. Feb. 1, Dominion Railway Commission established. April 19, Great fire in Toronto. Oct. 8, Incorporation of Edmonton.
1905. Sept. 1, Creation of the provinces of Alberta and Saskatchewan.
1906. University of Alberta founded. Oct. 8, Interprovincial Conference at Ottawa.
1907. April 15-May 14, Fifth Colonial Conference in London. New customs tariff, including introduction of intermediate tariff. Oct. 17, Transatlantic wireless open for limited public service. University of Saskatchewan founded. Dec. 6, First recorded flight in Canada of a heavier-than-air machine carrying a passenger (Dr. Graham Bell's tetrahedral kite, *Cygnet*).
1908. Jan. 2, Establishment of Ottawa Branch of Royal Mint. June 21-23, Bicentenary of Bishop Laval celebrated at Quebec. July 20-31, Quebec tercentenary celebrations. Visit of Prince of Wales to Quebec. Aug. 2, Great fire in Kootenay valley, B.C. University of British Columbia founded.
1909. Jan. 11, Signing of International Boundary Waters Convention between Canada and United States. Feb. 23, First flight in Canada of a heavier-than-air machine under its own power (McCurdy's *Silver Dart*).
1910. May 6, Death of King Edward VII and accession of King George V. Sept. 7, North Atlantic Coast Fisheries Arbitration Award of The Hague Tribunal. New trade agreements made with Germany, Belgium, Holland, and Italy. Oct. 11, Inauguration at Kitchener of Ontario hydro-electric power transmission system.
1911. May 23-June 20, Imperial Conference in London. June 1, Fifth Dominion Census. June 22, Coronation of H.M. King George V. July 11, Disastrous fires in Porcupine district.
1912. Mar. 29-April 9, First Canada-West Indies Trade Conference held at Ottawa. April 15, Loss of the steamship *Titanic*. Appointment of Dominion Royal Commission. May 15, Extension of the boundaries of Quebec, Ontario, and Manitoba.
1914. May 20, Loss of the steamship *Empress of Ireland*. Aug. 4, War with Germany; Aug. 12, with Austria-Hungary; Nov. 5, with Turkey. Aug. 18-22, Special war session of Canadian Parliament. Oct. 16, First Canadian contingent of over 33,000 troops landed at Plymouth, England.
1915. February, First Canadian contingent landed in France and proceeded to Flanders. April 22, Second Battle of Ypres. April 24, Battle of St. Julien. May 20-26, Battle of Festubert. June 15, Battle of Givenchy.
1916. Jan. 12, Order in Council authorizing increase in number of Canadian troops to 500,000. Feb. 3, Destruction of the Houses of Parliament at Ottawa by fire. April 8-20, Battle of St. Eloi. June 1, Census of Prairie Provinces. June 1-3, Battle of Sanctuary Wood. July 1, Commencement of the Battle of the Somme.

- Sept. 1, Corner-stone of new Houses of Parliament laid by Duke of Connaught.
1917. Feb. 12-May 15, Imperial Conference. Mar. 20-May 2, Meetings in London of Imperial War Cabinet. Mar. 21-April 27, Imperial War Conference. April 6, United States declared war against Germany. April 9, Capture of Vimy Ridge. June 21, Appointment of Food Controller. Aug. 15, Battle of Loos, capture of Hill 70. Aug. 29, Passing of Military Service Act. Sept. 20, Completion of Quebec Bridge. Parliamentary franchises extended to women. Oct. 26-Nov. 10, Battle of Passchendaele. Dec. 6, Serious explosion at Halifax, N.S.
1918. Mar. 31, Germans launched critical offensive on West Front. March-April, Second Battle of the Somme. April 17, Secret session of Parliament. June-July, Prime Minister and colleagues attended Imperial War Conference in London. July 18, Allies assumed successful offensive on West Front. Aug. 12, Battle of Amiens. Aug. 20-28, Capture of Monchy le Preux. Sept. 2-4, Breaking of Drocourt-Queant line. Sept. 16, Austrian peace note. Sept. 27-29, Capture of Bourlon Wood. Sept. 30, Bulgaria surrendered and signed armistice. Oct. 1-9, Capture of Cambrai. Oct. 6, First German peace note. Oct. 20, Capture of Denain. Oct. 25-Nov. 2, Capture of Valenciennes. Oct. 31, Turkey surrendered and signed armistice. Nov. 4, Austria-Hungary surrendered and signed armistice. Nov. 11, Capture of Mons. Germany surrendered and signed armistice.
1919. Feb. 17, Death of Sir Wilfrid Laurier. May 1-June 15, General strike at Winnipeg and other western cities. June 28, Signing at Versailles of Peace Treaty and Protocol. Aug. 15, Arrival of the Prince of Wales for official tour in Canada. Aug. 22, Formal opening of Quebec Bridge by the Prince of Wales. Sept. 1, The Prince of Wales laid foundation stone of Peace Tower, Parliament Buildings, Ottawa. Sept. 1-Nov. 10, Special peace session, thirteenth Parliament of Canada. Dec. 20, Organization of "Canadian National Railways" by Order in Council.
1920. Jan. 10, Ratifications of the Treaty of Versailles. Feb. 19, Shareholders ratified agreement for sale of the Grand Trunk Railway to the Dominion Government. May 31-June 18, Trade Conference at Ottawa between Dominion and West Indian Governments. July 10, Sir Robert Borden succeeded by Rt. Hon. Arthur Meighen as Prime Minister. July 16, Ratifications of the Treaty of St. Germain-en-Laye.
- Aug. 9, Ratifications of the Treaty of Neuilly-sur-Seine. Nov. 15, First meeting of League of Nations Assembly began at Geneva, Switzerland.
1921. May 10, Preferential tariff arrangement with British West Indies became effective. June 1, Sixth Dominion Census. June 20-Aug. 5, Imperial Conference. Nov. 11, Opening of Conference on limitation of armament at Washington.
1922. Feb. 1, Arms Conference at Washington approved 5-power treaty, limiting capital fighting ships and disapproving unrestricted submarine warfare and use of poison gas. April 10, General Economic Conference opened at Geneva. July 13, Conference between Canada and the United States re perpetuating the Rush-Bagot Treaty regarding armament on the Great Lakes. Aug. 7, Allies' Conference on war debts and reparations opened at London. Oct. 10, Mudania Armistice signed by Britain, France, and Turkey. Dec. 9, Reparations Conference opened at London.
1923. April 1, Removal of British embargo on Canadian cattle effective. Oct. 1, Imperial Conference and Economic Conference at London.
1924. April 23, British Empire Exhibition opened by King George at Wembley, England, with the Prince of Wales as President. Aug. 6-16, Meeting of the British Association for the Advancement of Science at Toronto. Aug. 11-16, Meeting of International Mathematical Congress at Toronto.
1925. June 10, Inauguration of the United Church of Canada. Nov. 20, Death of Queen Alexandra.
1926. June 1, Census of Prairie Provinces. July 1, Two-cent domestic rate of postage restored. Oct. 19-Nov. 23, Imperial Conference in London. Nov. 26, Hon. C. Vincent Massey appointed Envoy Extraordinary and Minister Plenipotentiary to the United States.
1927. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reached Ottawa. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. July 30, The Prince of Wales, Prince George, the Rt. Hon. Stanley Baldwin and party, arrived at Quebec on a visit to Canada. September, Canada elected as a non-permanent member of the Council of the League of Nations at Geneva. November, Dominion-Provincial Conference on the relations between the Dominion and the provinces.
1928. April 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceased to

- exist, leaving Quebec the only province with a bi-cameral legislature.
1929. Oct. 15-25, The Rt. Hon. J. Ramsay MacDonald, Prime Minister of Great Britain, visited Canada. Dec. 14, Transfer of natural resources to Manitoba and Alberta.
1930. Jan. 21, Five-power naval arms conference opened at London; Canada represented by Hon. J. L. Ralston. Feb. 20, Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskatchewan. Aug. 1, H.M. Airship R-100 arrived at Montreal, being the first transatlantic lighter-than-air craft to reach Canada. Oct. 1, Imperial Conference in London.
1931. June 1, Seventh Dominion Census. June 30, The Statute of Westminster exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act approved by the House of Commons. Sept. 21, Great Britain suspended specie payments, following which Canada restricted the export of gold. Nov. 21, Abnormal Importations Act, extending preference to Empire products, assented to in the United Kingdom. Dec. 12, Statute of Westminster establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom became effective.
1932. July 21-Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal.
1933. Jan. 17-19, Dominion-Provincial Conference. May 18, Celebration of the 150th anniversary of the landing of the Loyalists at Saint John.
1934. August, Celebration at Gaspé of the 400th anniversary of the first landing of Jacques Cartier.
1935. Mar. 11, Bank of Canada commenced business. May 6, Celebrations throughout the Empire of the 25th anniversary of the accession of King George V to the Throne. Sept. 15, Conference of British Commonwealth Statisticians met in Ottawa. Dec. 9, Dominion-Provincial Conference met in Ottawa; Naval Limitation Conference met in London.
1936. Jan. 20, Death of H.M. King George V and accession of H. M. King Edward VIII. Mar. 8, German forces reoccupied the Rhineland in defiance of the Treaty of Versailles. June 1, Quinquennial Census of the Prairie Provinces taken. July 1-Sept. 7, Celebration in Vancouver of the Golden Jubilee of that city and of the C.P.R. July 20, Unveiling of Vimy Memorial in France by H.M. King Edward VIII. Dec. 11, Abdication of H. M. King Edward VIII and accession of H. M. King George VI.
1937. Jan. 1, Belgium represented in Canada by a Minister Plenipotentiary. Jan. 28, Decision of the Judicial Committee of the Privy Council declaring certain legislation, passed by the former Administration, on unemployment insurance, hours of labour, minimum wages, and marketing, *ultra vires* of the Dominion Parliament. Mar. 30, The Governor General and Lady Tweedsmuir visited the White House at Washington to return the official visit made by President Roosevelt at Quebec on July 30, 1936. May 12, Coronation of H. M. King George VI. July 8, Imperial Airways flying boat *Caledonia* arrived at Montreal from Southampton, inaugurating the experimental phase of the Transatlantic Airways. Aug. 14, Announcement of the appointment of a Royal Commission on Dominion-Provincial Relations, with Chief Justice Rowell as chairman. Aug. 17, Dominion Government disallows three Alberta statutes on the ground of invasion of the legislative field assigned to the Dominion Parliament. Oct. 28, The question of whether the power of disallowance vested in the Governor General by the B.N.A. Act is still subsisting, referred to the Supreme Court. Nov. 2, The question of the competency of the Provincial Government of Alberta to enact certain legislation referred to the Supreme Court in the form of three bills. Nov. 9, Reference to the Supreme Court of a question as to whether the power of a Lieutenant-Governor to reserve approval of provincial legislation still subsists. Nov. 29, Rowell Commission on Constitutional Relations opens sittings at Winnipeg.
1938. Mar. 4, Unanimous judgments of the Supreme Court of Canada on the Alberta constitutional references made in favour of the Dominion Government regarding each of the questions submitted: powers of the Governor General in Council to disallow provincial legislation, and powers of the Lieutenant-Governor to reserve provincial legislation for the signification of the pleasure of the Governor General, were found to be valid and unrestricted; the press, credit regulation, and banking taxation measures were found unconstitutional. The Court also held the Social Credit Act unconstitutional, although this was not a subject of specific reference. Mar. 11, Alberta Government appealed to the Privy Council against the judgments of the Supreme Court.

PART III.—HISTORIC SITES AND MONUMENTS IN CANADA.*

The work of restoring and preserving sites of national historic interest in Canada was inaugurated about eighteen years ago, after representations had been made to the Government concerning the need for acquiring, as a great national heritage, sites and relics associated with the early history of the Dominion. The National Parks Bureau of the Lands, Parks, and Forests Branch, Department of Mines and Resources, is now entrusted with the task of marking and preserving such sites and monuments as have been acquired. In the important work of weighing and considering the historic background and associations of sites and memorials, the Bureau is assisted by the Historic Sites and Monuments Board of Canada, an honorary body whose members, resident in various parts of the country, are historians of recognized standing.

Since the inception of its work, the Board has weighed and considered the circumstances surrounding more than a thousand sites of which over three hundred, most of which are listed below, have been judged to be of sufficient national importance to warrant their being suitably marked and maintained. These include: Indian earthworks, forts, and villages; French forts, trading posts, and mission enterprises; sites connected with British exploration and naval and military operations in the long struggle for the possession of Canada; posts of the Hudson's Bay Company; and sites related to the economic and industrial development of the Dominion.

For the marking of these sites a finely designed tablet of bronze is used; the tablet in most cases is affixed to a field-stone cairn or a cut-stone monument, although in some instances it is placed on an existing structure associated with the site.

Among the outstanding historic sites preserved and maintained by the National Parks Bureau, the Fortress of Louisbourg in Cape Breton takes high place, for here were enacted the early stages of the long struggle which culminated in the possession of Canada by the British Crown. Louisbourg was one of the most keenly disputed fortresses in North America. It was erected more than two centuries ago by the French, who had named the settlement in honour of Louis the Fourteenth, King of France. It was captured by the British forces in 1745, but was subsequently handed back to the French. It was again besieged by the English and finally captured by them in 1758. It is interesting to recall that one of the brigades of infantry engaged in the recapture of Louisbourg was commanded by General Wolfe, who was later to die heroically at Quebec. Most of the original area of the fortress has now been acquired by the Dominion Government. Careful excavation work has been carried out and a museum established at the site. From a visit to this museum and a tour of the grounds the visitor can reconstruct in imagination a little of the historic past of Louisbourg.

Another notable historic site in Nova Scotia is Fort Anne in Annapolis Royal. Before the Pilgrim Fathers landed at Plymouth Rock, a thriving village stood on the shores of the Annapolis Basin, and here one of the first vessels built on this continent unfolded its sails. Annapolis Royal, too, saw the departure of 1,600 Acadians in the expulsion of 1755, the event so strikingly portrayed in Longfellow's *Evangeline*. The museum building recently restored was originally the Officers' Quarters and was built in 1797-98 under the supervision of Edward, Duke of Kent, the father of

*Prepared under the direction of the National Parks Bureau, Department of Mines and Resources.

TYPICAL MEMORIALS AND TABLETS USED IN MARKING HISTORIC SITES

(For description see page 4.)

CHARACTERISTIC HISTORIC SITES AND MONUMENTS.

Left of the double-page layout reading downwards.—(1) The Jacques Cartier Memorial Cross at Gaspé, Que. Here Cartier landed on July 24, 1534, and laid claim to the land for the King of France; the cross was erected on the occasion of the 400th. anniversary of the landing. (2) Interior view of Fort Chambly, on the Richelieu river about 20 miles south-east of Montreal. The first wooden fort on this site was built by the French in 1665 as a protection against the Iroquois. The inset view shows the caretaker's quarters and part of the museum. (3) Fort Wellington, at Prescott, Ont. completed in 1838, was built as a main base for the defence of communications between Kingston and Montreal after the experiences of the War of 1812-14. The picture shows the old blockhouse and officers' quarters.

Upper centre—Fort Anne, at Annapolis Royal, N.S., associated with early French settlement on the shores of Annapolis Basin. The picture shows officers' quarters (now the museum) viewed through the old gate. These quarters, recently restored, were originally built in 1797-98 under the supervision of Edward, Duke of Kent, the father of Queen Victoria. Inset is a view of Fort Louisbourg, on Cape Breton island. The original French settlement at Fort Louisbourg was established in 1713 and it became one of the most keenly disputed fortresses in North America.

Lower centre—An interior view of the museum at Fort Beauséjour, near Sackville, N.B., showing the old Beaubassin church bell.

Right, reading downwards—(1) Reproduction of an old print of Fort Walsh, Sask.—a North West Mounted Police post, built in 1875, to establish Canadian authority among the Indians of the Cypress hills. (2) Fort Prince of Wales, the old Hudson's Bay Company fort near Churchill, Man., with an inset showing the gateway of old Fort Garry, another early Hudson's Bay Company post established on the Red river, where the city of Winnipeg now stands. (3) The obelisk near Bella Coola, B.C., marking the spot where Sir Alexander Mackenzie reached the shores of the Pacific ocean to complete the first overland crossing of continental North America. The inset shows the remaining building of Fort Langley, established by the Hudson's Bay Company in 1827 to control the trade of the lower Fraser river and Puget sound. It was the first post of the Company on what is now the British Columbia coast.

TYPICAL MEMORIALS AND TABLETS.

The single-page layout at the left shows several forms of memorials that have been erected to mark historic sites in Canada. At the top is shown a boulder cairn with tablet affixed. This particular cairn marks the site of Jasper House at Jasper National Park, Alta. At left centre is a view of a typical bronze tablet and at right centre is the obelisk memorial at Chrysler's Farm battlefield site, near Morrisburg, Ont. The lowest picture shows a cut-stone monument, this being the Bishop Macdonell Memorial at St. Raphael, Ont. The sketches show (top) the monument to Sieur de Monts at Annapolis Royal, N.S. and (bottom) the memorial erected to the memory of Madeleine de Verchères at Verchères, Que.

Queen Victoria, when he was Commander-in-Chief of the British Forces in North America with headquarters at Halifax, Nova Scotia.

In New Brunswick, the site of Fort Beauséjour has been acquired. Built by the French, the fort was intended to be an Acadian stronghold against the undefined claims of the English to Acadia. Around the fort, Acadians had their homes and farms. It was captured by the British in 1755 and renamed Fort Cumberland. Restoration work in connection with the ruins of the fort has been carried out and a new museum built at the site.

Another historic fortress which has been placed under the care of the National Parks Bureau is Fort Chambly in the province of Quebec. Fort Chambly lies about twenty miles southeast of Montreal on a conspicuous headland on the Richelieu river. The first fort, built as a protection from the terror of the Iroquois by the French in 1665, was of wooden construction. After many vicissitudes, it was rebuilt of stone, this work being completed in 1711. In 1760 the fort was surrendered to the British who, with a small armed force, held it until 1775. In that year the Americans captured the fort; they evacuated it the following year, but burned everything that was combustible leaving only the four walls standing. The fort was later repaired and garrisoned by Governor Carleton and played an important part in the War of 1812. Under the administration of the National Parks Bureau, steps have been taken to arrest the disintegration of the massive structure and a new museum building has been erected within the walls of the fort.

On an island in the Richelieu river about ten miles from the United States border is the site of another fortress erected by the French, Fort Lennox, on Ile-aux-Noix. The present fort, which was rebuilt by the Imperial authorities in the period from 1812 to 1827, is administered by the National Parks Bureau, and stands majestically in memory of the defence of the Richelieu Gateway.

Fort Wellington, at Prescott, Ontario, which is also under the care of the National Parks Bureau, remains as it was when finally completed in 1838, an impressive landmark. Named after the great Duke of Wellington, it was erected when the British authorities decided to fortify Prescott as one of the most vulnerable points of attack in the War of 1812 and as the main base for the defence of communications between Kingston and Montreal. The fort is now an object of great interest to tourists and is visited annually by thousands of people.

In Manitoba, Fort Prince of Wales, opposite the port of Churchill, has been acquired. This, the most northerly fortress on the American continent, was built in the years between 1733 and 1771 in order to secure control of Hudson bay for the Hudson's Bay Company. It was surrendered to, and partially destroyed by, a French naval force in 1782. Its ruins, which are among the most interesting military remains on the continent, are gradually being restored.

The following are other sites which have been marked and are being maintained by the National Parks Bureau. Locations are approximate and all are marked by bronze tablets, though this fact is not specifically mentioned in the description when a cairn or monument has been erected on the site.

PRINCE EDWARD ISLAND.

Brudenell Point.—Cut-stone monument to mark the site where Jean Pierre Roma founded a base for control of the Gulf fisheries and for trade with France, Quebec, and the West Indies, 1732.

Charlottetown.—*Provincial Legislature Grounds*—Cut-stone monument to commemorate the four-hundredth anniversary of the landing of Jacques Cartier on the island, 1534; also a cut-stone monument to commemorate the distinguished

PRINCE EDWARD ISLAND—concluded.

service to navigation of Admiral Henry Wolsey Bayfield, 1795-1885. *Provincial Building*—Tablets to commemorate: (a) the laying of the first submarine telegraph in America, 1852; and (b) outstanding historical events connected with the Island.

Rocky Point.—*Near South Shore Road*—Cairn to commemorate the events connected with the survey of Prince Edward Island by Captain Samuel Holland in 1764-65.

NOVA SCOTIA.

Annapolis Royal.—*Fort Anne Park*—Cut-stone monument to commemorate the services of Samuel Vetch, Adjutant-General of the force which captured Port Royal, 1710, and who later was a notable figure in colonial history; also a cut-stone monument to commemorate the faithful services of Jean Paul Mascarene, 1684-1760, a French Huguenot in the army of Britain.

Bridgetown.—Cairn to commemorate the two combats at Bloody Creek in 1711 and 1757 between the British garrison at Annapolis Royal and allied French and Indians.

Canso.—*Public School Grounds, School St.*—Cairn to commemorate its fortification by the British in 1720 and later combats between them and the French and Indians.

Englishtown.—*Ste. Anne, Baddeck, Cape North Highway*—Cairn to commemorate settlement established by Captain Charles Daniel, 1629, and selection as a naval base, 1713, when it was named Port Dauphin.

Fort La Have.—*Lighthouse Reserve, Mouth of La Have River*—Cairn to mark the site of the fort built by Isaac de Razilly, where the capital of the colony was established.

Fort Lawrence.—*Main Highway from Sackville to Amherst*—Cairn to mark the site of the fort built by the British, 1750, for the defence of the isthmus of Chignecto.

Halifax.—*Admiralty House Grounds*—Cut-stone monument in honour of the officers and men of H.M.S. *Shannon*, which defeated the United States frigate *Chesapeake* off Boston harbour, June 1, 1813. *Bedford and French Landing Roads*—Cairn to mark the site of the encampment of the storm-shattered expedition sent from France in 1746, under Admiral the Duc d'Anville. *Naval Barracks*—Monument on small green to mark the site of the first Royal Dockyard in what is now the Dominion of Canada. *Post Office Building, Hollis St.*—Tablet to commemorate the establishment of the first Post Office in Canada, 1755. *Province House*—Tablet to mark the site of the first printing press in British North America.

Kennington Cove.—*Near Louisbourg Highway*—Cairn to mark the landing place of Brig.-Gen. James Wolfe's Brigade, June 8, 1758.

Liverpool.—*Fort Point Park*—Cairn to the memory of the Privateersmen of Liverpool bay, who maintained and defended their trade with the West Indies and waged successful war upon the enemies of Great Britain, in ships fitted and armed at their own expense.

Lower Granville.—Cairn to mark the site of the first fort or "habitation" of Port Royal, built in 1605 by the French under de Monts and Champlain.

North Sydney.—*Western Union Telegraph Company's Cable Building*—Tablet to commemorate the successful laying of a submarine telegraph cable between Cape Breton and Newfoundland, 1856.

Port la Tour.—*Near Bacarra Point, Port la Tour Highway*—Cairn to mark the site of the last foothold of France in Acadia, built prior to 1627.

Port Morien.—*Long Beach Road*—Cairn to mark the site of the first regular coal-mining operations in America, established by the French, 1720.

St. Peters.—*Canal Reserve*—Cairn to mark the site of Nicolas Denys' fort and trading post, 1650, and to commemorate the construction of the St. Peter's canal.

Shelburne.—*Foot of King St.*—Boulder to commemorate the founding of the town by United Empire Loyalists, 1783.

Sydney.—*Post Office Building*—Tablet to commemorate the public services of Joseph Frederick Wallet des Barres, 1722-1824, a distinguished military engineer.

NOVA SCOTIA—concluded.

Wallace Bridge.—*Main Highway from Wallace to Pugwash*—Cut-stone monument to mark the birthplace of Simon Newcomb, one of the world's greatest scientists.

Windsor.—*King's College Grounds*—Tablet on chapel to mark the site of the oldest university in the King's Overseas Dominions, founded in 1789. *King St.*—Cairn on military reserve to mark the site of Fort Edward, built by the British in 1750. *King's Square*—Cut-stone monument to commemorate the literary achievements of Thomas Chandler Haliburton, 1796-1865. *Park between King and Gerrish Sts.*—Cut-stone monument to commemorate the events connected with the first agricultural fair in Canada, which was held on Fort Edward Hill, May 21, 1765.

NEW BRUNSWICK.

Aulac.—Fort Beausejour Park—Monument to mark the site of Tonge's island, once the capital of Acadia. Monument in memory of settlers who came to Chignecto from Yorkshire, England, 1772-76.

Bathurst.—*Main and Murray Sts.*—Cairn to commemorate the services of Nicolas Denys, appointed Governor and Lieutenant-General of the coasts and islands of the gulf of St. Lawrence from Canso to Gaspe, 1654.

Campbellton.—*Riverside Park*—Cairn to commemorate the last naval battle of the Seven Years' War in North American waters, 1760.

Devon.—*Gibson and Albert Sts.*—Cairn to mark the site of Fort Nashwaak, erected by Governor Villebon, 1692.

Fredericton.—*Parliament Buildings*—Tablet to the memory of Sir Howard Douglas, Lieutenant-Governor of New Brunswick, 1823-31. *Brunswick and King Sts.*—Cut-stone monument in public park to commemorate the distinguished services of the 104th New Brunswick Regiment in the defence of Canada in 1813-14.

Hillsborough.—*Near C. N. R. Station*—Cut-stone monument to commemorate the engagement which took place near there, Sept. 3, 1755.

Lower Jemseg.—*Main Highway*—Cut-stone monument to mark the site of Fort Jemseg built in 1659 by Thomas Temple during the English possession of Acadia.

Minto.—*Near C.P.R. Station*—Monument to commemorate the first export of coal, before middle of 17th century.

North West Bridge.—*Newcastle-Fredericton Highway*—Cairn to commemorate events connected with Beaubears island which served as a concentration camp for refugee Acadians, 1756-59.

Petitcodiac.—*Moncton-Saint John Highway*—Cut-stone monument to mark the ancient Indian portage route from Acadia to the Upper St. John and Quebec, which was later used by the French.

Port Elgin.—Cairn to mark the site of Fort Gaspereau built by French troops, 1751, renamed Fort Monckton, 1755.

Saint John.—*West Saint John*—A boulder on Town Hall Square to mark the site of Fort Charnisay, built by Sieur d'Aulnay de Charnisay, 1645. Also tablet on Martello Tower, built for the defence of Saint John during the War of 1812-14, which is being preserved as an example of that type of fortification. *Port Howe Grounds*—Cairn to commemorate the public services of Major Gilfrid Studholme who built Fort Howe in 1778 and was its commander. Also tablet on Rockland Road to mark the site of Fort la Tour, erected by Charles de la Tour, 1631. *Royal Hotel*—Tablet to mark the site of Mallard House, in which the first Legislature of New Brunswick met in February, 1786. *Customs House Building*—Tablet to commemorate the first compound marine engine designed by Benjamin Tibbits, built in 1842. Also tablet to commemorate the invention of the first steam fog horn by Robert Foulis, 1854. *King Square*—Granite cross to commemorate the founding of the province, Aug. 16, 1784. *Market Square*—Boulder to mark the site of the landing of United Empire Loyalists, 1783.

Westfield.—*Fredericton-Saint John Highway*—Cairn to mark the site of Fort Boishebert (Nerepis), an ancient Indian stronghold strengthened by the French in 1749 and used by them against the British.

Woodstock.—*Highway, Ten Miles South of City*—Cairn to mark the site of Fort Meductic, chief Maliseet stronghold in Acadia in the 17th and 18th centuries.

QUEBEC.

Allan's Corners.—Granite obelisk to commemorate the Battle of Châteauguay, Oct. 26, 1813.

Beauport.—*Royal Ave.*—Tablet affixed to house in which Lieut.-Col. Charles de Salaberry, the hero of Châteauguay, was born, Nov. 19, 1778.

Cabano.—*Caldwell Road*—Cairn to mark the Témiscouata portage, longest and most difficult on the overland route between Acadia and Quebec.

Cap Rouge.—Cairn to mark the site of Fort Charlesbourg Royal, built by Jacques Cartier, where he spent the winter of 1541-42.

Carillon.—*Canal Reserve*—Cairn to commemorate the construction of the Carillon canal.

Cascades Point.—*Main Highway*—Cairn to commemorate the events connected with the construction of the Soulanges canal in 1892-1900, to overcome the Cascades, Cedars, and Coteau rapids.

Caughnawaga.—Tablet on east wall of the old fort to commemorate the events connected with the construction of Fort St. Louis in 1725.

Cedars.—*Cedars-Cascades Point Road*—Cairn to mark the site of the Battle of the Cedars, May, 1776, between Canadian and American troops.

Chambly.—*Canal Reserve*—Cairn to commemorate the construction of the canal, connecting lake Champlain with the St. Lawrence river. *Chambly-St. Johns Highway*—Boulder to mark the site of Fort Ste. Thérèse, built in 1665 for defence against the Iroquois.

Coteau-du-Lac.—Cairn to mark the site of the fort and blockhouse built for the protection of the canal constructed in 1779-80.

Frelighsburg.—*Main Highway to Franklin, Vt.*—Monument to commemorate the battle of Eccles Hill, May 25, 1870, between Fenian Raiders and Canadian volunteers.

Gaspe.—*Main Highway*—Thirty-foot granite cross to commemorate the four-hundredth anniversary of the landing of Jacques Cartier, July 24, 1534.

Grenville.—*Canal Reserve*—Cairn to commemorate the construction of the Grenville canal.

Howick.—*Montreal-Malone Highway*—Cairn to commemorate the battle of Châteauguay Ford, between Canadian and American troops, Oct. 26, 1813.

Hull.—*Eddy Park*—Cairn to mark the site of the first portage of the Chaudière, traversed by Champlain and other early explorers.

Ile-aux-Coudres.—Granite cross to mark the site where Jacques Cartier landed, Sept. 6, 1535.

Ile-aux-Noix.—*Fort Lennox*—Tablets to commemorate the battle of Ile-aux-Noix, June 3, 1813, which resulted in the capture of two United States sloops and in memory of the officers, soldiers, and seamen of the Royal Navy and Provincial Marines who fought on lake Champlain during the years 1776-77 and 1812-14.

Kingsmere.—*King Mountain.*—Cairn to mark the site of the first Geodetic Survey station, established in 1905.

Lachine.—*Highway No. 2*—Cairn to commemorate the construction of the Lachine canal. *St. Joseph St.*—Cut-stone monument to commemorate the events connected with the massacre of the inhabitants by Indians on the night of Aug. 4-5, 1689. *Opposite City Hall*—Monument to commemorate the services of Robert Cavalier de La Salle, who founded Lachine in 1667.

Lacolle.—*Highways Nos. 14 and 52*—Cairn to commemorate the battle of Lacolle, Mar. 30, 1814.

Laprairie.—*Foch Square*—Cairn to mark the site of Fort Laprairie, 1687, a refuge for the settlers during a quarter-century of wars. *Intersection of the Chambly-St. Philippe and Laprairie-St. Johns roads*—Cairn to commemorate the second battle of Laprairie, Aug. 11, 1691.

Les Vieilles Forges.—*Three Rivers and Les Vieilles Forges Roads*—Cairn marking the site of the St. Maurice Forges, established by Poulin de Francheville, 1730.

QUEBEC—continued.

Lévis.—*230 St. Laurent St.*—Tablet to mark the place where Louis Fréchet, the Canadian poet, was born, Nov. 16, 1839.

Longueuil.—*Church of St. Antoine de Longueuil*—Tablet to mark the site of the stone fort built by the French, 1688-90.

Montreal.—*Molson's Brewery, Notre Dame St. E.*—Tablet to mark the site where the *Accommodation*, the first steamship in Canada, was built in 1809. *McGill Campus, Sherbrooke St.*—Boulder to mark the site of Hochelaga, the fortified Indian village visited by Cartier in 1535. *Customs Building, Youville Square*—Tablet to mark the site where Sieur de Maisonneuve laid the foundation of Montreal, May 18, 1642. *St. Paul and St. Sulpice Sts.*—Tablet to mark the birthplace of Pierre Le Moyne, Sieur d'Iberville, July 20, 1661.

Notre Dame de Pierreville.—*Main Road*—Cairn to mark the site of Fort Crevier, built in 1687, and to commemorate the battles which took place there, 1689 and 1693.

Odelltown.—Cairn to perpetuate the memory of the officers and men of the loyal Militia of Canada who took part in the battle of Odelltown, Nov. 7-9, 1838.

Percé.—*Logan Park*—Tablet to the memory of Sir William Logan, founder and first Director of the Geological Survey of Canada.

Quebec.—*Laval University Building*—Tablet to mark the site of the Quebec Seminary, the oldest educational house for boys in Canada, established in 1663. *Princess Louise Docks*—Tablet on waiting room to record the opening of the river St. Lawrence to the shipping of all nations, Jan. 1, 1850. *Hôtel Dieu, Charlevoix St.*—Tablet to mark the site of the first hospital established in America north of Mexico, which was founded Aug. 16, 1637. *Laval-Montmorency Park, Côte de la Montagne St.*—Tablet on stone wall at entrance to commemorate the events connected with the issue of the first patent in Canada, June 8, 1824.

Rivière des Prairies.—*Main Highway*—Cairn to mark the site of the battle of Coulée Grou, July 2, 1690, between the French and Iroquois.

St. Andrews East.—*Town Park*—Cairn to mark the site of the first paper mill in Canada, built by a group of New Englanders, 1803-5.

St. Hubert.—*Chambly Highway*—Cairn near entrance to airport to mark the site of Chambly Road, the first highway of importance in Canada, which was opened in 1665.

St. Johns.—*C. N. R. Station*—Tablet to mark one terminal of the first railway in Canada which ran from St. Johns to Laprairie and which was opened for traffic, July 21, 1836. *Champlain St.*—Boulder to mark the site of Fort St. Jean, built by the French, 1748, and rebuilt by the British, 1775. In the latter year it withstood a forty-five day siege by American troops. *St. John's Golf Club*—Cairn to commemorate the battle of Montgomery Creek, Sept. 6, 1775, when a group of Canadian militia and Indians defeated invading American troops.

St. Lin.—Cairn in front of Town Hall in memory of Sir Wilfrid Laurier, 1841-1919. Sir Wilfrid was born here on Nov. 20, 1841.

St. Louis de Blandford.—Monument to Charles Héon who settled there Mar. 14, 1825. His pioneer efforts paved the way for many who followed.

St. Patrick.—*Highway No. 2*—Tablet on iron standard to mark the place where Sir John A. Macdonald spent many of his summers between 1873 and 1890.

Senneville.—*Adjacent to Gouin Boulevard*—Cairn to commemorate the battle of the Lake of Two Mountains, 1689, when French troops defeated a band of Iroquois.

Sorel.—*Canada Steamship Lines Wharf*—Cairn to mark the site of Fort Richelieu, built by Pierre de Saurel, 1665, which proved an important defence post against the Iroquois.

Tadoussac.—*Front St.*—Cairn to mark the site of the oldest French establishment and Christian mission station in Canada.

Three Rivers.—*City Hall*—Tablet to commemorate the services of Benjamin Sulte, historian and poet, 1841-1923. *Customs Building*—Boulder to mark the site

QUEBEC—concluded.

of Fort Three Rivers, built by the French, 1634, which became a centre for fur trade with the Indians. *Lejeune St.*—Boulder to commemorate the battle of Three Rivers, June 8, 1776, when British troops repulsed an attack by an American column.

Verchères.—Large monument with bronze statue, near the St. Lawrence river, to Madeleine de Verchères, who for eight days defended, against the Iroquois, the fort which stood there in 1692.

Ville La Salle.—*La Salle Boulevard*—Cairn in front of Novitiate Building to mark the site of the fief granted to La Salle in 1669, from which he started on his distant expeditions.

ONTARIO.

Adolphustown.—*Hay Bay*—Cairn to the memory of Sir John A. Macdonald. There he drew inspiration to weld together the weak and scattered colonies of the day into a strong and ambitious Dominion.

Allanburg.—*Near the Bridge*—Cairn to mark the site where the first sod of the old Welland canal was cut, Nov. 30, 1824.

Amherstburg.—*Waterworks Park*—Monument to the memory of those who served on lakes Erie and Huron in the defence of Canada during the War of 1812-14, and to mark the site of the Navy Yard.

Bath.—*Adjacent to the Public Road*—Cairn to mark the site where the *Frontenac*, the first steamship that navigated lake Ontario, was built. It was launched Sept. 7, 1816.

Bay of Quinte.—*Intersection of the Trenton and Carrying Place Roads*—Cairn to commemorate the treaty concluded with the Mississauga Indians, 1787, by which a large tract of land on the north shore of lake Ontario was ceded to the Crown for settlement purposes.

Blenheim.—*Entrance to Town Park, Highway No. 3*—Cairn to commemorate the treaty concluded with the Indians in 1790, whereby a great tract of land was acquired to provide homes for expatriated United Empire Loyalists.

Bridgeburg.—*Niagara Boulevard*—Boulder to mark the site of the battle of Frenchman's Creek, Nov. 27, 1812, and to mark the landing place of the Fenian Raiders, May 31, 1866.

Chatham.—*River Road*—Cairn to commemorate the engagement at McRae's House, Dec. 15, 1813.

Chippawa.—*Niagara Boulevard*—Boulder in memory of the officers and men killed in the battle of July 5, 1814, and a boulder to mark the site of the shipyard on Navy island where the first vessels to navigate the Upper Lakes under the British flag were built, 1763-64.

Christian Island.—Boulder to mark the site of Fort Ste. Marie II, the Jesuit Mission to the Hurons, 1649-50. Here the Huron nation made its last stand against the Iroquois, 1649-51.

Cornwall.—*Highway No. 2*—Cairn to mark the site of Glengarry House, the home of Lieut.-Col. John Macdonell, a gallant and distinguished officer in the War of the American Revolution, 1775-84; he was later first Speaker of the Legislative Assembly of Upper Canada. *Collegiate Institute, Sydney St.*—Tablet to commemorate the distinguished public services of Hon. and Rt. Rev. John Strachan, 1778-1867, who opened his famous grammar school in Cornwall, 1803. *Post Office Building*—Tablet in commemoration of the unswerving fidelity and eminent services of the pioneer Loyalists who subdued the wilderness and laid the foundations of the present province of Ontario.

Deseronto.—*Tyendinaga Indian Reserve*—Cairn to commemorate the arrival, May 22, 1784, of a band of Mohawk Indians, expelled from their homes in the Mohawk valley for their fidelity to the unity of the Empire.

Dundas.—*Governor's Road*—Cairn to commemorate the events connected with Dundas Street, which was planned to promote the settlement of the province by Lieutenant-Governor Simcoe, 1793.

ONTARIO—continued.

Edenvalle.—*Highway No. 26*—Cairn to mark the site of Glengarry Landing, where Lieut.-Col. Robert McDouall built the flotilla of boats with which he effected the relief of the British garrison at Fort Michilimackinac, May, 1814.

Fort Erie.—*Ruined Walls of Old Fort*—Two tablets, one setting forth its history, the other commemorating the capture of the United States ships of war *Ohio* and *Somers*, on lake Erie, Aug. 12 and 13, 1814.

Fort William.—*Heath Park*—Cairn to commemorate the early historic events which took place in that city. *Kaministiquia River*—Cairn to mark the site of the canoe landing and the beginning of the long portage to the west. It was used by the Indians for ages and later by French, British, and Canadian discoverers, explorers, and traders.

Goderich.—*Entrance to Town, Highway No. 8*—Tablet to commemorate the life work of the men and women in the Huron Tract during the years 1828-1928.

Hamilton.—*Harvey Park*—Monument to mark the site of the fortification built on Burlington Heights for the defence of the Niagara peninsula during the War of 1812-14.

Iona.—Tablet on stone gateway to mark the site of Southwold Earthworks, the only double-walled Indian earthwork known in Canada.

Kingston.—*Whig Publishing Company Building, King St.*—Tablet to mark the site of St. George's Anglican Church, in which the first meeting of the Executive Council of the Province of Upper Canada was held, July 8, 1792. *Macdonald Park*—Murney Tower, erected by the Royal Engineers, 1840-46 for the defence of Kingston. *Gateway of Tête du Pont Barracks*—Tablet to mark the site of Fort Frontenac, built by Count Frontenac, July, 1673, and rebuilt by La Salle in 1675. Also a tablet to commemorate the treaty concluded with the Mississauga Indians, 1783, whereby a large tract of land was obtained for the settlement of the Loyalists. *Kingston Harbour*—Martello Shoal Tower, built about 1845 to complete the defences of the Port of Kingston as the chief naval station on lake Ontario. *Rideau St., No. 102*—Tablet to mark the stone house where Sir John A. Macdonald lived as a boy. *Kingston General Hospital Grounds*—Cut-stone monument to commemorate the public services of Lord Sydenham and Sir Charles Bagot, Governors-in-Chief of United Canada. *Royal Military College Grounds*—Tablet on Frigate Building to mark the site of the British naval station for lake Ontario, 1788-1818. *Highway No. 2, Barriefield*—Cairn at entrance to Fort Henry to commemorate the services of the officers and seamen of the Royal Navy who served on lake Ontario during the War of 1812-14.

Kitchener.—*Memorial Tower, Grand River, opposite Doon*—Tablet to commemorate the pioneers of the county of Waterloo.

Leamington.—*Point Pelee National Park*—Cairn to commemorate a number of early historic events which occurred at Point Pelee.

Lyndhurst.—*Adjacent to Public Road*—Cairn to mark the site of the Lansdowne Iron Works, built in 1801 and which operated there for ten years.

Maitland.—*Highway No. 2*—Cairn to mark the site of the shipyard at Pointe-au-Baril, in which were built the last French ships of war which navigated lake Ontario.

Mallorytown Landing.—*National Park Reserve*—Cairn to mark the site of Bridge Island, which was fortified and garrisoned in 1814 for the protection of the vital line of supply by water from Lower Canada.

Mattawa.—*Memorial Park*—Cairn to mark the site of the historic canoe route from Montreal to the Great Lakes and beyond, which was used by early explorers and traders.

Morrisburg.—*Highway No. 2*—Granite obelisk in memory of the officers and men killed at the battle of Chrysler's Farm,* 1812.

Nanticoke.—*School House*—Tablet to commemorate the engagement of Nov. 13, 1813, when the Norfolk militia routed a band of enemy marauders.

Niagara-on-the-Lake.—*Military Reserve*—Tablet on outer wall of Fort Mississauga, built in 1814 for the defence of that frontier, and occupied until 1845.

*The name is spelled "Chrysler" on the tablet erected, but "Crysler" is the proper form of the name as written by Captain Crysler, himself.

ONTARIO—continued.

Also cairn to mark the site of Fort George, built 1797-1801, captured by an invading army during the War of 1812-14, and later regained and maintained as a military post until 1845. *Queen St.*—Cairn to commemorate the battle of Fort George, May 27, 1813. *Niagara Historical Museum*—Tablet to commemorate the treaties concluded with the Indians, 1781 and 1784, by which a large tract of fertile land was purchased for settlement purposes. *Butler's Burying Ground*—Monument in memory of the officers and soldiers of Butler's Corps of Rangers, 1777-84, and to commemorate the action at Butler's Farm, July 8, 1813.

Normandale.—*Fish Hatchery*—Tablet to mark the site of the old furnace founded by Samuel Mason, 1818, which remained in operation until the local supply of bog ore was exhausted, about 1853.

Ohswegen.—*Council House Grounds*—Cut-stone monument to commemorate the loyal services of the Six Nations of Iroquois Indians to the British Empire.

Ottawa.—*Bridge near Chateau Laurier*—Tablet to commemorate the events connected with the construction of the Rideau canal. *Entrance to Dominion Archives*—Tablet in memory of those who perished on Canadian Arctic Expeditions, 1913-18. *Dominion Archives*—Tablet in commemoration of the valour and sacrifice of Allan Rudyard Crawford, commander and scientist of an Arctic expedition to Wrangel island, 1921-23. *Nepean Point*—Monument to commemorate the services of Samuel de Champlain, the first great Canadian.

Penetanguishene.—*Huron Park*—Cairn to commemorate the events connected with the capture of the United States warships, *Tigress* and *Scorpion*, Sept. 3-6, 1814.

Port Arthur.—*Gore Park*—Cairn to commemorate early historic events. Wolsey's Red River Expeditionary Force camped here May 19, 1870.

Port Dover.—*Near Quay St.*—Cross to mark the place where Dollier and Galinee landed in March, 1670, and erected a cross with the Arms of France, claiming possession of the lands of the Lake Erie district for the King of France. *Black Creek*—Cairn to mark the place where Dollier and Galinee, with seven other Frenchmen, the first Europeans known to have ascended the Great Lakes, wintered, 1669-70. *Powell Park*—Cairn to mark the point from which General Brock set out with his small army, Aug. 8, 1812, to relieve the invaded western frontier.

Port Stanley.—*Intersection of Bridge, Main, and Colburne Sts.*—Cairn to commemorate the historic events which took place in that vicinity.

Port Talbot.—*Talbot Road*—Cairn to mark the site of the residence of Hon. Col. Thomas Talbot, who there began, in 1803, the foundation of the Talbot Settlement.

Prescott.—*Highway No. 2*—Cairn to mark the site of Fort de Lévis, built by the French on Ile Royale in the St. Lawrence river, 1760. *Lighthouse Tower, Shore of St. Lawrence*—Tablet in memory of officers and men killed at the battle of the Windmill, Nov. 13, 1838.

Queenston.—*Niagara Boulevard*—Boulder to mark the site of Vrooman's Battery, engaged in the battle of Queenston Heights, Oct. 13, 1812.

Queenston Heights Park.—Boulder to mark the site of Fort Drummond, built in 1814 for the defence of the Niagara frontier, and named after Sir Gordon Drummond.

Richmond.—*Richmond Road*—Cairn in memory of the services and tragic death of Charles Lennox, fourth Duke of Richmond, who died there Aug. 28, 1819.

Richmond Hill.—*Highway No. 11*—Cairn to commemorate the events connected with the construction of Yonge Street, the military road and highway built in 1794-96, between lakes Ontario and Huron, to promote the settlement of the province.

Ridgeway.—*Main Highway*—Cairn in memory of the officers and men who fought against Fenian Raiders, June 2, 1866.

St. Joseph's Island.—Tablet on old chimney to mark the site of Fort St. Joseph, the most westerly military post in Upper Canada, built 1796-99. It was garrisoned until 1812 and became a noted trading station and resort for Indians.

ONTARIO—concluded.

St. Raphael.—Cut-stone monument to commemorate the public services of Hon. and Rt. Rev. Alexander Macdonell, 1760-1840.

Sandwich.—*Intersection of Sandwich and Main Sts.*—Cairn to mark the site from which Gen. Brock's troops embarked to attack Fort Detroit, Aug. 16, 1812.

Sault Ste. Marie.—*Huron Street*—Cairn to mark the site of the first Sault Ste. Marie canal, which was in use for canoes and bateaux before 1802.

South Lancaster.—*Monument Island, St. Lawrence River*—Cairn erected by the members of the Glengarry Militia who took part in the suppression of the Rebellion of 1837.

Stamford.—*Village Green*—Boulder to mark Niagara portage road, opened by United Empire Loyalists, 1788, which was the principal route of travel to Upper Lakes region until the opening of the Welland canal, 1829.

Thorold.—*Niagara Falls - Hamilton Highway*—Cairn to commemorate the battle of Beaver Dams, June 24, 1813.

Toronto.—*Near Province of Ontario Building, Exhibition Grounds*—Tablet in memory of the officers and men killed in action in the defence of the capital of Upper Canada, April 27, 1813. *Postal Station "K", North Yonge St.*—Tablet to mark the site of Montgomery's Tavern, the original headquarters of William Lyon Mackenzie, leader in the Upper Canada Rebellion. *Old City Hall Building, Front St.*—Tablet commemorating the first electric telegraph line in Canada, which ran between Toronto and Hamilton, inaugurated Dec. 19, 1846. *Parliament Buildings*—Tablet to commemorate the eminent public service of Sir Gordon Drummond, who administered the Government of the province, 1813-15.

Turkey Point.—*Normandale-St. Williams Highway*—Cairn to mark the site of Fort Norfolk, British military and naval station, 1814-15.

Victoria Harbour.—*Mission of St. Ignace*—Cairn to mark the site of the palisaded Huron village and Jesuit mission which were destroyed by the Iroquois, March, 1649.

Wardsville.—*Highway No. 2*—Cairn to mark the site of the battle of the Longwoods which took place at Battle Hill, Mar. 4, 1814.

Wasaga Beach.—*Wasaga Ave.*—Cairn to mark the site of Fort Nottawasaga, a blockhouse built in 1814 and destroyed the same year by enemy forces after a spirited defence.

Welland.—*Main Highway*—Cairn in memory of the officers and soldiers killed at the battle of Cook's Mills, Oct. 19, 1814.

Windsor.—*Dominion Bank Building, facing Ouellette Ave.*—Tablet to mark an important terminal of the "Underground Railway" which functioned prior to the Civil War in the United States, and which was the means of many coloured people finding a haven and freedom in Canada.

MANITOBA.

Churchill.—*Battery Point*—Cairn to mark the site of Port Churchill, discovered in 1619 by the ill-fated Danish expedition under Jens Munck. The first fort was built there by the Hudson's Bay Company in 1689. This was rebuilt in 1717, and for nearly two hundred years was the Company's most northerly post on the bay.

Fort Alexander.—*Hudson's Bay Company Post*—Cairn to mark the site of Fort Maurepas, one of La Vérandrye's trading posts built in 1738, and Fort Alexander, built by the Hudson's Bay Company in 1792.

Headingley.—*Portage la Prairie-Winnipeg Highway*—Cairn to mark the site of the first monument on the Dominion Lands Survey system. It was placed on the First Meridian, July 10, 1871.

Letellier.—*Jefferson Highway*—Cairn to mark the site of the War Road of the Sioux leading to the Lake of the Woods. It was the earliest route to the West. First used in 1733 by the French.

Lower Fort Garry.—*West Wall of Fort*—Tablet to commemorate the signing of Indian Treaty No. 1, Aug. 3, 1871, whereby the Chippewa and Swampy Cree Indians surrendered their rights to lands comprised within the boundaries of Manitoba as then existing.

MANITOBA—concluded.

Norway House.—*Hudson's Bay Company Post*—Cairn to mark the site of the post constructed in 1825. Here the Cree Syllabic system was invented and Treaty No. 5 made with the Indians in 1875.

Portage la Prairie.—*Near Pumping Station*—Cairn to mark the site of Fort La Reine, built by La Vérendrye, the French-Canadian explorer and discoverer, October, 1738.

The Pas.—*Devon Park*—Cairn in memory of Henry Kelsey, Hudson's Bay Company fur trader and explorer.

Wawanesa.—*Sunshine Highway*—Cairn to mark the site of seven forts, built by the North West, Hudson's Bay, and XY Companies between 1785 and 1828. From there ran the trade route to the Mandan country on the Missouri.

Winnipeg.—*Sir William Whyte Park*—Cairn to mark the site of Fort Douglas, headquarters of the first British Settlement west of the Great Lakes. *Main St.*—Cut-stone monument to commemorate the battle of Seven Oaks, between the rival fur-trading companies, June 19, 1816. *Gateway of Old Fort Garry, Main St.*—Tablet to mark the sites of Fort Rouge, established in 1738; Fort Gibraltar, built 1804; Old Fort Garry, headquarters of the Hudson's Bay Company after the coalition with the North West Company, 1821; and New Fort Garry, constructed 1836-39.

SASKATCHEWAN.

Batoche.—*Church Grounds*—Cairn to mark the site of the headquarters of the rebels during the North West Rebellion of 1885. Its capture by General Middleton in May of that year ended the uprising.

Battleford.—*Intersection of 24th St. and 2nd Ave.*—Cairn to commemorate the events which took place there during the North West Rebellion. Poundmaker and his band surrendered there May 26, 1885.

Carleton.—Cairn to commemorate the events connected with Indian Treaty No. 6, negotiated with the Crees by Commissioners of the Crown, whereby an area of 120,000 square miles of territory was surrendered.

Coule.—Cairn to mark the site of Fort Walsh, a North West Mounted Police post, built in 1875, for the purpose of enforcing law and order among the hunting bands of Indians in the Cypress Hills.

Cut Knife Hill.—*Poundmaker Indian Reserve*—Cairn to commemorate the engagement which took place May 2, 1885, between Government troops and the Indians during the North West Rebellion.

Pelly.—Cairn to mark the site of Fort Livingstone, the first capital of the North West Territories, 1876-77. The first session of the North West Council was held there, Mar. 8, 1877.

Rosthern.—Cairn to commemorate the events connected with the engagement which took place at Fish Creek on April 24, 1885, during the North West Rebellion.

ALBERTA.

Calgary.—*Central Park*—Cairn to commemorate the arrival of the North West Mounted Police, August, 1875, and the establishment of their post on the west bank of the Elbow river.

Cluny.—*Blackfoot Indian Reserve*—Cairn to commemorate the signing of the treaty with the Indians, Sept. 22, 1877, whereby they surrendered their rights to 50,000 square miles of territory in the southwest corner of Alberta.

Edmonton.—*Near Provincial Administration Building*—Cut-stone monument to commemorate the services of the Alberta Field Force during the North West Rebellion. These operations averted the danger of an Indian uprising in Alberta.

ALBERTA—concluded.

Fort McMurray.—*Public School Grounds*—Cairn to commemorate the events connected with the ancient Methye portage trade route, discovered by Peter Pond in 1778 and used continuously for more than a century by fur traders and explorers.

Frog Lake.—*Cemetery*—Cairn to the memory of those massacred there April 2, 1885, by rebel Indians under Big Bear during the North West Rebellion.

Jasper National Park.—*Near Bridge over the Athabaska River*—Cairn to mark the site of Henry House, a post founded by the North West Company in 1811, which later became an important point in the transportation system. *Mouth of the Rocky River*—Cairn to mark the site of Jasper House, a post built by the North West Company between 1827 and 1829. *Old Fort Point, Eastern End of the Bridge over the Athabaska River*—Cairn to commemorate the public services of David Thompson.

L'Amoureux.—*Main Road*—Cairn to mark the site of Fort Augustus, established by the North West Company, 1794, and Fort Edmonton, established by the Hudson's Bay Company, 1795.

Lethbridge.—*Galt Park*—Cairn to mark the site of the first coal mine in Alberta, which was opened on the west bank of the Oldman river by Nicholas Sheran, 1872.

Macleod.—*Intersection of 2nd Ave. and 23rd St.*—Cairn to commemorate the arrival of the North West Mounted Police, October, 1874, and their establishment of this post, which brought law and order into a wild and lawless country.

Peace River.—*Lot 9, Shaftesbury Settlement*—Cairn to mark the site of Fort Fork, in which Sir Alexander Mackenzie wintered in 1792-93, and from which he set out on his quest for the Western Sea.

Rocky Mountain House.—*Main Highway*—Cairn to mark the site of the post built by the North West Company, 1799, which was occupied on different occasions by David Thompson.

Wetaskiwin.—*Edward St.*—Cut-stone monument to commemorate the public services of Rev. Father Lacombe and Rev. John McDougall whose influence with the Indians, during the troublous days of 1885, was a powerful factor in the preservation of peace in Alberta.

BRITISH COLUMBIA.

Alexandria.—*Cariboo Road*—Cairn to mark the site of Fort Alexandria, 1821, the last post established by the North West Company west of the Rocky mountains, and Sir Alexander Mackenzie's farthest point in the descent of the Fraser river, 1793.

Bamfield.—*Cable Building*—Tablet to commemorate the events connected with the laying of the British state-owned cable, the movement for which was initiated by Sir Sandford Fleming in 1879.

Barkerville.—*Main Road*—Cairn to commemorate the events connected with the centre of old Cariboo. The Cariboo gold fields, discovered in 1861, have been an important source of gold production.

Bella Coola.—*North Shore of Dean Channel*—Monument to mark the western terminus of the first journey across the continent of North America; it was reached by Alexander Mackenzie of the North West Company, with nine companions, on July 21, 1793.

Fort Steele.—*Fort Steele-Fernie Highway*—Cairn to mark the site of the first North West Mounted Police fort in British Columbia, 1887.

Friendly Cove.—*Entrance to Nootka Sound*—Cairn to commemorate its discovery in March, 1778, by Captain James Cook. Spain took possession in 1789 and maintained a settlement until 1795.

Hope.—*Intersection of Wallace and Water Sts.*—Cairn to mark the site of Fort Hope, built by the Hudson's Bay Company, 1848.

BRITISH COLUMBIA—concluded.

Kamloops.—*Riverside Park*—Boulder to mark the site of Fort Kamloops and in memory of the pioneer fur traders, who, by establishing themselves in that locality, aided in securing the country for Great Britain.

Kootenay National Park.—*Banff-Windermere Highway*—Cairn in recognition of the public services of Sir George Simpson, Governor of the Hudson's Bay Company's territories, 1821-60.

Langley.—*Mavis St.*—Cairn to mark the site of Fort Langley, the first trading post on the Pacific coast, built by the Hudson's Bay Company in 1827. The only remaining building has been acquired for preservation.

Nanaimo.—*Dallas Square*—Monument to mark the site of the first commercial coal mine in British Columbia, discovered in 1852.

New Westminster.—*Penitentiary Grounds*—Cairn to commemorate the early historic events associated with that city, which was the first capital of the Colony of British Columbia, 1859-68.

Prince George.—*Near Railway Station*—Cairn to commemorate the services of Sir Alexander Mackenzie, the first white man to cross the Rocky mountains and reach the Pacific coast.

Quesnel.—*Park on Front St.*—Cairn to commemorate the events connected with Collins' Overland Telegraph, and the plan to connect America and Asia by telegraph and cable across Bering strait, 1865-66.

Vancouver.—*Stanley Park*—Cairn to mark the place where the S.S. *Beaver*, the pioneer steamship on the Pacific ocean, was wrecked, July 26, 1888. *Marine Drive*—Monument to mark the place where Simon Fraser of the North West Company ended his dangerous exploration of the Fraser river from Fort George in July, 1808. *Near University of British Columbia*—Cut-stone monument to commemorate the first friendly meeting of the British and Spaniards in Pacific waters, June 22, 1792. *Marpole Park*—Cairn to mark the site of one of the largest prehistoric middens on the Pacific coast of Canada. Bone and stone implements and utensils found in it have thrown much light upon the culture status of prehistoric man in that vicinity.

Victoria.—*Gonzales Hill, Summit of a Rocky Point Adjacent to Denison Road*—Cairn to commemorate the exploration of the straits of San Juan de Fuca by the fur-trading companies and the British and Spanish Navies, 1787-92.

Yale.—*Near C.P.R. Station*—Boulder to mark the site of Fort Yale, one terminal of the Cariboo Wagon Road built in 1862-65, which extended northward four hundred miles to the gold mines of Cariboo.

YUKON TERRITORY.

Dawson City.—*Administration Building*—Tablet to the memory of the prospectors and miners who crossed the Chilkat and Chilkoot passes and paved the way for the discovery, in 1896, of the rich gold fields of the Yukon.

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867. This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the institutions and processes by which Canada is governed.

The several stages in the development of its status as a Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held in London in 1926, which defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

PART I.—CONSTITUTION AND GENERAL GOVERNMENT.

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89-100 of the Canada Year Book, 1922-23.

PART II.—PROVINCIAL AND LOCAL GOVERNMENT.

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101-115 of the 1922-23 edition of the Year Book.

Section 1.—The Government of Canada's Arctic Territory.*

The Arctic islands, which constitute part of Canadian territory, are situated to the north of her mainland. They comprise an area in excess of 500,000 square miles. They are a vast number of islands, the principal ones being Baffin, Victoria, Ellesmere, Banks, Devon, Southampton, Somerset, Prince of Wales, Melville, and Axel Heiberg.

These Arctic islands, known as the "Canadian Archipelago", were held previous to 1880 by Great Britain through right of discovery. In 1880 were transferred to Canada. From this date they have been part of Canadian territory. The Dominion first legislated with regard to them in October, 1895. This legislation divided what was then known as the Northwest Territories into four established districts. The District of Franklin included all the then known islands lying to the north of Canada. (Canadian Order in Council, Oct. 2, 1895.)

In 1904 a map was published by the Department of Interior, Canada, setting out practically all the activities of the early explorers and showing the boundary of Canada on the west as the 141st meridian of west longitude extending northerly to the Pole and the boundary on the east as the 60th meridian of west longitude, extending from just east of Ellesmere island northerly to the Pole. This was the first map that clearly indicated the extent of Canadian jurisdiction. Subsequent maps issued by the Dominion Government likewise show these regions as being part of Canada.

Subsequent to the transfer of the northern islands to Canada by the United Kingdom, the Canadian Government manifested its interest by sponsoring and sending into this northern section a number of expeditions for the purpose of further exploration and scientific investigation—1884, S.S. *Neptune*; 1885 and 1886, S.S. *Alert*; 1897, S.S. *Diana*; 1903-05, S.S. *Neptune*; 1906-07, C.G.S. *Arctic*; 1908-09, C.G.S. *Arctic*; 1910, C.G.S. *Arctic*. (See the official publications, *Southern Baffin Island*, 1930, and *Canada's Eastern Arctic*, 1934.)

The above expeditions entered the northern archipelago from the east and carried on scientific investigations and exploration on practically all of the known islands. From 1913 to 1918, extensive studies were made in the Western Arctic. (Report of the Canadian Arctic Expedition, 1913-18.)

The information obtained by these expeditions clearly indicated to the Canadian Government that it was necessary for Canada to establish police supervision and postal conveniences. As a result of this decision police posts, customs offices and postal stations were established at Pond Inlet, Baffin island; Craig Harbour, Ellesmere island; Pangnirtung, Baffin island; Dundas Harbour, Devon island; Bache Peninsula, Ellesmere island; Lake Harbour, Baffin island; Cambridge Bay, Victoria island, and a radio direction station on Resolution island. (*Canada's Eastern Arctic*, 1934.)

In 1922 the Canadian Government inaugurated a yearly patrol to Canada's northern islands. Each year this patrol has carried Government officials including administrative officers, doctors, scientists, and officers and constables of the Royal Canadian Mounted Police to maintain Canadian authority in these regions. Cana-

* Prepared under the direction of R. A. Gibson, Esq., Deputy Commissioner, Northwest Territories, Ottawa.

dian laws and regulations have been progressively introduced into this far-distant north until at the present time Canada has established and equipped administrative offices including Royal Canadian Mounted Police detachments, customs offices, postal stations, hospitals, scientific posts, wireless stations, and schools for the education and convenience of the inhabitants.

The Canadian Government has passed legislation making the laws applicable to the territorial districts on the mainland applicable also to the Arctic islands constituting the District of Franklin, and, through the medium of her police posts and yearly patrols, has assumed the obligation of seeing that the said laws and regulations are complied with by those living or entering into the northern regions.

Game preserves have been established for the protection of the wild life in order that an adequate supply may at all times be readily available to the natives. Laws have been passed requiring that any foreign national entering the Canadian archipelago must first obtain the permission of the Canadian Government authorities at Ottawa. It is also compulsory before such a permit is issued that the proposed entrants undertake to abide by the laws of Canada in force in these regions.

From year to year, as new conditions are brought to light, further steps are thus being taken by the Canadian Government to develop administrative services in this northern territory. The aeroplane is at present playing an important part in this respect, and, as necessity warrants, this method of transportation will be increased. The Royal Canadian Mounted Police are being equipped with a number of aeroplanes for use in the northern districts and the year 1938 finds administrative, medical, and police officers carried to points within the archipelago which heretofore have not been regularly visited.

PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.

Section 1.—Dominion Parliament and Ministry.

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate, and the House of Commons. The Governor General is appointed by the King on the advice of the Government of Canada. Members of the Senate are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

In Subsections 3 and 4, pp. 98 to 108, a brief résumé of the history of parliamentary representation will be found. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which

is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues, and dissolves Parliament and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table 1.

1.—Governors General of Canada, 1867-1938.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.....	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.....	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.....	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.....	Oct. 5, 1873	Nov. 25, 1873
The Marquis of Lansdowne, G.C.M.G.....	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.....	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.....	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.....	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.....	Sept. 26, 1904	Dec. 10, 1904
Field Marshall H.R.H. the Duke of Connaught, K.G.....	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.....	Aug. 19, 1916	Nov. 11, 1916
General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.....	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Rotton, G.C.S.I., G.C.I.E., G.B.E.....	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.....	Feb. 9, 1931	April 4, 1931
Lord Tweedsmuir of Elsfield, G.C.M.G., C.H.....	Aug. 10, 1935	Nov. 2, 1935

Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although one Minister may hold more than one portfolio at the same time, while other Ministers may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the Sixteenth Ministry, are given in Table 2. The complete list of the members of the King's Privy Council for Canada, as at Mar. 1, 1938, is added as Table 3.

2.—Ministries since Confederation and Members of the Sixteenth Ministry.

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422-429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651-653. A list of the members of the Twelfth and Thirteenth Ministries appeared on pp. 76-77 of the 1927-28 Year Book. Members of the Fourteenth Ministry are listed at p. 69 of the 1930 Year Book and members of the Fifteenth Ministry on p. 67 of the 1934-35 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Prime Minister. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Prime Minister. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Prime Minister. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Prime Minister. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Prime Minister. From Dec. 5, 1892, to Dec. 12, 1894.
6. Hon. Sir Mackenzie Bowell, Prime Minister. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Prime Minister. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Prime Minister. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Conservative Administration.) From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Unionist Administration.) From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Prime Minister. (Unionist—"National Liberal and Conservative Party".) From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Prime Minister. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. Richard Bedford Bennett, Prime Minister. From Aug. 7, 1930, to Oct. 23, 1935.
16. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Oct. 23, 1935.

SIXTEENTH DOMINION MINISTRY.

(According to precedence of the Ministers as at the formation of the Cabinet.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. W. L. Mackenzie King, C.M.G.....	Oct. 23, 1935
Member of the Administration and Minister without portfolio.....	Hon. Raoul Dandurand, K.C....	Oct. 23, 1935
Minister of Mines and Resources ¹	Hon. Thomas Alexander Crerar, K.C.....	Oct. 23, 1935
Minister of Justice and Attorney General of Canada.....	Right Hon. Ernest Lapointe, K.C.....	Oct. 23, 1935
Minister of Public Works.....	Hon. Pierre Joseph Arthur Cardin, K.C.....	Oct. 23, 1935
Minister of Finance.....	Hon. Charles Avery Dunning... ..	Oct. 23, 1935
Postmaster General.....	Hon. John Campbell Elliott, K.C.....	Oct. 23, 1935
Minister of Trade and Commerce.....	Hon. William Daum Baler.....	Oct. 23, 1935
Secretary of State of Canada.....	Hon. Fernand Rinfret.....	Oct. 23, 1935
Minister of National Defence.....	Hon. Ian Alistair Mackenzie.....	Oct. 23, 1935
Minister of Pensions and National Health.....	Hon. Charles Gavan Power, M.C., K.C.....	Oct. 23, 1935
Minister of National Revenue.....	Hon. James Lorimer Hsley, K.C.....	Oct. 23, 1935
Minister of Fisheries.....	Hon. Joseph Enoil Michaud, K.C.....	Oct. 23, 1935
Minister of Labour.....	Hon. Norman McLeod Rogers... ..	Oct. 23, 1935
Minister of Transport ²	Hon. Clarence Decatur Howe... ..	Oct. 23, 1935
Minister of Agriculture.....	Hon. James Garfield Gardiner... ..	Oct. 23, 1935

¹ The Departments of Mines, Interior, Immigration and Colonization, and Indian Affairs were organized into the new Department of Mines and Resources on Dec. 1, 1936.

² The Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence were organized into the new Department of Transport on Nov. 2, 1936.

3.—Members of the King's Privy Council for the Dominion of Canada, According to Seniority Therein,¹ as at Mar. 1, 1933.

Note.—In this list the prefix Rt. Hon. indicates membership in the British Privy Council. Besides those mentioned in this list, the Rt. Hon. Sir Lyman P. Duff, G.C.M.G., Chief Justice of the Supreme Court, is a Canadian member of the British Privy Council.

Name.	Date When Sworn In.	Name.	Date When Sworn In.
The Rt. Hon. Sir William Mulock.	July 13, 1896	The Hon. Charles Vincent Massey ²	Sept. 16, 1925
The Rt. Hon. Sir Charles Fitzpatrick ³	Feb. 11, 1902	The Hon. Walter Edward Foster.	Sept. 26, 1925

¹ The ordinary legal limit of duration for each Parliament is five years.

² Period of general elections.

³ Writs returnable.

⁴ Dissolution of Parliament.

⁵ Duration of Parliament

in years, months, and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive.

⁶ Including days (13) of adjournment from Mar. 3 to Mar. 15.

⁷ Not including days (54) of adjournment from Dec. 15 to Feb. 8.

⁸ Not including

days (65) of adjournment from Nov. 25 to Jan. 30.

⁹ Not available at the time of going to press.

Subsection 3.—The Senate.

The British North America Act, 1867, provides in Sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators." In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces—Nova Scotia, and New Brunswick; which three divisions shall be equally represented in the Senate as follows: Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada, specified in Schedule A to Chapter I of the Consolidated Statutes of Canada". Further, under Section 147 of the same Act, it is provided that "in the case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members. Prince Edward Island, when admitted, shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members, respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (Sec. 28) was to be 82, Sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

* A senator's sessional indemnity is \$4,000.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000, respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces—Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia, and Prince Edward Island—were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3, and 4 members, respectively.

In 1882, following the Census of 1881 and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the Census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903 (3 Edw. VII, c. 42) provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by Section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta, and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act by substituting increases of four or eight members for the three or six cited in Section 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, Subsection 6 of Section 1 of which sets out its representation as six members instead of the four granted by the Act of 1867. If Newfoundland were admitted to the Dominion, the normal number of senators would be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given, as at Mar. 15, 1938, in Table 6.

Subsection 4.—The House of Commons.

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia and fifteen for New Brunswick".* Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament".

Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

* The sessional indemnity of a member of the House of Commons is \$4,000.

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.—As set out in the above-mentioned provisions of the British North America Act, the representation in the House of Commons has been readjusted following each of the seven decennial censuses since taken, also as a result of the admission of Manitoba, British Columbia, and Prince Edward Island to Confederation and the creation of portions of the Northwest into Saskatchewan, Alberta, and Yukon. At pp. 74-77 of the 1934-35 Year Book, the problems of redistribution are dealt with in detail, especially those arising out of the 1931 Census. Summarized accounts were also carried in later Year Books down to 1937 (see pp. 79 and 80 of the 1937 Year Book).

The number of representatives of each province elected at each of the eighteen general elections since Confederation is given in Table 7.

7.—Representation in the House of Commons as at Dominion General Elections, 1867-1935.

¹ The representation at the general elections of 1926 and 1930 was the same as in 1925.

The Unit of Representation.—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec within its 1911 boundaries—has also been increased after each census in consequence of the growth of the population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows: 1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

Constituencies and Representatives in the Eighteenth Parliament.—A complete list of the constituencies, with their 1931 populations, the voters on the list and votes polled at the general election of Oct. 14, 1935, together with the names and addresses of those then elected to the House of Commons of the eighteenth Parliament of Canada, will be found in Table 8. Changes occurring at subsequent by-elections to Mar. 15, 1938, are indicated in the footnotes.

Subsection 5.—The Dominion Franchise.

An article by Col. J. T. C. Thompson, Dominion Franchise Commissioner, appeared at pp. 86-88 of the 1937 edition of the Year Book. Briefly, the qualifications for the Dominion franchise are that one must be a British subject, of the full age of 21 years, and have been ordinarily resident in Canada for at least one year, and resident for three months in the electoral district in which application is being made for registration.

The Use of the Franchise.—The numbers of voters on the lists and the numbers of votes polled at the general elections of 1925, 1926, 1930, and 1935 are given in Table 9.

9.—Numbers of Voters and Votes Polled at the General Elections of 1925, 1926, 1930, and 1935.

Province.	Numbers of Voters on the Lists.				Numbers of Votes Polled.

¹ Each voter in the double member constituency of Queens County, P.E.I., had two votes; in 1935, 23,467 voters on the list cast 37,576 votes.

² Each voter in the double member constituency of Halifax, N.S., had two votes; in 1935, 60,503 voters on the list cast 85,986 votes.

³ Each voter in the double member constituency of St. John-Albert, N.B., had two votes; in 1930, 37,067 voters on the list cast 50,121 votes.

⁴ Each voter in the double member constituency of Ottawa, Ont., had two votes; in 1930, 61,535 voters on the list cast 97,309 votes.

⁵ Not including one electoral district in which the return was by acclamation.

⁶ Not including two electoral districts in which the returns were by acclamation.

Section 2.—Provincial Governments.

Table 10 gives the names and areas, as in 1938, of the several provinces, territories, and provisional districts of the Dominion, together with the dates of their creation or admission into the Confederation and the legislative process by which this was effected.

10.—Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation, and Legislative Process by which Admission was Effected.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

³ Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

⁴ Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabasca, Alberta, and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1885.

⁵ By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin, and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

⁶ Too small to be enumerated.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101-115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table 11. Details regarding Provincial Legislatures and Ministries from Confederation to 1924 were given on pp. 75-84 of the 1924 Year Book.

11.—Lieutenant-Governors of Provinces, 1867-1937, Legislatures and Ministries, 1924 to the Present.

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life. Legislatures from Confederation to 1923 will be found on p. 75 of the 1924 Year Book.

THE TERRITORIES.

Nora.—In 1888 the districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (Yukon and the provisional districts of Franklin, Keewatin, and Mackenzie) are now administered by the Lands, Parks and Forests Branch, Department of Mines and Resources. The Deputy Minister of the Department is, *ex officio*, the Commissioner of the Northwest Territories, which comprises the three provisional districts.

PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.*

Section 1.—Representatives Within the Empire.

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication with the British Government than that provided by occasional official visits or by correspondence. Of the Canadian colonies, Nova Scotia was the first to adopt this plan, its Legislature having appointed an Agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. Following Confederation, several of the provinces continued to adhere to, and in certain cases enlarge upon, the practice to the extent of themselves appointing Crown Agents or Agents General. Such developments as have taken place are dealt with on p. 92 of the 1934-35 Year Book.

The High Commissioner for Canada.—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial Agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments, which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). The duties of the office are defined in the Act as follows:—

“The High Commissioner shall—

“(a) act as representative and resident agent of Canada in Great Britain and in that capacity execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;

* Revised by the Department of External Affairs, Ottawa. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 25 cents.

- "(b) take the charge, supervision and control of the immigration offices and agencies in Great Britain, under the Minister of Immigration and Colonization;
- "(c) carry out such instructions as he, from time to time, receives from the Governor in Council respecting the commercial, financial and general interests of Canada in Great Britain and elsewhere."

Sir Alexander Galt was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by Sir Charles Tupper. Lord Strathcona and Mount Royal was appointed in 1896. Sir George H. Perley took charge of the High Commissioner's Office in 1914 but was appointed High Commissioner only on Oct. 12, 1917. The Hon. P. C. Larkin was appointed in February, 1922, and after his decease (Feb. 3, 1930) the Hon. G. Howard Ferguson was appointed on Nov. 28, 1930. On Nov. 8, 1935, the Hon. Vincent Massey succeeded Mr. Ferguson in this post. The office of the High Commissioner for Canada is in Canada House, Trafalgar Square, London, S.W. 1.

High Commissioner of the United Kingdom in Canada.—His Majesty's Government in the United Kingdom in April, 1928, appointed a High Commissioner in Canada, Sir William H. Clark, who was succeeded in January, 1935, by Sir Francis Floud, K.C.B. The High Commissioner resides in Ottawa, and his position corresponds to that of the High Commissioner for Canada in the United Kingdom. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

"A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in Section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

"We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

"The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers'."

Section 2.—Diplomatic Representation Abroad.

The Canadian Minister to the United States.—For many years the diplomatic business between Canada and the United States has been steadily increasing as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War, a former British Ambassador at Washington, Lord Bryce, said that between two-

thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington, under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the War. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through diplomatic channels. After the retirement of this mission, Canada was represented in Washington by Mr. M. M. Mahoney, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Vincent Massey was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada. Mr. Massey took up his duties in February, 1927, and held office until July 23, 1930. Hon. W. D. Herridge, who was appointed Minister to the United States on Mar. 7, 1931, resigned his appointment Oct. 23, 1935. The Hon. Sir Herbert Marier, K.C.M.G., presented his credentials as Canadian Minister on Oct. 20, 1936. The Canadian Legation in Washington is situated at 1746 Massachusetts Avenue.

The Canadian Minister to France.—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. Hector Fabre, who also represented for a time the Government of Quebec. After his death Hon. Philippe Roy was appointed in May, 1911, with the title of Commissioner General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada. The Canadian Legation in Paris is situated at No. 1, rue François premier.

The Canadian Minister to Japan.—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. Marler was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada. On his appointment as Canadian Minister at Washington he was succeeded by the Hon. R. Randolph Bruce, who presented his credentials to the Emperor of Japan on Nov. 7, 1936. The Canadian Legation is at 16 Omote-Cho, Sancho-me, Akasaka-Ku, Tokyo.

The Permanent Delegate of Canada to the League of Nations.—The practice of appointing permanent representatives at Geneva accredited to the League of Nations has been largely followed by those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able, without difficulty, to include in the personnel of their delegations to the Assembly and Council various advisers and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the countries represented on the Governing Body of the International

Labour Office, made this disadvantage especially felt. Accordingly, the position of Dominion of Canada Advisory Officer, League of Nations, was created and Dr. W. A. Riddell was appointed to the post on Jan. 1, 1925. He was succeeded by Mr. H. H. Wrong on Oct. 25, 1937.

The duties of the Permanent Delegate are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations before-named". The office of the Canadian Permanent Delegate is situated at 41, Quai Wilson, Geneva.

Section 3.—Diplomatic Representation in Canada.

Reference has been made in Section 2 to the beginnings of a Canadian diplomatic service with the appointment of the Hon. Vincent Massey as Canadian Minister at Washington, in 1926, and its extension to France and Japan. These countries have all reciprocated by establishing legations in Ottawa through which their governments transact diplomatic business direct with the Canadian government. In addition, Belgium is also represented by an Envoy Extraordinary and Minister Plenipotentiary in Ottawa.

The following list gives the addresses of the legations with the dates of establishment and the present Ministers:—

Legation of the United States of America: (Established 1927.)

Address: Wellington Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary*: (Vacant as at Mar. 26, 1938, *Chargé d'Affaires, ad interim*, Mr. J. F. Simmons.)

Legation of France: (Established 1928.)

Address: 42 Sussex Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary*: Count Robert Dampierre.

Legation of Japan: (Established 1928.)

Address: 140 Wellington Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary*: Minister Designate as at Mar. 26, 1938, Baron Tomii.

Legation of Belgium: (Established 1937.)

Address: Stadacona Hall, 395 Laurier Avenue East, Ottawa. 680 Sherbrooke Street West, Montreal. *Envoy Extraordinary and Minister Plenipotentiary*: Baron Silvercrus.

PART V.—CANADA AND THE LEAGUE OF NATIONS.*

The League of Nations is an association of fully self-governing States whose relations are governed by the Covenant. The League of Nations acts through an Assembly and Council composed of representatives of Governments. Fifty-eight States are at present Members of the League, as compared with forty-two at the

* The League of Nations Society in Canada, 124 Wellington St., Ottawa, is the authorized agent for the publications of the League of Nations.

time of the first Assembly in 1920. Canada, as a signatory of the Treaties of Peace, is an original Member of the League.

The League of Nations has two aims: (1) to preserve peace and to seek a settlement of international disputes; and (2) to organize in the most varied spheres co-operation of peoples, with a view to the material and moral welfare of humanity.

The Covenant, which constitutes the fundamental charter of the League of Nations was drafted in 1919 by a Commission of the Peace Conference and inserted at the head of the several Treaties of Peace. It came into force on Jan. 10, 1920.

The Organs of the League.—The organs of the League are:—

- (a) The Assembly;
- (b) The Council;
- (c) The Secretariat;
- (d) The International Labour Organization, (see Chapter XIX);
- (e) The Permanent Court of International Justice.

The Assembly.—The Assembly consists of representatives of the members of the League, and meets annually in ordinary session each September in Geneva. At the 18th Assembly in September, 1937, the Canadian Delegates were the Hon. Raoul Dandurand, the Hon. J. L. Ilsley and the Hon. Vincent Massey.*

The Council.—The Council, which originally consisted of five permanent members and four non-permanent members, now consists of four permanent members (the British Empire, France, Italy, and the U.S.S.R.) together with eleven non-permanent members elected for three years from among the States Members of the League. The non-permanent members of the Council are at present as follows: Ecuador, Poland, and Roumania, terms expiring in 1938; Bolivia, China, Latvia, New Zealand, and Sweden, terms expiring in 1939; Belgium, Iran, and Peru, terms expiring in 1940. Canada was a member of the Council of the League from 1927 to 1930.

The Council, which normally meets four times a year and more frequently if circumstances should require it to do so, may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

The Secretariat.—The Permanent Secretariat is the Civil Service of the League. The staff is appointed by the Secretary General with the approval of the Council. The officials of the Secretariat of the League are exclusively international officials, having international and not national duties. The first Secretary General, Sir Eric Drummond, who was named in the Annex to the Covenant, resigned in 1933 and was succeeded by M. Joseph Avenol, who is assisted by three Deputy Secretaries General and by one Under-Secretary General.

Permanent Court of International Justice.—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at The Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the

* The Report of the Canadian Delegates to the Eighteenth Assembly of the League of Nations is obtainable from the King's Printer, Ottawa, price 10 cents.

Court provides that any State may recognize as compulsory, the jurisdiction of the Court in all or any classes of legal dispute concerning:—

- (a) The interpretation of a Treaty.
- (b) Any question of international law.
- (c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparations to be made for the breach of the international obligation.

Canada has been a member of the Court from its establishment, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

The Budget of the League.—The expenditure of the League is covered by the contributions of States Members which are fixed in accordance with a scale which takes into account the population, area, and public revenue of each State concerned. The budget for the year 1938 was 22,682,148 gold francs reduced after taking account of the returnable surplus to 20,806,753 gold francs. This net sum included 10,202,404 gold francs for the work of the Assembly, Council, and Secretariat; 5,408,135 gold francs for the International Labour Organization, and 1,878,035 gold francs for the Permanent Court of International Justice; the balance of 3,318,178 gold francs is allocated to buildings and pensions. Canada's share of this net assessment is 35/932 of the total, or 780,114·20 gold francs.

Membership of the League of Nations.—The States which are Members of the League (January, 1938) are as follows:—

Afghanistan	Finland	Panama
Union of South Africa	France ¹	Paraguay ¹
Albania	Greece ¹	Peru
Argentine Republic	Guatemala	Poland
Australia	Haiti	Portugal
Austria	Honduras ¹	Roumania
Belgium	Hungary	Salvador ¹
Bolivia	India	Siam
Bulgaria	Iran	Soviet Socialist Republics, Union of
Canada	Iraq	Spain
Chile	Irish Free State	Sweden
China	Italy ¹	Switzerland
Colombia	Latvia	Turkey
Cuba	Liberia	United Kingdom of Great Britain and Northern Ireland
Czechoslovakia	Lithuania	Uruguay
Denmark	Luxemburg	Venezuela
Dominican Republic	Mexico, United States of	Yugoslavia
Ecuador	Netherlands	
Egypt	New Zealand	
Ethiopia	Nicaragua ¹	
Estonia	Norway	

¹ By a communication dated June 23, 1936, Honduras gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant. Paraguay and Nicaragua manifested the same intention by telegram dated Feb. 23, 1935, and June 26, 1936, respectively. Salvador gave notice on July 23, 1937, and Italy on Dec. 1, 1937, of their intention of withdrawing from the League.

CHAPTER IV.—POPULATION.*

The Population chapter of the Year Book is a *précis* of the results of investigations into the number and the constitution of the population made in the seven censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1931, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses. Owing to the extent of the field covered, it is quite impossible to include in each edition of the Year Book a full digest of population statistics. The policy adopted, therefore, is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. After complete and accurate summary statistics have been given publicity, the chapter is cut down to skeleton limits, with adequate references, until the next census. The 1934-35 Year Book gave at pp. 98-169 as complete a picture of the 1931 census statistics as will appear in one Year Book. In the present edition, the chapter has been cut down except in regard to Section 15—Occupations of the People—which subject has not previously received treatment for the Census of 1931.

Under the Canadian constitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 101-102 of this volume. But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing, and occupations of the people, severally, constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their full value is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the business of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle; i.e., each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method, adopted in the United Kingdom, each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees". A date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, gaols, lunatic asylums, etc., are counted where found.

* This chapter has been revised by A. J. Pelletier, F.S.S., Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

For footnotes, see end of Table 3.

Early Censuses.—The credit of taking the first census of modern times belongs to Canada; the year was 1666, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the Census of 1666 was a systematic "nominal" enumeration of the people, taken on the *de jure* principle on a fixed date, showing age, sex, occupation, and conjugal and family condition. A second census in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and

England from the first year of the nineteenth) and that, in the United States, the census begins only with 1790, the achievement of the primitive St. Lawrence colony in instituting what is to-day one of the principal instruments of government throughout the civilized world, may call for more than passing appreciation.

The Census of 1666 (the results occupy 154 pages in manuscript, and are still to be seen in the Archives of Paris, or in a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 10,904, including 1,538 Indians settled in villages and living a civilized life under the supervision of the missionaries. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present too much detail, some of which is in the Chronology on pp. 69-77, it may be said that at the time of the cession (1763) the population of New France was nearly 70,000 (69,810 in 1765), while another 10,000 French (thinned to these proportions by the expulsion of the Acadians) were scattered through what are now Nova Scotia, New Brunswick, and Prince Edward Island. The British population of Nova Scotia was 8,104 in 1762, thirteen years after the foundation of Halifax in 1749.

Our chief sources of statistics for half a century and more after the cession are the reports—more or less sporadic—of colonial governors, though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of Lower Canada was approximately 163,000, while the newly constituted province of Upper Canada, under Lieutenant-Governor Simcoe, numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the populations of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 24,600, (1841) 47,042.*

The policy of irregular census-taking was supposed to have been ended after the union of Upper and Lower Canada by an Act, passed on Sept. 18, 1841, which provided for a census in the year 1842 and every fifth year thereafter, but under this Act only the census of Upper Canada was taken and the following year on Dec. 9, the Act was amended, the reason being stated as follows: "Whereas the Census of the inhabitants of Lower Canada, for the year one thousand eight hundred and forty-two as required by an Act of this Legislature, . . . hath not been duly taken . . . and whereas it is of the greatest importance that such Census should be taken. . . . Be it therefore enacted . . .". The Census of 1844 of Lower Canada was taken under this Act.

Another Act was passed and given Royal Assent on July 28, 1847, creating a 'Board of Registration and Statistics' with instructions "to collect statistics and adopt measures for disseminating or publishing the same" and providing for a census to be taken in the year 1848, to be repeated in 1850 and every fifth year thereafter. Under this Act a census of Upper Canada was taken in 1848.

* A résumé of the results of all the censuses taken in Canada between 1666 and 1931 has been published in bulletin form and is included in Vol. I, Census of 1931.

Finally an Act was passed on Aug. 30, 1851, providing for a census to be taken in January, 1852, then in the year 1861 and thereafter every tenth year, and that better provision should be made for taking the census. The first census thereunder was taken in January, 1852, and, as similar censuses were taken by New Brunswick and Nova Scotia, we have a regular measure of population growth in Canada over the past 80 years. The 'fifties saw a very rapid development, especially in Ontario, and the 'sixties showed only less substantial gains. In the years following Confederation there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17·23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800. It has increased by five millions in the past thirty years.

Expansion in the Twentieth Century.—It is within the present century that the most spectacular expansion of the population of Canada has taken place. The outstanding feature was, of course, the opening to settlement of the West. The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific railway in the 'eighties and 'nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, forming the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of \$1,500,000,000 between 1900 and 1912—to finance large constructive undertakings (chiefly railway, municipal, and industrial) which characterized the movement. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000 and, though at least a third of these were lost (partly in the return to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural "drag" of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in, to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless, the decade which closed with the Census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and, though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

Results of the Census of 1931.—The total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 on June 1, 1921, an increase of 1,588,837 or 18·08 p.c. in the decade, as compared with 21·94 p.c. and 34·17 p.c. during the decades 1911 to 1921 and 1901 to 1911, respectively.

During the decade 1911-21 the countries which comprise the British Empire, and more especially the United States which was in the Great War for only nineteen months as against Canada's fifty-two, had suffered less in actual loss of life from the War and its consequences than the continental countries of Europe. None of them declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5.0 p.c., as compared with an increase of 10.9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2.6 p.c., as compared with 6.5 p.c. between 1901 and 1911. Nor has this situation been much improved in the post-war decade 1921-31, for the increase in England and Wales during these years was but 5.4 p.c. and Scotland actually showed a decrease of 0.8 p.c. Of the overseas Dominions, New Zealand, according to the official estimate* increased her population from 1,218,913 to 1,452,747, or by about 19 p.c. for the decade ended 1931, as compared with 20.9 p.c. and 30.5 p.c., respectively, for the decades ended 1921 and 1911. In the case of the white population of South Africa, much the same condition obtained. The Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921, or by 22.01 p.c., as compared with 18.05 p.c. for 1901-11, and to 6,552,606 in 1931 according to the official estimate,* or by 20.5 p.c. in the decade 1921-31. The population of the continental United States increased between 1920 and 1930 from 105,710,620 to 122,775,046, an increase of 16.1 p.c., as compared with 14.9 p.c. in the decade 1910-20 and 21 p.c. in the decade 1900-10.

Considering now the movement of population within the Dominion of Canada itself, it is evident from Table 1 that in this country, as formerly in the United States, there is a distinct movement of population from east to west. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c. and for the decade 1921-31 the increase was from 2,480,664 to 3,047,792, or 22.86 p.c. From 1921 to 1931 the five eastern provinces increased from 6,294,655 to 7,315,041, an increase of 1,020,386 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 16.2 p.c. over the 1921 population. The same conclusion may be deduced from Table 2, which shows that while in 1871 only 2.97 p.c. and in 1881 only 3.89 p.c. of the population of the country dwelt west of the Lake of the Woods, the percentage in 1891 was 7.23; in 1901, 12.02; in 1911, 24.08; in 1921, 28.37; and in 1931, 29.51.

On the other hand, the Maritime Provinces, which in 1871 contained 20.80 p.c. of the total population of the Dominion, had, in 1881, 20.13 p.c.; in 1891, 18.22 p.c.; in 1901, 16.64 p.c.; in 1911, 13.02 p.c.; in 1921, 11.38 p.c.; and in 1931, only 9.72 p.c. of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population. Their proportion of the total was 60.77 p.c. in 1931, as compared with 76.23 p.c. in 1871, 75.98 p.c. in 1881, 74.54 p.c. in 1891, 71.34 p.c. in 1901, 62.90 p.c. in 1911, and 60.25 p.c. in 1921. In other words, the net result of the sixty years has been that in 1931 three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

* In both New Zealand and Australia the 1931 censuses were postponed and were taken in March, 1930, and June, 1933, respectively.

Centres of Population.—The "centre of population"* for the Dominion of Canada was carefully worked out for each census from 1851 to 1931, inclusive, and showed a definite north-westward movement up to 1911, westward for the next decade and northward for 1931. For the censuses of 1851 to 1881 the location was near Valleyfield, Que.; in 1891, it was 25 miles west of Ottawa; in 1901, near Pembroke; in 1911, 45 miles west of Sudbury; in 1921, 50 miles northeast of Sault Ste. Marie; and in 1931, 35 miles north of Sault Ste. Marie.

Density of Population.—The density of population in 1931 (*i.e.*, the number of persons per square mile of the land area as in that year), as compared with 1921, 1911, and 1901, is shown by provinces and for the country as a whole in Table 5.

* The centres of population are the centres of gravity (not the intersections of medianlines). The units of area in which the moments (*i.e.*, population multiplied by distance from a fixed point) were calculated, were the permanent counties or census divisions, of which there are about 220, the same units being used so far as possible for all censuses from 1851 to 1931. The geographical centre of the unit area was assumed to be the centre of population of that unit except in the cases of the thinly settled northern areas of counties with very large cities, where special adjustments were made.

5.—Area and Density of Population of Canada, by Provinces, 1901-31.

¹ The populations of Ontario, Quebec, Manitoba, and Northwest Territories were adjusted for 1911 according to the provisions of the Boundary Extensions Acts, 1912, but such adjustment was not carried back to 1901.

² Populations of Northwest River Arm and Rigolet, on Hamilton Inlet, as in 1921, have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927.

Figures showing the density of population in 1931, by counties and census divisions, were given at pp. 109-110 of the 1934-35 Year Book. Generally speaking, the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5.49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

The densities of population in various countries in recent years are given in Table 6. It should not be assumed, however, that a low density is necessarily evidence of under-population. If density could be expressed in terms of estimated habitable area, the figures would be more comparable, but even then natural physical factors, such as climate, topography, physical condition of the soil, mineral wealth, etc., would not be adequately weighted. These considerations should be borne in mind when comparing the figures of this table.

6.—Densities of Population in Various Countries in Recent Years.

NOTE.—The following figures, for countries other than Canada and China, are based on data taken from the Statistical Year Book of the League of Nations 1935-37. The population figures of the latest census are used and total population is taken except where indicated otherwise by footnotes.

¹ Estimate as of Dec. 31, 1931, taken from Canada Year Book, 1934-35, p. 168.

² Estimate as at Dec. 31, 1935.

Elements of Growth.—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, make it difficult to determine how far the growth of population since the commencement of the twentieth century is due to natural increase and how far to immigration. In Table 7 figures of movement are given as closely as they can be estimated. During the decade 1911-21, in addition to 60,000 Canadians who died overseas and nearly 20,000 who took their discharge in the United Kingdom, there were also great numbers of residents of Canada—most of them recent immigrants—who left Canada to join the forces of the Mother Country and her allies in the Great War and did not return.

¹ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. ² This figure includes also the 50,000 Canadian lives lost at the Front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

Section 2.—Sex Distribution.

Throughout the older countries of the world there is usually found an excess of female over male population, more especially as in most of these countries the census is taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine; and (5) the preponderance of males among emigrants. In the newer countries of the world, however, the preponderance of males among immigrants results in a general excess of male over female population. These phenomena are exemplified for both the older and the newer countries in Table 9.

In Canada there has been an excess of male population from the commencement of its history, the first census, 1666, showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, more especially since the French-Canadian population, after about 1680,

was not reinforced by immigration from the Old World. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,067 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada, and since Confederation the same phenomenon of considerable excess of males has occurred throughout the growing northwest. The great immigration of the first decade of the present century resulted in raising what is called the "masculinity" of the Canadian population (*i.e.*, the excess of males over females per 100 of population) to the highest point in recent history, *viz.*, 6.07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 young Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of our population was only 3 p.c.—515 males to 485 females per 1,000 of population.

In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has increased in the eastern provinces and decreased in the western ones, where it was formerly greatest. In Table 8 statistics are presented, showing the number of males and females in each of the provinces and territories at each census since 1871. A table showing the proportions of the sexes and excess of males per 1,000 of population, 1871-1931, appears at p. 113 of the 1934-35 Year Book. The statistics of Table 9 show the position of Canada among other countries of the world in regard to masculinity.

Section 3.—Conjugal Condition.

In Table 10 are given, in summary form, the statistics of the conjugal condition of the population, as single, married, widowed, divorced, and legally separated, for 1871 and subsequent censuses. Especially notable is the larger proportion of married in the more recent years. This is mainly attributable to the larger proportion of adults to total population in our own time. Noteworthy also is the larger proportion of divorced and legally separated in later years. A table showing the conjugal condition of the people, as percentages of the total population, was given at p. 110 of the 1936 Year Book. Another table, showing conjugal condition by sex and provinces, will be found at the same place. At pp. 115-116 of the 1934-35 Year Book a table appears showing the conjugal condition of the 1931 population, 15 years of age or over by age groups. The reader is referred to p. 172 of this volume for details of divorces granted in the years 1918-37.

10.—Conjugal Condition of the Population, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921, and 1931.

Census Year and Sex.	Single.	Married.	Widowed.	Divorced.	Legally Separated.	Not Given.	Total.

² Legally separated included with married.

³ Legally separated in-

Section 4.—Age Distribution.

The same causes which have in the past rendered the sex distribution of population in Canada somewhat unusual have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on in the settlement of a new country, where there is land and food for all and where the early disproportion of the sexes has been overcome, there is a very high rate of natural increase, and an extraordinarily large proportion of children among the population. Thus in 1871 (see Table 11), 286.91 out of every 1,000 of the population of Canada were children under 10 years of age, and over half the total population (526.76 out of every 1,000) were under 20 years of age. But, with the growing urbanization of population, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231.83 were under 10 years of age and 423.42 under 20 years of age. In 1921, however, 239.67 per 1,000 of the population were under 10 years of age and 434.81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212.70 per 1,000 of the population, and of persons under 20 to 416.39 per 1,000.

Table 12 shows the varying age distribution of the population of the respective provinces. At p. 118 of the 1934-35 Year Book details of the age distribution of the population of the Dominion, by sex, for the census years 1881 to 1931 were given.

Age Distribution by Sex.—An interesting table of quartile and decile age distribution, by sex, with textual interpretation, was given at pp. 119-120 of the 1934-35 Year Book. It is not repeated in order to conserve space.

Section 5.—Racial Origins.

In six out of seven censuses of Canada since Confederation the racial origin of each person has been secured, the exception being 1891. The object of this information is to ascertain from what basic ethnic stocks the Canadian population, more particularly the recently immigrated population, is derived. The answer "Canadian" is not accepted under this heading, as the purpose of the question is to obtain, in so far as possible, a definition of "Canadian" in terms of racial derivation. Of this procedure of the census, criticism has been received on two main grounds: (a) that there are Canadians whose family is of several generations residence in the country who may not know their ultimate racial origin, or who may be of very mixed racial origin; (b) that the practice tends to perpetuate racial distinctions which it is desirable to obliterate. As against these criticisms the following three points must be considered: (a) that the Canadian whose family is of three or more generations residence is enumerated and differentiated through the census question on the birthplace of parents for which statistics from the 1931 Census appeared at pp. 134-139 of the 1934-35 Year Book; (b) that notwithstanding the desirability of racial assimilation, there are special features in connection with the process that require appraisalment and study—for example, 271 children of Chinese fathers and 842 of Japanese fathers were born in Canada in 1931. Again, the fact that the constitution of Canada is based on the presence of two dominant races points to the desirability of a measurement of these factors: only recently it has been widely pointed out that the original French colony, numbering 75,000 at the date of the Conquest, has expanded to over three millions to-day. Measurements of this kind would be impossible if the answer "Canadian" instead of "French" were accepted under the heading of racial origin, yet undoubtedly if the descendants of the original French colonists are not "Canadians", no one is; (c) finally, racial origin is an important subject for study in a "new" country like Canada from a scientific standpoint, *i.e.*, from the standpoint of the student of ethnology, criminology, and the social and "biometric" sciences in general.

To accept the answer "Canadian" to the question on racial origin would confuse the data and defeat the purpose for which the question is asked.

Racial Distribution.—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. On the other hand, the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups that help to compose the nation (see Table 13) indicate that the people of Scandinavian, German, and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c., and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-war numerical strength of certain ethnic stocks in Canada with pre-war returns cannot be made with any certainty. For example, a number of people reported as of Ukrainian stock in the Seventh Census were described in the Censuses of 1921 and 1911 as Galician, Bukovinian, Ruthenian, or Russian.

A perspective of the percentage relationship of the origin groups to the population as a whole was given in tabular form for the censuses 1871 to 1931 at p. 123 of the 1934-35 Year Book. Table 13, below, gives the actual figures for the same years.

Together, the British and French groups constituted, in 1931, 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. The immigration of continental Europeans to Canada during the past thirty years has, of course, been the cause of this decline.

13.—Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921, and 1931.

NOTE.—Origins were not taken in the Census of 1891.

¹ The figures for 1871 cover the four original provinces of Canada only. ² Incomplete in 1871; includes "half-breeds" in 1901. ³ Includes Danish, Icelandic, Norwegian, and Swedish; in 1921 they numbered, respectively, 21,124, 15,876, 68,856 and 61,503; in 1931, 34,118, 19,382, 93,243 and 81,306.

Section 6.—Religions.

At each of the censuses from 1871 to 1931 every inhabitant of Canada has been asked to state the religious body of which he is a member or an adherent. During the sixty-year period there have been various fluctuations in the proportions of the population belonging to the leading religious bodies, and these fluctuations are, in a new country like this, largely occasioned by the religious affiliations of immigrants.

Throughout the sixty-year period something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41.30. Methodists were 16.27 p.c. of the population in 1871 but fell to 13.19 p.c. in 1921, while Presbyterians increased from 15.63 p.c. in 1871 to 16.04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists

and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, left that body the second largest religious body in the Dominion in 1931 with 19.44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada amounted to 8.39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14.17 p.c. in 1871 to 12.69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16.02 p.c. in 1921, followed by a slight falling-off to 15.76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6.87 p.c. in 1871 to 4.27 p.c. in 1931.

The immigration from non-English-speaking countries during the first three decades of the twentieth century led to a great growth of the religious bodies which have as their home the continent of Europe. Thus the Lutherans, who were only 1.09 p.c. of the population in 1871 and 1.72 p.c. in 1901, rose to 3.80 p.c. in 1931. The Jews, again, who were only 0.03 p.c. in 1871 and 0.31 p.c. in 1901, were 1.50 p.c. in 1931. The adherents of the Greek Orthodox Church, who in earlier years were not distinguished from Greek Catholics (the two together being only 0.29 p.c. in 1901) were 0.99 p.c. in 1931.

Of the total population in 1931 (10,376,786), 16,042 or 0.15 p.c. did not state their religion while 54,164 persons, or 0.52 p.c., belonging to small sects, were classed as "various" and 21,071 or 0.20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1.50 p.c. were Jews, 24,087 or 0.23 p.c. were Confucians, 15,784 or 0.15 p.c. were Buddhists, and 5,008 or 0.05 p.c. were pagans. In Table 14 the totals for each religion are brought together for all censuses since Confederation. Further analyses showing the percentages of specified religions at each census, 1871-1931, and the numbers accredited to each specified religion, by provinces, were given at pp. 127-129 of the 1934-35 Year Book.

¹ The figures for 1871 cover the four original provinces of Canada only.² Including Tunkers.³ Mennonites were included with Baptists prior to 1901.⁴ Practically all Methodists and Congregationalists and a large number of Presbyterians united to form the United Church of Canada in 1925, although a relatively small number reported themselves as "United Church" in 1921, chiefly in Western Canada where the movement towards union began.⁵ In earlier censuses only small numbers were included, and Greek Catholics and Greek Orthodox were included under the general term "Greek Church". A rapid increase of both Greek Catholics and Greek Orthodox has been shown for recent censuses and, since the former owe obedience to the Pope in matters of faith, they have been included with the Roman Catholics for 1931.⁶ Included with "All other" religions for 1891.⁷ Including 189,654 Greek Catholics (see footnote 5).

In 1931, for the first time in the history of the Dominion Census, the religions of the people were cross-classified according to racial origin. The results, for Canada as a whole, were shown at pp. 116-117 of the 1936 Year Book.

Section 7.—Birthplaces.

The birthplaces of the population of Canada, as at each of the seven censuses, are shown by Canadian born, other British born, and foreign born (United States born and other foreign born), in Table 15. The table shows that, in 1871, 97.28 p.c. of the population was born under the British flag, while sixty years later the percentage had declined to 89.18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of immigration after 1900. The Census of 1931 showed declines in the proportions of other British born and United States born as compared with 1921 but an increase in the percentage of other foreign born; the proportion of Canadian born has remained practically unchanged.

Worthy of note is the fairly steady increase of population born in the United States from 1.85 p.c. in 1871 to 4.25 p.c. in 1921, and the subsequent decline to 3.32 p.c. in 1931. Other foreign born increased from 0.87 p.c. in 1871 to 6.23 p.c. in 1911, declined to 5.87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7.50 p.c. by 1931.

¹ Includes some hundreds of persons born at sea.

The birthplaces of the 1931 population were tabulated for the various provinces and territories, by sex, at p. 118 of the 1936 Year Book. In the Maritime Provinces, the population is shown by the Census of 1931 to be about 93 p.c. native born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c.

At pp. 133-140, inclusive, of the 1934-35 Year Book, a very complete analysis was given of the birthplaces of the Canadian people. Tables there published show: population classified by province of residence and province of birth; population, for each province, classified by nativity of parents; Canadian born classified according to nativity of parents, by racial origin; and rural and urban population, other than Canadian born, classified according to year of arrival in Canada.

Section 8.—Citizenship and Naturalization.

At the latest four decennial censuses, those of 1901, 1911, 1921, and 1931, inquiry has been made into the citizenship of the foreign-born population. The relevant instructions given to enumerators at the Census of 1931 were published at p. 141 of the 1934-35 Year Book.

Table 16 deals with the citizenship of the Canadian born, the British born, and the foreign born of the population residing in Canada at the date of the Census of 1931. As regards the total (8,069,261) native-born population, 8,052,459 were "Canadian Nationals" and were made up of 8,051,142 persons with uninterrupted citizenship and 1,317 naturalized repatriates. Of the total native born resident in Canada at the date of the census, 16,802 were aliens owing their allegiance to some foreign country—in the case of females usually as a result of marriage. The table on p. 142 of the 1934-35 Year Book showed the country to which allegiance was owed by these 16,802 Canadian-born aliens.

In the case of British born, 11.4 p.c. had not yet acquired Canadian domicile and of the foreign born 45.2 p.c. were still aliens. A more detailed analysis than that given below will be found at p. 143 of the 1934-35 Year Book.

¹ The European country of allegiance was given on p. 142 of the 1934-35 Year Book.

² This column includes foreign-born persons born in places other than continental Europe, Asia, or the United States.

³ The European country of allegiance was given at p. 143 of the 1934-35 Year Book.

The Progress of Naturalization.—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911, and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911, and 153,908 in 1901, or 54.78 p.c., 57.75 p.c., 45.77 p.c., and 55.27 p.c., respectively. Alien residents in Canada showed an absolute decline

between 1911 and 1921 of from 408,175 to 376,098, *i.e.*, from 5.66 p.c. of the population to 4.28 p.c. Between 1921 and 1931, they increased to 507,724, or 4.89 p.c. of the 1931 population. Among the foreign-born residents of Canada, the United States born exceeded those born in any other country, although by continental groups the Europeans were more numerous. Between 1921 and 1931 the U.S. born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the U.S. born who were naturalized to total U.S. born increased from 63.63 in 1921 to 72.44 in 1931, whereas the percentage of continental Europeans who were naturalized fell from 57.88 in 1921 to 49.13 in 1931.

Section 9.—Language Spoken and Mother Tongue.

Official Languages.—In the Census of 1931, 1,322,370 persons were reported as speaking both the official languages of Canada, 6,999,913 speaking English, 1,779,338 speaking French and 275,165 as unable to speak either English or French. In a table on p. 121 of the 1936 Year Book the population was classified by racial origins and as able to speak one, both, or neither of the official languages.

Mother Tongue.—At p. 122 of the 1936 Year Book will be found a table showing the mother tongue of the population, by provinces and for the Dominion.

Section 10.—Rural and Urban Population.

For the purposes of the census the population residing in cities, towns, and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between 'rural' and 'urban' population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned.

A table published at p. 147 of the 1934-35 Year Book gives the rural and urban populations, by provinces and sex, and divides the incorporated urban centres into two groups, *viz.*, under one thousand, and one thousand and over, thereby allowing a closer comparison than is possible from Table 17. The population in urban places having less than one thousand was shown to have decreased for the whole of Canada but increased in Prince Edward Island, Nova Scotia, and British Columbia. In Table 17 are given statistics showing the growth of rural and urban population, respectively, by provinces, since 1891. To a limited extent Table 18 will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban populations.*

* In the United States, urban population, prior to 1930, was classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more with certain minor qualifications, but in 1930 the definition was slightly modified to include townships and other political divisions, not incorporated as municipalities, having a total population of 10,000 or more each, and a population density of 1,000 or more per square mile. The direct result of this modification has been to increase slightly the proportion of urban population.

While a summary comparison between urbanization in Canada in 1931 and in the United States in 1930 would lead us to the conclusion that our country, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, *viz.*, 53.70 p.c. in Canada as compared with 56.2 p.c. in the United States, the fact that in the United States, inhabitants of places having under 2,500 population are included with rural population must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table 18. Thus, at the Census of 1930, the United States had 29.5 p.c. of its population resident in cities of 100,000 and over, while Canada in 1931 had only 22.44 p.c. of its population in such places. The United States had an additional 18 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 4.8 p.c. in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 14.87 p.c. and 4.42 p.c., respectively, of its population. Thus, taking all places of 5,000 and over—the lowest population for which comparative figures are readily available—52.3 p.c. of the population of the United States resided in such places as compared with 41.73 p.c. of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table 17 that in the decade 1921-31, as in the previous one, urban communities absorbed nearly 77 p.c. of the total increase in population, with the result that the urban population of Canada in 1931 exceeded the rural by 767,330. Out of every 1,000 persons in the country, 463 were resident, on June 1, 1931, in rural and 537 in urban communities, as compared with 505 in rural and 495 in urban communities on June 1, 1921; 546 in rural and 454 in urban communities in 1911; 625 in rural and 375 in urban communities in 1901; and 682 in rural and 318 in urban communities in 1891.

From Table 18, showing the distribution of urban population in Canada by size of cities and towns, it is seen that Canada possessed, in 1931, two cities of more than half a million population. These are Montreal and Toronto, with 818,577 and 631,207 inhabitants, respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark and Hamilton, Quebec, and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Details of the population of these and other smaller cities and towns of 5,000 and over, are given by censuses from 1871 to 1931 in Table 19, while the populations of urban communities having, in 1931, a population of from 1,000 to 5,000 each, are given for 1901, 1911, 1921, and 1931 in Table 20.

All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has, therefore, been considered advisable to calculate the total populations resident in what the United States census authorities call the "metropolitan districts". On this basis the total

populations of the larger cities at the Census of 1931 were as follows: 'Greater Montreal', 1,000,159; 'Greater Toronto', 808,864; 'Greater Vancouver', 308,340; 'Greater Winnipeg', 280,202; 'Greater Ottawa' (including Hull), 175,988; 'Greater Quebec', 166,435; 'Greater Hamilton', 163,710; 'Greater Windsor', 110,385; 'Greater Halifax', 74,161; and 'Greater Saint John', 55,611.*

*See 1931 Census Monograph No. 6, *The Rural and Urban Composition of the Canadian Population*, by S. A. Cudmore and H. G. Caldwell.

¹ Some of the towns of 1891 were included with rural.

² As corrected in Census Report, Prairie Provinces, 1916.

³ The populations (48,009, 56,446 and 98,967, respectively) in territory now comprised in the provinces of Alberta and Saskatchewan and in Yukon and the Northwest Territories was classified as rural in the Censuses of 1871, 1881, and 1891.

⁴ Urban and rural populations for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916.

⁵ The urban population of 1907,701, shown in Vol. I, Census 1911, is reduced to 966,842 by the transfer of the populations of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin and St. Vincent de Paul from urban to rural; by adjustments in area of the villages of St. Anne and Ste. Genevieve; and Extension of Boundaries Act, 1912.

⁶ As changed by Extension of Boundaries Act, 1912.

⁷ Vol. I, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Banff, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901.

⁸ This includes South Vancouver and Point Grey, with 1921 populations of 82,287 and 13,736, respectively, which were then classified as 'rural'.

⁹ Members of the Royal Canadian Navy were counted at their homes in the Census of 1931.

18.—Urban Populations, Classified by Size of Municipality Groups, 1911, 1921, and 1931.

Under 500.....	419	87,077	1.21	679	159,410	1.81	760	179,782	1.73
Totals.....	1,050	3,272,947	45.42	1,443	4,352,122	49.52	1,605	5,572,058	53.70

Population is shown in Table 18 to be increasingly attracted to the larger cities. Thus, not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total, but cities of from 100,000 to 500,000 have increased their aggregate population from 5.90 p.c. of the total to 8.46 p.c., and cities of between 5,000 and 100,000 from 17.68 p.c. to 19.29 p.c. in the decade 1921-31. As will be seen, the large absolute increases in the total population of municipalities of less than 1,000 persons for 1921 and 1931 were due almost entirely to the addition of newly incorporated places.*

See also reference in text footnote () at top of p. 145.

19.—Populations of Cities and Towns having over 5,000 Inhabitants, Decennial Censuses 1871-1931 and the Quinquennial Census of 1936.¹

Note.—The cities and towns in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been rearranged as far as possible to cover the same area as in 1931.

¹ The 1936 figures cover towns and villages of the Prairie Provinces only.

² Under the Saskatchewan Town Act, Lloydminster, Alberta, is merged with Lloydminster, Saskatchewan, for municipal purposes.

Rural and Urban Farm Populations.—At p. 126 of the 1937 Year Book statistics of rural and urban farm population, by provinces, as compiled from the Census of 1931, were given, and at p. 299 of the 1934-35 Year Book details regarding farm workers, those farms employing hired labour, the period of employment and the cost of labour were shown. The reader is also referred to the item "Wage-earners" (in agriculture) in the index of the present volume for further information on these topics.

Section 11.—Literacy.

The subject of literacy was discussed at pp. 131-132 of the 1936 Year Book. At p. 157 of the 1934-35 Year Book will be found a table showing the literacy of the population of 5 years and over from 1901 to 1931, at pp. 158-159 of the same edition the same information as is now summarized in Table 21 was given by sex, while on p. 160 was shown the literacy of the population of cities and towns of 30,000 population or over, as in 1931.

21.—Literacy of the Population of 10 Years of Age or Over, by Provinces, 1931.

NOTE.—Corresponding figures for 1921 are to be found in the 1924 Year Book, p. 131.

Section 12.—School Attendance.

At pp. 132-133 of the 1936 Year Book a treatment of this subject will be found, together with tables showing school attendance, (1) of the population 5-19 years of age, by sex, for the census years 1911, 1921, and 1931, (2) of the total rural and urban populations, by sex, for 1931, and (3) of the population 7-14 years of age, by nativity and sex, for 1931.

Section 13.—Blind and Deaf-Mutes.

The 1936 Year Book showed, at pp. 134-135, figures of the number of blind and deaf-mutes by provinces and sex in 1931, together with the number and proportion of such persons as found at the decennial censuses from 1881 to 1931. Summary statistics are given below.

22.—Deaf-Mutes¹ by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.

¹ Not including blind deaf-mutes.

Section 14.—Dwellings and Family Households.

An extensive treatment of this subject, as it came under observation at the Census of 1931, will be found at pp. 136-139 of the 1936 Year Book.

Section 15.—Occupations of the Canadian People.

An article specially prepared for the Year Book, and analysing comprehensively the occupations of the Canadian people as shown by the 1931 Census, appeared at pp. 128-146 of the 1937 Year Book.

Section 16.—Quinquennial Census of the Prairie Provinces.

The latest census of the Prairie Provinces was that taken as of June 1, 1936. The 1937 edition of the Year Book, at pp. 146-152, showed statistics covering the population of each province, by electoral districts, sex, conjugal condition, age distribution, racial origin, birthplace, and by rural or urban habitation. Unfortunately, at the June 1 enumeration a small area in Saskatchewan with 654 inhabitants was not covered and had to be enumerated later. The 1936 figures as published for Saskatchewan in the 1937 Year Book should therefore be corrected by adding 654 to the total rural population there published. An adjustment is also to be made to the urban population by deducting 98 on account of disorganized urban centres; this is also to be added to the rural. The total difference to the rural population is therefore an addition of 752 and that to the urban a deduction of 98, the net result being an addition to the provincial total of 654. Normally the tables would have been republished in this edition, but the error was not apparent until most of the Year Book had been 'made-up'. In Volumes I and II of the 1936 Census, the figures are published in final form.

As the composition of the population of the three provinces, taken as a unit, cross classified according to racial origin and birthplace, is of general interest, the following table has been specially compiled for the Year Book. It shows the birthplaces of both the rural and urban populations for each of the principal racial strains making up the population of the Prairie Provinces. Of the total population of 2,415,545, the number of persons of British racial origin was 1,189,612 or 49.2 p.c., of whom 1,120,242, or 94 p.c. (46.4 p.c. of the total) were born in Canada or in other British lands. The percentage born in Canada was 75. The population of French origin numbered 137,778, or 5.7 p.c. of the total, the great majority being Canadian-born.

Other important elements in the population are the German, Ukrainian, and Scandinavian racial strains, amounting to 12.8 p.c., 9.4 p.c., and 6.8 p.c., respectively. By place of birth, the population is divided as follows: Canada, 1,648,490, or 68.3 p.c.; other British countries, 275,820, or 11.4 p.c.; U.S.A. 152,908, or 6.3 p.c.; and other foreign countries, 338,327, or 14.0 p.c. From the information presented below, the reader will be able to make further analyses, according to the particular phase of the subject in which he may be interested.

Section 17.—Annual Estimates of Population.

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death, and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, with 4,000 miles of common boundary line with the United States, crossed in both directions every day by many thousands of people. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or decennial intercensal period. In the case of Canada annual figures of population

were purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis which takes into consideration collateral data back to 1867, and the resulting figures are believed to state the populations at intercensal periods more accurately than any published prior to 1931.

The new method upon which calculations are based was described at pp. 108-109 of the 1932 Year Book.*

24.—Estimates of the Population of Canada, by Provinces, intercensal years, 1900-37.

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figure. Figures for 1937-99 will be found at p. 141 of the 1936 Year Book.

Section 18.—Area and Population of the British Empire.

Statistics of the areas and populations of the territories included in the British Empire in 1931, together with comparative figures of populations for 1921 and 1911, are given in a table on p. 165 of the 1934-35 Year Book.

Section 19.—Area and Population of the World.

Statistics showing the areas and the populations of the various continents, and details of each country, as in 1931, are given in a table on pp. 168-169 of the 1934-35 Year Book.

* The table of estimates and the description of the method upon which calculations are based are the work of M. C. MacLenn, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

CHAPTER V.—VITAL STATISTICS.*

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages, and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.† The system of registration by clergy was continued after the cession of the country to the British, and was extended to the newly-formed Protestant congregations of Lower Canada by an Act of 1795, but the registration, particularly of births, among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. An early attempt was made to remedy the situation through the census by including a schedule requesting births and deaths for the preceding year, but the efforts made to secure records of births and deaths at the Censuses of 1851 and 1861 produced most unsatisfactory results. Nevertheless, in spite of the inherent unsoundness of securing, at a point of time in a decennial census, a record of births and deaths occurring over a considerable period of time, this method was followed down to 1911, when the obviously untrustworthy character of the results led to the discarding of the data obtained at the inquiry.

In English-speaking Canada, the earlier scheme of registration of baptisms, burials, and marriages by the clergy was succeeded after Confederation by Acts for the enforcement of registration of births, marriages, and deaths, with the civil authorities. Such Acts were passed in Nova Scotia in 1864, in Ontario in 1869, in British Columbia in 1872, in Manitoba in 1881, in New Brunswick in 1887, and in Prince Edward Island in 1906. The provinces of Saskatchewan and Alberta were not established until 1905 and, until provincial Acts were passed after this date, civil registration in these provinces was governed by ordinances for the Northwest Territories, the first of which was passed in 1888.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax, and Saint John. By 1891 the list had grown to 25, at a time when, in most of the provinces, the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling, and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

The 1912 Commission on Official Statistics, recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with

* This chapter has been revised by W. R. Tracey, B.A., Chief, Vital Statistics, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

† For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details, by years, of this movement of population, see Vol. V of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements'. Yet, prior to 1920, it was impossible to compile any satisfactory series of vital statistics figures for Canada as a whole. Among the obstacles to such a national compilation were the inequalities of registration between the provinces, the lack of uniformity in classification and in the method of presentation, the omission in some cases of important data, the choice in some cases of the fiscal instead of the calendar year as the unit of time, and the fact that for some of the provinces within comparatively recent years the series of publications was broken, while for New Brunswick no provincial vital statistics at all were published from 1895 until 1920.

Co-operation was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when final discussions took place.

In 1919, as a result of conference, a plan was devised whereby the Bureau of Statistics and the Registrar General's office in each province would co-operate in producing national vital statistics for the Dominion. Under this national system, while registration of births, marriages, and deaths, is carried out as heretofore by the provincial authorities, the legislation of each province conforms in its essentials to a model bill, prepared by the Dominion Bureau of Statistics, one of the features of which was compulsory registration. The Bureau of Statistics undertakes compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926 to 1935, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician, with the exception of the report for 1931, which is out of print.

Two important considerations should be borne in mind by the student who uses either the tables which follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not as yet universally carried out. Secondly, the very considerable differences in the age and sex distribution of the population in different provinces make comparisons of crude births rates and crude death rates, as among the provinces, unfair and misleading. All rates in this chapter have been recalculated on the basis of the revised estimates of population given on p. 155.

Yukon and Northwest Territories.—The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete, the details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these territories contain

less than 1/700th of the population of Canada, their vital statistics are a negligible factor in the total. Births, marriages, and deaths in Yukon and the Northwest Territories, for the years 1924-36, are summarized in the statement herewith:—

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES, 1924-36.

¹ Revised since the publication of the 1937 Year Book.

² Preliminary figures.

The vital statistics of the provinces are taken up in the following order: births, marriages, deaths, and finally natural increase.

Section 1.—Births.

Throughout almost the whole of the civilized world the birth rate has, in the past generation, been on the decline, though the consequent reduction in the rate of natural increase has been partly offset by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35.4 per 1,000 population for the average of the decennium 1871-80, 32.5 in 1881-90, and 29.9 in 1891-1900. In 1913 the birth rate was 24.1, and, though it rose to 25.5 in 1920, it has fallen quite rapidly, with minor fluctuations since then to 14.7 in 1935.

Similarly, in France the crude birth rate declined from an average of 25.4 per 1,000 population in the 1870's, 23.9 in the 1880's and 22.2 in the 1890's to 21.4 in 1920, 16.1 in 1934, and 15.2 in 1935. In Germany, again, the crude birth rate was 39.1 in the 1870's, 36.8 in the 1880's, 36.1 in the 1890's, 25.9 in 1920, 17.6 in 1930, and 14.7 in 1933. Since then the rate has recovered to 18.9 in 1935.

In Canada the crude birth rate still stands at a comparatively high figure, being 20.0 per 1,000 in 1936. This, however, is largely due to the influence of Quebec, where the rate, although declining, stood at 24.3 per 1,000 in 1936, as compared with 16.9 per 1,000 in Ontario. In the other provinces the figures varied from a low of 14.1 in British Columbia to a high of 24.2 in New Brunswick.

Birth statistics are given by sex in Table 1, p. 159. Table 2 gives the number of live births in cities and towns of 10,000 population or over for the years 1932 to 1936, inclusive. For some years previous to 1930 there was a definite tendency for such births to increase, but the figures given indicate an opposite trend since that year.

Sex of Live Births.—Table 1 shows the number and proportion of live male and female births reported for each province of Canada during the calendar years 1934, 1935, and 1936, with averages for the five-year periods 1921-25, 1926-30, and 1931-35. The figures for Quebec commence only with the year 1926, when that

province entered the registration area, and the totals for Canada are limited in the same manner in consequence. Every province shows an excess of male births for the years or averages shown in the table. The table shows that among every 1,000 born in 1936 in the whole of Canada, 514 were males and 486 females. In other words, there were 1,058 males born to every 1,000 females.

1.—Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1934-36, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For corresponding figures for single years 1921-25, see p. 145 of the Canada Year Book for 1927-28, for those for 1926-30, p. 156 of the Canada Year Book for 1933, and those for 1931-35, p. 156 of the 1936 Year Book.

¹ Census of 1936.

Nativity of Mothers.—Table 3 shows, by provinces, the percentages of legitimate children born alive to Canadian-born, British-born, and foreign-born mothers, respectively, for the years 1934, 1935, and 1936. The influence of the limited immigration in recent years is reflected in the figures. In the Prairie Provinces of Manitoba, Saskatchewan, and Alberta, where the percentages born to foreign-born mothers in 1933 were 25.9, 36.3, and 40.4, respectively, they were 20.4, 28.6, and 32.0, respectively, in 1936. Thus more and more of the children of the West are coming within the class of third generation Canadian.

¹ Exclusive of the Territories.

Fertility Rates.—The crude birth rate of a young country is subject to influences which vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition. For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age-groups. Such rates are commonly known as fertility rates. At pp. 150-152 of the 1936 Year Book specific fertility rates of married women between the ages of 15 and 49 years were given, by provinces, for 1921, 1922, and 1930-32. Such statistics will not again be compiled until 1941 census data are available, and the interested reader is referred to that table for this information.

Multiple Births in Canada.—During the eleven-year period 1926-36, out of a total of 2,591,395, recorded confinements, 31,316 or 1 in 82.7 were multiple confinements. Of these 31,000 were twin and 314 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. The remaining multiple confinement resulted in the birth of the Dionne quintuplets (May 28, 1934).

Table 4 shows the incidence of multiple births in each year from 1926 to 1936. In 1936 one in every 86 confinements was a twin confinement, a proportion which is fairly representative for the other years as well. There were only 31 triplet confinements in 1936. Of the children born alive or dead one in every 43 was the product of a multiple confinement. For children born alive the proportion was one in 44 and for children stillborn one in 21. In the multiple confinements stillborn children formed 5.6 p.c. of the total births as against 2.7 p.c. in single confinements.

4.—Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1926-36.

¹ Including 4 females born alive in a quadruplet confinement.
all females, born alive.

² Including Dionne quintuplets.

Ages of Parents.—Table 5 shows the age distribution of married fathers and mothers in 1926 (the first year for which the figures are available for the whole of Canada) and for the years 1933-35. The fathers and mothers in each of these years are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each year into ten equal groups.

In 1935 one-quarter of the married fathers were under 27.99 years of age, one-half under 32.62 years and three-quarters under 38.56 years. One-quarter of the married mothers were under 24.12 years of age, one-half under 28.41 years and three-quarters under 33.71 years. Nine-tenths of the fathers were under 44.22 years and nine-tenths of the mothers under 38.36 years. It will be noted that in every case, except in the ninth decile for fathers, the 1926 figure is appreciably greater than that for 1935. In other words, parents, generally speaking, are somewhat younger than in 1926, although for brief intervening periods the trend has been reversed.

5.—Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, 1933-35.

Position in Array, by Age.	Fathers.				Mothers.

Birthplaces of Parents.—Table 6 classifies the children born in 1935 and 1936 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian born will be the offspring of Canadian-born, British-born or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. Between 1926 and 1936 the percentage of births for which both parents were born in Canada rose from 61.4 in 1926 to 66.4 and 67.8 for 1935 and 1936, respectively.

6.—Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1935 and 1936.

Country of Birth of Parents.	Numbers of Births with Father, Mother, or Both Parents Born in Specified Country.			Percentages of Births with Father, Mother, or Both Parents Born in Specified Country.

¹ Less than one-tenth of one per cent.² Including "Galician" and "Bukovinian".³ This

figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers are of different origins.

⁴ This excludes the percentage of "mixed parentage", i.e., parents not of the same origin.

Illegitimacy.—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries. The steady increase which is noticeable in recent years is probably due, in some measure, to more complete data.

Out of 221,451 live births in the nine provinces of Canada in 1935, 8,344, or 3.77 p.c., were returned as the issue of unmarried mothers. Figures for 1936 show a total of 220,371 live births, of which 8,633, or 3.92 p.c., were returned as the issue of unmarried mothers. Out of this number, 4,492 were males and 4,141 females—a ratio of 1,085 males to every 1,000 females, as compared with 1,069 males per 1,000 females in 1935, and a general 1936 rate for all live births of 1,058 males to 1,000 females. (See Table 8.)

8.—Numbers of Illegitimate Births, Classified by Age of Mother, by Provinces, 1936, Percentages to Total Live Births, and Totals of Illegitimate Births, by Sex, 1934, 1935 and 1936, with Averages or Totals, 1926-36.

Stillbirths.—Statistics of the number of children born dead in 1936 are shown below for Canada, according to the status and age of the mother. Stillbirths to unmarried mothers were 3.7 p.c. of total illegitimate births in 1936, whereas total stillbirths were only 2.8 p.c. of total births in the same year.

9.—Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1936, with Averages or Totals, 1926-36, and Ratios to Totals, 1934, 1935 and 1936.

Section 2.—Marriages and Divorces.

Subsection 1.—Marriages.

The marriage rate in modern countries of the western world is appreciably influenced by the general level of prosperity prevailing. Marriages in such English-speaking countries, for instance, as the United Kingdom, the United States, Canada, and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone the event. Thus an examination of the figures for individual years over the past decade clearly shows that marriages reached a peak in 1929 after which the recession was steady and marked until 1932; for 1933 there was an improvement, though of little more than 2 p.c. over 1932, for 1934 a further improvement of over 14 p.c. was recorded, and the improvement continued in 1935 and 1936. This general trend for Canada as a whole was followed in the figures for each province, although in the cases of Prince Edward Island and Alberta the large increases in 1934 were not held in the following year.

Summary statistics of marriages and marriage rates, 1934-36, with averages for 1921-25, 1926-30, and 1931-35, are given in Table 13, p. 170 and in Table 32, p. 191.

Age at Marriage.—The average age of all bridegrooms in the Dominion in 1935 was 29.0 years and that of all brides 25.0 years. The average excess of the bridegroom's age was thus 4.0 years. It may be noted in Table 11 that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups, grooms under 20 being 0.4 years younger than the brides, while the excess of the average bridegroom's age was 1.5 years in the group 20-24, and steadily increased for each quinquennial age group until it was 11.3 years for the bridegrooms 50 years or over in 1935. On the other hand, when the parties are grouped by the age of the bride, the same regularity is not shown. In the case of brides in the age groups 25-29 years and 30-34 years, the bridegrooms approximate most closely in age to their brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at first marriage. Out of each 1,000 bridegrooms in 1936, 930 were bachelors, 60 widowers, 11 divorced men; out of each 1,000 brides, 954 were spinsters, 37 widows, 9 divorced women. The first year in which as many as 1 p.c. of those marrying had previously been divorced was 1928. The comparison between the figures of divorces granted, as shown in Table 15 of this chapter, and the number of divorced persons re-married is of some interest.

Thus 1,526 divorces were granted in 1936, while 851 divorced males and 727 divorced females married again. This, of course, does not mean that these were the same persons. Table 12 gives the average ages of brides and grooms by provinces.

Nativity of Brides and Bridegrooms.—The majority of marriages contracted in the western provinces in past years were between persons born outside Canada. This condition, however, is being quickly changed and such percentages in all the western provinces show a general reduction over the past few years. (See Table 13.) Both Canadian-born brides and bridegrooms are now in the majority in each province, and in the Maritime Provinces and Quebec they show a marked predominance. Taking Canada as a whole, nearly 79 p.c. of all grooms and over 86 p.c. of all brides in 1936 were born in Canada; these are the highest percentages shown for the period covered by the statistics.

13.—Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1934, 1935, and 1936, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For figures for single years 1921-25, see the 1929 Year Book, p. 166; for 1926-30, the 1933 Year Book, pp. 163-164; and for 1931-35, the 1936 Year Book, p. 164.

¹ In the United States 1932 is the latest year for which the rate has been computed.

Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

One effect of the War was to increase divorce. The causes may be found in the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces, have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes tended to increase the number of divorces granted in Canada, which grew steadily from 114 in 1918 to 873 in 1930. The numbers

are those of final decrees, which alone really constitute divorces. In 1931 the number decreased to 692, this being largely due to the transfer of jurisdiction in Ontario divorces from the Parliament of Canada to the Supreme Court of the province, with the consequent delay between the granting of the decree *nisi* and the decree absolute. Since 1931 there has been an increase of 170 p.c. in the total number of divorces granted. All provinces except Nova Scotia show increases over that year. The statistics of divorces granted in the years 1918 to 1937, inclusive, will be found in Table 15. The figures in this table have been revised since the publication of the 1937 Year Book, as in some cases those of Dominion divorces for the earlier years included annulments, which are not included in the provincial figures. A redistribution as between provinces has also been made, the present figures being according to the domicile of the husband, whereas those previously published were arranged according to the residence of the petitioner.*

15.—Statistics of Divorces Granted in Canada, 1918-37.

NOTE.—In consequence of a decision of the British Privy Council, divorces in Manitoba, Saskatchewan, and Alberta have, subsequently to 1918, been granted by the courts of these provinces. The statistics shown here have been revised since the publication of the 1937 Year Book. For divorces in each year prior to 1918, see the 1921 Year Book, p. 825.

Section 3.—Deaths.

Within the past century, and more especially within the past generation, there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical

* The General Statistics Branch of the Dominion Bureau of Statistics publishes a bulletin on Divorce showing the sex of applicants and the number of persons re-married, together with comparisons with certain other countries. Application for this bulletin should be made to the Dominion Statistician.

science, how far to better sanitation, and how far to the improvement in the general conditions of living, as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been kept with great accuracy for the whole nation ever since 1750. There, the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to 14.3 in the decade 1911-20 and to 11.7 in 1935.

Similarly, in England and Wales, the crude death rate, which was 22.5 per 1,000 in the 60's, 21.4 in the 70's and 18.2 in the 90's of the past century, declined to 15.4 in the first decade of the present century and 12.1 in the third; it was 11.7 in 1935. In Scotland, again, the average rate was 22.1 in the '60's, 21.8 in the '70's, 18.6 in the '90's, 13.9 in 1921-25, 13.6 in 1926-30, and 13.2 in 1935.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15.3 per 1,000, owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility, and it remains generally true that from decade to decade there is a decline in the crude death rates of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12.4 per 1,000 for that year, in the eight provinces then included in the registration area, was substantially higher than in any subsequent year. A decided improvement is shown in the deaths and death rate of Quebec for the years 1933-36. This has been in evidence ever since 1926, but latterly Quebec has shown a lower rate than any of the provinces farther east.

Subsection 1.—General Mortality.

Summary statistics of total deaths and crude death rates in recent years are given in Table 32, p. 191, for Canada, by provinces. The absolute number of deaths as well as the crude death rate was higher for 1935 and 1936. In fact total deaths were greater than they have been since 1930, but the death rate was increased very little over the 1933 level although the advantage gained in 1934 was lost. A rising trend in the western provinces, where rates in the early '30's were unusually low, largely accounted for the increase.

Age Distribution of Decedents.—The numbers of males and females dying in the nine provinces in 1935 and 1936 are given by single years of age up to 5 and by quinquennial age groups thereafter in Table 16, together with the percentage of deaths occurring in each group in each of these years.

The quartile and decile ages of decedents for the years 1926, 1934, and 1935 are given for each sex and for the two sexes combined in Table 17. The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. It is shown very definitely that the average ages of decedents have been increasing steadily. The method of construction and interpretation of this table is given on p. 163 in connection with a similar one showing quartile and decile ages of married fathers and mothers.

Standardized Death Rates.—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people make the crude death rate no true test of the relative expectation of life in such communities. Where the age constitution of a particular group is particularly favourable to low mortality, for example among the selected lives of soldiers in peace time, the crude rate will naturally be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups the effects of differences in age constitution between these communities are eliminated, but by a process which does not bring together and express completely as a single figure the facts of the situation. It has therefore been considered

desirable to adopt a particular community as a standard, and to find what the death rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The "standard" population chosen for this purpose in England and Wales and the United States is the "standard million", based on the age and sex distribution per million of the population of England and Wales at the Census of 1901. That age and sex distribution was as follows:—

Age Group.	Both Sexes.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5-9 years.....	107,209	53,462	53,747
10-14 years.....	102,735	51,379	51,365
15-19 years.....	99,796	49,420	50,376
20-24 years.....	95,946	45,273	50,673
25-34 years.....	161,579	76,425	85,154
35-44 years.....	122,849	59,394	63,455
45-54 years.....	89,232	42,924	46,308
55-64 years.....	59,741	27,913	31,828
65-74 years.....	33,080	14,691	18,389
75 years or over.....	13,581	5,632	7,949

Regarding the standard million of England and Wales the Registrar General says: "As the population of this country in 1901 included relatively few infants and old people it forms a standard exceptionally favourable to low mortality". The relative fewness of old people in the population is presumably due to the great improvement in mortality during the 19th century; the relative fewness of infants, to the marked reduction of the birth rate between the 1870's and the end of the century.

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, for the years 1921-36 and to the population of Quebec for the years 1926-36 in Table 18. Of the rates there given, those for 1921 and 1922 have been calculated directly, the proportion of the population in each sex and age group according to the Census of 1921 being assumed to hold true for 1922 also; similarly the rates for 1930, 1931, and 1932 have been calculated directly from the proportions shown in each sex and age group at the Census of 1931. For the intervening years, 1923-29, for which estimates of total population but not of population by age groups were available, the following method was adopted. The proportions which the standardized rates of 1921 and 1922 (correct to three decimal places) bore to the crude were averaged, similarly those of 1930 and 1931, and the change was assumed to have taken place in an arithmetical progression during the intervening seven years. Quebec not having been in the registration area in the year 1921, a standardized rate was not available for that year or for 1922, but as the proportion of the standardized rate to the crude depends primarily on the sex and age distribution of the population, and as this distribution was known for 1921 and 1931, and the actual proportion of standardized rate to crude rate for 1931, it was possible to compute a theoretical proportion for 1921. The same method was followed for the total of the nine provinces. The rates for 1933-36 have been computed on the assumption that the arithmetical progression, to which reference has been made, continued over those years in all provinces with the exception of the Prairie Provinces, for which the data of the 1936 Census were used.

In all of the eight provinces for which 1921 figures are given the proportion of the standardized rate to the crude was higher in 1921 than in 1931; in other words, the age distribution had become more unfavourable in the later year. In the Maritime Provinces, Quebec, and Ontario the process of "standardizing" the death rate results in a reduced rate. This is particularly true of Prince Edward Island, which has the largest proportion of aged persons of all Canadian provinces. In the western provinces, on the other hand, the standardized rates are higher than the crude.

Causes of Death.—Nearly 87 p.c. of deaths recorded in Canada in the years 1932 to 1936 were due to the 32 specific causes named in Tables 19 and 20. In these tables the groupings are in accordance with the revision of the International List in 1929, which was first applied to Canadian mortality statistics for the year 1931. In the chart which accompanies the tables, the main object has been to attain the greatest degree of comparability possible over the whole period 1926-36. For this purpose it has been necessary to depart somewhat from the grouping of Tables 19 and 20.

In any analysis of the relative importance of the causes of death it must be remembered that the Canadian population is an ageing one—that is, the average age is being advanced year by year due to the long-term influences of a falling birth rate, falling specific death rates, and very limited immigration. Since 1913 immigration has been very much curtailed and its effect on age distribution of population is illustrated by the movement of what may be termed the "immigration hump" (that increment of population due to extensive immigration before 1913). This is gradually passing up the age scale. Further, due to the improvements in sanitation and health conditions generally, the average age at which death takes place has been pushed gradually higher. All these factors tend to thrust those causes which are commonly associated with advancing years to the fore.

Some of the effects of the ageing of the population can be observed by the comparison of crude and standardized mortality rates for individual causes of death in 1921 and 1931, since standardized rates are calculated in order to eliminate the effects of changes in sex and age composition of the population. Cancer provides a pronounced example of the ageing effect. The crude rate for cancer was 75.3 in 1921 and in 1931 it was 95.8. The increase was thus 27 p.c. The standardized rate, however, was 72.7 in 1921 and 81.4 in 1931, an increase of only 12 p.c. It may be stated, therefore, that roughly more than half of the increase in the crude cancer death rate between 1921 and 1931 was accounted for by the ageing of the population. Nevertheless, cancer shows a persistent increase over the years in spite of all efforts to control its spread. Diseases of the heart and arteries are two other important causes which affect people of advancing years and which have shown substantial increases. In the case of diseases of the heart, the crude rate showed an increase of 25.5 p.c. between 1921 and 1931, but, again, the standardized rate increased by only 9 p.c. The crude rate for diseases of the arteries advanced by no less than 71 p.c. and the standardized by 50 p.c. over the decade. For nephritis, a disease which falls in the same general class, the increase in the crude rate was 28.5 p.c. and in the standardized, 12.5 p.c. Pneumonia is particularly fatal among those of advanced years and among infants; the same influences as have been mentioned have, no doubt, affected the figures for this disease.

¹ The numbers given in this column refer to the International List of Causes of Death, as revised in 1929 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate, or abridged form, is accepted in almost all civilized countries.

DEATH RATES PER 100,000 POPULATION IN CANADA 1926-1936

(EXCLUSIVE OF THE NORTHWEST TERRITORIES AND YUKON)

EIGHT IMPORTANT CAUSES OF DEATH (RATES PER 100,000)

The rubrics (of the International List) included in the indicated groups have been selected to preserve the greatest degree of continuity possible. For this purpose it has been necessary to depart in these cases (indicated by the asterisks) from the groupings in Tables 19 and 20. In all other cases the classification is the same as shown in the tables.

20.—Death Rates per 100,000 Population in Canada, by Principal Causes, 1932-35.

For footnote, see end of Table 19.

Deaths in Canadian Cities.—Table 21 gives the numbers of deaths in Canadian cities and towns of 10,000 population and over for the years 1932-36, together with averages, 1926-30 and 1931-35. Deaths in Canada as a whole declined steadily for the period 1931-34, but for 1935 and 1936 there were substantial increases. The figure for the latter year was 107,050, or almost 1,000 more than for 1931. The total deaths of the 67 cities listed in Table 21 show a slightly increased proportion to population for the five-year period 1931-35 as compared with 1926-30. For 1932, which marked the depth of the economic depression, the deaths in these cities increased, thus going against the general trend for Canada; for other years, however, the general trend was followed.

¹ Includes East Windsor, Sandwich, and Walkerville.[†] Census of 1936.

Comparative Crude Death Rates of Different Countries.—In Table 22 will be found a comparative statement of the crude death rates of various countries for the latest available year. Those of the provinces of Canada are also given for comparison. The Netherlands, New Zealand, Australia, and Canada, are the only countries with death rates under 10.0 per 1,000 of population. The low death rates in the Prairie Provinces are in all three cases due in part to a favourable age distribution of population.

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, the Dominion, provincial, and municipal health authorities have all taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. In the sixteen years for which the figures are available there is evident a very considerable decline in infantile mortality. In 1921 the infant death rate for Canada (using figures from provincial sources for Quebec) was 102 per 1,000 live births. This rate had been reduced to 66 in 1936. Table 23 gives figures for the whole of Canada for the years 1931 to 1936 and averages for the five-year periods 1921-25, 1926-30, and 1931-35. The infantile mortality in Quebec still exceeds that in any other province, although a study of the rates shows that steady improvement has been made in the ten-year period during which the province has been included in the registration area. In Canada as a whole over 9,000 infant lives were preserved in 1936 which, under conditions prevailing in 1926, would probably have been lost.

23.—Infantile Mortality, by Provinces, together with the Rates per 1,000 Live Births, 1931-36, with Averages for 1921-25, 1926-30, and 1931-35.

¹ Exclusive of the Territories.

² Quebec was not included in the registration area prior to 1926.

Infantile Mortality by Causes of Death.—Twenty-one principal causes of death accounted in the years 1926 to 1936 for between 91 and 92 p.c. of the infantile mortality experienced in the Dominion, as is shown in Table 24. It is noteworthy that four causes present at birth, *viz.*, premature birth, injury at birth, congenital debility and congenital malformations, accounted for over 46 p.c. of the infant deaths of 1936. This percentage shows a definite increase in the years covered. In 1926 it was 41.4 and in 1930 42.3, and since the decline in rate of infant deaths has decreased by nearly 39 p.c. in the interval since 1926, great improvement in the post-natal care of infants is indicated. In the years 1935 and 1936, 49.2 p.c. and 50.7 p.c., respectively, of all infants who died were less than one month old, and 35.3 p.c., and 37.2 p.c., respectively, were less than one week old, as is shown in Table 25.

24.—Infantile Mortality in Canada by Principal Causes of Death, 1926, 1935-36.

NOTE.—Figures for the former registration area for the single years 1921 to 1924 will be found at pp. 182-183 of the 1927-28 Year Book, and for 1925 to 1927 at pp. 177-178 of the 1929 Year Book. Figures for the whole of Canada for the years 1927 and 1928 will be found at pp. 138-140 of the 1933 Year Book, for 1929 and 1930 at pp. 177-178 of the 1933 Year Book, for 1931, 1932, and 1933 at pp. 202-203 of the 1934-35 Year Book, and for 1934 at pp. 176-177 of the 1935 Year Book.

¹ Exclusive of the Territories.

Infantile Mortality in Canadian Cities and Towns.—Table 26 shows for the cities and towns of 10,000 population and over, the numbers of infant deaths and the death rates per 1,000 live births for the years 1934-36. But a very low rate for any particular year means little since wide fluctuations from year to year are the rule. Moreover, since maternity hospitals in many urban centres draw patients from surrounding districts, the rates based on place of occurrence, shown in Table 26, are often quite different from rates based on place of residence. This is illustrated particularly in the case of Westmount, where the number of infant deaths under one year by place of occurrence in 1936 was 29 compared with 9 by place of residence. Vancouver, B.C., has a splendid record among the large cities over the three years. Three Rivers, Westmount, Sorel, Glace Bay, Joliette, and Quebec city have all rates of over 100 for 1936, and most of them have high rates over the three-year period. Apart from Vancouver, already mentioned, among the large cities Montreal has recorded steady improvement over the period and Winnipeg and Toronto have very low rates and good records.

The infantile mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 51 in 1936, that for Winnipeg from 78 to 39, for Vancouver from 56 to 33, for Hamilton from 88 to 42, for Ottawa from 130 to 88, for London from 92 to 55, for Edmonton from 89 to 41, for Halifax from 135 to 59, for Saint John from 147 to 69. Altogether, in the 13 cities of 40,000 population and over in the former registration area of Canada, there were 41,923 live births in 1921

and 3,833 infant deaths, being a rate of 91 per 1,000 live births. In 1936 in these same cities there were 35,616 live births but only 1,795 infant deaths, or a rate of 50 per 1,000 live births.

Infantile Mortality in Various Countries.—The rate of infantile mortality to live births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1935 the rate of infantile mortality was only 32 per 1,000 live births as compared with 68 in 1905. The Netherlands, Norway, Sweden, and Switzerland, with rates of 40, 44, 47 and 48 in their latest available year (1935) are the lowest among European countries.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 live births in 1905 to 57 in 1935, while the rate in Germany has declined from 196 in 1904 to 69 in 1935. In the Netherlands, again, the rate has declined from 131 per 1,000 live births in 1905 to 40 in 1935. Statistics are given in Table 27 by leading countries and by provinces.

Infantile Mortality in Certain Cities of the World.—It is one of the greatest triumphs of our time that city life is in our day, if not as healthy, yet not necessarily more dangerous to human, especially to infant, life than the average living conditions in the country as a whole.

To give particular examples, the rate of infantile mortality in New York was 52 per 1,000 live births in 1934, as against a rate of 60 per 1,000 for the birth registration area of the United States. In 1935 Berlin had an infantile mortality rate of 63 per 1,000 live births, as compared with 69 for Germany. On the other hand, Paris had a rate of 76 in 1934, compared with a rate of 69 for France in the same year, and in 1935, London a rate of 58 compared with 57 for England and Wales.

In Canada, Montreal had, in 1935, an infantile mortality of 87 per 1,000 live births as compared with 92 for the province of Quebec. Toronto had, in 1935, an infantile mortality rate of 51 per 1,000 live births as against 56 for the province

of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces. Over a number of years both Vancouver and Victoria have shown two of the lowest infantile mortality rates in the world.

Maternal Mortality.—Of cognate interest with infantile mortality is the maternal mortality arising out of pregnancy and child-birth. This maternal mortality is shown by Table 29 to be at its lowest among mothers under twenty-five years of age. The mortality among mothers of different ages per 1,000 live births is shown for the years 1934-36; averages are also shown for the years 1926-30 and 1931-35. The maternal mortality is shown by provinces and age groups in Table 30 and by causes of death in Table 31.

29.—Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1934-36, and Five-Year Averages for 1926-30 and 1931-35.

NOTE.—Comparable figures for 1926-32 will be found at p. 208 of the 1934-35 Year Book, and for 1933 at p. 186 of the 1937 Year Book.

¹ Exclusive of Yukon and the Northwest Territories.

As compared with the previous year, the number of maternal deaths shows an increase of 140, or 13 p.c., but the decrease from 1930 is over 12 p.c. Decreases are shown for Nova Scotia and British Columbia, but elsewhere increases are recorded as compared with 1935. By far the most serious causes of maternal mortality are puerperal septicæmia, and puerperal albuminuria and eclampsia, and deaths from these causes increased from 605 in 1935 to 687 in 1936, or by 13.6 p.c.

Section 4.—Natural Increase.

Natural increase is a resultant of births and deaths, and its treatment is felt to come, logically, at this place rather than at the beginning of the chapter, as in former editions of the Year Book.

Summary statistics of the births, deaths, and natural increase (births minus deaths) per 1,000 of population are given for the years 1921 to 1936, by provinces, in Table 32. Statistics of marriages are also included in this table for convenience. The province of Quebec is regarded as having one of the highest rates of natural increase per 1,000 population of any civilized area. The rate was 17.1 in 1931 and, while it has been appreciably reduced in line with common experience, it stood at 14.0 in 1936. Saskatchewan has usually approached Quebec in the matter of natural increase and for the years 1934 and 1935 the rates for this prairie province exceeded those for Quebec. New Brunswick and Alberta follow in the order given. In the case of the two western provinces the high rates of natural increase are due to their relatively younger populations and lower crude death rates, but in the case of New Brunswick the condition of an abnormally high birth rate combined with a

high death rate exists. The high rates for these provinces brought the averages for Canada up to 11.1 in 1934, 10.6 in 1935, and 10.3 in 1936, in spite of the fact that the rate for British Columbia, which has always been low, was only 4.5 in 1936. The rate of natural increase in 1935 was 13.7 per 1,000 in the Union of South Africa (whites), 7.9 in New Zealand, 7.1 in Australia, 5.6 in the Irish Free State, 4.8 in Northern Ireland, 4.6 in Scotland, and 3.0 in England and Wales, so that Canada compares quite favourably with most other British countries.

The rates of natural increase per 1,000 of the mean population for other countries in the latest years are as follows, the figures being for 1935: Netherlands, 11.5; Japan, 14.8; Spain, 9.9; Italy, 9.4; Denmark, 6.6; Germany, 7.1; United States, 6.0; Finland, 6.5; Switzerland, 3.9; Norway, 4.0; Belgium, 2.6; Sweden, 2.1; France, -0.5.

BIRTH RATES, DEATH RATES AND RATES OF NATURAL INCREASE

IN CANADA
1926-1936
RATES PER 1000 POPULATION
(Exclusive of the Northwest Territories and Yukon)

During recent years the rate of natural increase of the population of Canada has declined. In 1921 the rate was 17.8; it declined to 13.3 in 1926 and to 12.2 in 1929. After 1929 there was a temporary improvement but, as Table 32 shows, the rates for 1934, 1935, and 1936—11.1, 10.6 and 10.3, respectively—continued the downward trend. Among the provinces the trends generally follow that of Canada as a whole, except in the Maritime Provinces, for each of which the trend is not so regularly downward and has, in fact, been upward since 1934. Quebec shows the greatest improvement in death rate for the period since 1926. The birth rate is declining here as elsewhere and the rate of natural increase has shown a definitely downward trend, although not so markedly as that of Saskatchewan.

Statistics of natural increase in cities and towns of 10,000 population and over are given for the period 1926-36 in Table 33, but these are not worked out as rates per thousand of population, though the census populations in 1931, which are also given, furnish some guide to such rates.

22.—Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1931-36, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For other than census years birth, marriage, and death rates are calculated on estimated population (see p. 155). Figures for individual years 1921-25 will be found at p. 190 of the 1927-28 Year Book; for 1926-30 at p. 150 of the 1933 Year Book; for 1931-32 at p. 147 of the 1936 edition; and for 1933 at p. 160 of the 1937 Year Book.

Province.	Births	Birth Rate per 1,000 Population.	Marriages.	Marriage Rate per 1,000 Population.	Deaths.	Death Rate per 1,000 Population.	Excess of Births over Deaths.	Rate of Natural Increase per 1,000 Population.

¹ Census of 1936.

Natural Increase, by Sex.—In Table 34 the relationship of births to deaths is shown by sex from 1926 to 1936 for Canada and for 1936 by provinces. In spite of higher male births, the natural increase is shown to be lower for males than females due to the higher mortality among the former.

CHAPTER VI.—IMMIGRATION AND COLONIZATION.*

While the great majority of French Canadians can trace their descent to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century, a great English-speaking migration entered the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter, immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised, at its commencement, to be even greater than during the first. In its first three years no fewer than 1,084,934 persons entered Canada for purposes of settlement, but the Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in the United Kingdom and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only about 3,000, as compared with 150,000 in 1913; immigrant arrivals from Continental Europe numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the War, immigration to the Dominion has never approached that of the pre-war period.

Section 1.—Statistics of Immigration.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. Indeed the depression which began about the close of 1929, with its accompanying unemployment and unsold surplus of farm products, raised the question whether it was desirable that Canada should accept immigrants in any considerable number. Therefore, the Government, on Aug. 14, 1930, passed an Order in Council whereby immigrants, except Britishers coming from the Mother Country or self-governing Dominions, and United States citizens coming from the United States, were allowed to come in only if they belonged to one of two classes—(a) wives and unmarried children under eighteen years of age, joining family heads established in Canada and in a position to look after their dependants; (b) agriculturists with sufficient money to begin farming in Canada. This limitation applies to the whole continent of Europe as well as to many other countries. Regulations affecting immigration from the British Isles, the British Dominions or the United States have not been

* Revised under the direction of F. C. Blair, Director of Immigration, Department of Mines and Resources, Ottawa.

changed but a policy of no solicitation has been rigidly adopted. In harmony with this policy the Department of Immigration and Colonization, during 1931, closed all its Canadian Government Information Bureaus in the United States and reduced its representation in the British Isles.

For many years the Immigration Regulations have contained a general provision that immigrants coming to Canada must have sufficient funds to look after themselves until employment is secured. Naturally, when employment is readily available a sum would be considered sufficient which would be insufficient in periods of unemployment, and the enforcement of this regulation is an important factor in reducing immigration at the present time. An Order in Council (Aug. 7, 1929), prohibiting the landing in Canada of any immigrant coming under contract or agreement, expressed or implied, to perform labour or service of any kind in Canada, is also in effect but this prohibition does not apply to farmers, farm labourers, or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada.

The number of immigrant settlers in Canada is shown by calendar years from 1852 to 1937 in Table 1, and the number of immigrant arrivals in Canada from the United Kingdom, the United States, and other countries, is given by years from 1908 in Table 2.

1.—Numbers of Immigrant Arrivals in Canada, calendar years 1852-1937.

Sex and Conjugal Condition of Immigrants.—As shown by Table 3, the 11,643 immigrants who came to Canada in the calendar year 1936 included 4,818 males and 6,825 females, males constituting only 41.4 p.c. of the total, as compared with 41.3 p.c. in 1935. Prior to 1932 males normally exceeded females, as shown on p. 213 of the 1934-35 edition of the Year Book, where figures for the fiscal years 1911-34 will be found. Similar information for the calendar years 1929-36 is given in Table 4.

2.—Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and Other Countries, calendar years 1908-37.

NOTE.—The 1936 edition of the Year Book showed, at p. 185, statistics of immigration on this basis, by calendar years from 1881 to 1900 and by fiscal years from 1901 to 1935.

Racial Origins of Immigrants.—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the duties of Canadian citizenship. Since the French are not, to any great extent, an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch, and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people who have come to Canada from these regions in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, are those who come to Canada from the Orient. On the whole, the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the calendar years 1926-36 are shown in Table 5. In the latest year the British races constituted 44 p.c. of the immigrants and the French 7 p.c.

5.—Racial Origins of Immigrants into Canada, calendar years 1926-36.

Note.—Dashes in this table indicate that no immigrants were reported under the corresponding stub items.

Nationalities of Immigrants.—In the calendar year 1936 the percentage of British subjects immigrating to Canada was 27, while that of United States citizens was 35. In 1930, when total immigration was over eight times that of the latest year, the proportions were 34 p.c. and 21 p.c., respectively. The third largest group, comprising immigrants of Polish nationality, dropped from 16 p.c. in 1930 to 13 p.c. in 1936. Table 7 shows the nationalities of immigrants for the six latest years.

Countries of Birth of Immigrants.—In Table 8 will be found the countries of birth of the immigrants into Canada in the calendar years 1931-36. The figures show that the United States with 3,591 was the birthplace of more of our 1936 immigrants than any other single country. This has been the case since 1930. In 1936 Poland came second with 1,599, England third with 1,289, and Czechoslovakia fourth with 760.

8.—Countries of Birth of Immigrants, calendar years 1931-36.

Ports of Arrival of Immigrants.—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. Of recent years there has been a tendency for a larger percentage of immigrants to arrive at the port of Halifax. This would appear to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 9.

9.—Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years 1931-36.

Destinations of Immigrants.—Table 10 shows that in the nine latest calendar years the province of Ontario continued to receive the largest number of immigrants, as has been the case since 1905. In 1929 and 1930 Manitoba was in second place, while in the seven latest years Quebec stood second as the immediate destination of new arrivals. The 1934-35 edition of the Year Book gives similar information, by fiscal years, from 1901 to 1934.

10.—Destinations of Immigrants into Canada, by Provinces, calendar years 1929-37.

Prohibited Immigrants.—The following is quoted from Section 3 of the Immigration Act.

PROHIBITED CLASSES.

"No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called 'prohibited classes':—

- (a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;
- (b) Persons afflicted with tuberculosis in any form, or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only to pass through Canada in transit to some other country: Provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment;
- (c) Immigrants who are dumb, blind, or otherwise physically defective, unless, in the opinion of a Board of Inquiry or officer acting as such, they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge or unless they belong to a family accompanying them or already in Canada and which gives security satisfactory to the Minister against such immigrants becoming a public charge;
- (d) Persons who have been convicted of, or admit having committed, any crime involving moral turpitude;
- (e) Prostitutes and women and girls coming to Canada for any immoral purpose and pimps or persons living on the avails of prostitution;
- (f) Persons who procure or attempt to bring into Canada prostitutes or women or girls for the purpose of prostitution or other immoral purpose;
- (g) Professional beggars or vagrants;
- (h) Immigrants to whom money has been given or loaned by any charitable organization for the purpose of enabling them to qualify for landing in Canada under this Act, or whose passage to Canada has been paid wholly or in part by any charitable organization, or out of public moneys, unless it is shown that the authority in writing of the Deputy Minister, or in case of persons coming from Europe, the authority in writing of the Assistant Superintendent of Immigration for Canada, in London, has been obtained for the landing in Canada of such persons, and that such authority has been acted upon within a period of sixty days thereafter;
- (i) Persons who do not fulfil, meet or comply with the conditions and requirements of any regulations which for the time being are in force and applicable to such persons under this Act;
- (j) Persons who in the opinion of the Board of Inquiry or the officer in charge at any port of entry are likely to become a public charge;
- (k) Persons of constitutional psychopathic inferiority;
- (l) Persons with chronic alcoholism;
- (m) Persons not included within any of the foregoing prohibited classes, who upon examination by a medical officer are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living;
- (n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property;
- (o) Persons who are members of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or advocating or teaching the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally of the Government of Canada or of any other organized government, because of his or their official character, or advocating or teaching the unlawful destruction of property;
- (q) Persons guilty of espionage with respect to His Majesty or any of His Majesty's allies;
- (r) Persons who have been found guilty of high treason or treason or of conspiring against His Majesty, or of assisting His Majesty's enemies in time of war, or of any similar offence against any of His Majesty's allies;
- (s) Persons who at any time within a period of ten years from the first day of August, one thousand nine hundred and fourteen, were deported from any part of His Majesty's dominions or from any allied country on account of treason or of conspiring against His Majesty, or of any similar offence in connection with the war against any of the allies of His Majesty;
- (t) On and after the first day of July, one thousand nine hundred and nineteen, in addition to the foregoing 'prohibited classes' the following persons shall also be prohibited from entering or landing in Canada: Persons over fifteen years of age, physically capable of reading, who cannot read the English or French language or some other language or dialect: Provided that any admissible person or any person heretofore or hereafter legally admitted, or any citizen of Canada, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter: for the purpose of ascertaining whether aliens can read, the immigration officer shall use slips of uniform size prepared by direction of the Minister, each containing not less than thirty and not more than forty words in ordinary use printed in plainly legible type in the language or dialect the person may designate as the one in which he desires the examination to be made, and he shall be required to read the words printed on the slip in such language or dialect; but the provisions of this subsection shall not apply to Canadian citizens and persons who have Canadian domicile, to persons in transit through Canada, or to such persons or classes of persons as may from time to time be approved by the Minister;
- (u) Members of a family (including children over as well as under 18 years of age) accompanying a person who has been rejected, unless in the opinion of the Board of Inquiry no hardship would be involved by separation of the family."

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

Table 12 shows the number of immigrants rejected upon their arrival at Canadian ports, by causes and nationalities, for the calendar years 1931-36, while Table 13 shows the number of deportations after admission, for the fiscal years 1903-25 and by single years for the fiscal years 1926-37, also by causes and nationalities.

Juvenile Immigrants.—Among the most generally acceptable immigrants of recent years were the juveniles of both sexes, many of whom had been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys were placed on farms, while the girls were placed either in town or country, but the organizations remained the guardians of the children until they had reached maturity, and, in addition, the children were subject to efficient and recurrent government inspection until each reached the age of nineteen. This inspection was under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" was applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved-society auspices. These organizations were assisted by the Oversea Settlement Agreement, which provided free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. On Sept. 23, 1931, the societies concerned were notified that the Dominion Government had decided to discontinue any further assistance of that nature.

The number of such juvenile immigrants to Canada in each year since 1901 is given in Table 14.

14.—British Juvenile Immigrants, fiscal years ended 1901-37.

NOTE.—Juvenile immigrants are, of course, included in the total number of immigrants, recorded elsewhere.

Oriental Immigration.—The immigration to Canada of Orientals is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration, by fiscal years, since the commencement of the century is given in Table 15, while Table 15A gives the same information for the calendar years for which it has been possible to compile the figures, *viz.*, 1929 to 1936.

Chinese Immigrants.—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia is thought to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were laundry workers and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion Government in 1884 to investigate Chinese immigration and this commission recommended the imposition of a head tax of \$10 upon Chinese entering Canada, together with registration and special legislation regulating the entry of Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71), providing that thereafter Chinese of the labouring class should be required, as a condition of entering Canada, to pay a head tax of \$50 each. On Jan. 1, 1901 (63-64 Vict., c. 82), this tax was increased to \$100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to \$500. This tax was paid by all Chinese immigrants except consular officers, merchants, and clergymen and their families, tourists, men of science, students and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911, to 39,587 in 1921, and 46,519 in 1931. Of this latter number, 43,051 were males and only 3,468 females. Over 58 p.c. of all the Chinese in Canada, *viz.*, 27,139 were residents of British Columbia.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38),* limits the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, to the following classes:—

- (a) Members of the diplomatic corps or other government representatives, their suites and their servants, and consuls and consular agents;
- (b) Children born in Canada of parents of Chinese origin or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- (c) Merchants as defined by such regulations as the Minister may prescribe; students coming to Canada for the purpose of attending, and while in actual attendance at, any Canadian university or college authorized by statute or charter to confer degrees.
- (d) Persons in transit through Canada.

Classes (c) and (d) are to possess passports issued by the Government of China and endorsed by a Canadian immigration officer. As a result of this legislation no Chinese were admitted to the country as immigrants in the fiscal years ended 1925, 1926, and 1927; three are shown by the above table to have been admitted in 1928, one in 1929, none in 1930, 1931 or 1932, one in 1933, two in 1934, none in 1935 or 1936, and one in 1937.

Japanese Immigrants.—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the Census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868; in 1931, 23,342—22,205 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In 1908 an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. Japanese immigration has been very restricted since 1929, only 103 Japanese immigrants having entered Canada in the fiscal year 1937.

East Indian Immigrants.—East Indian immigration to Canada, like Japanese, is shown by Table 15 to have been negligible down to 1907, when no fewer than 2,124 East Indian immigrants arrived. However, as a consequence of the operation of the Immigration Regulations, East Indian immigration has for years been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians, already permanently domiciled in other British countries, should be allowed to bring in their wives and minor children. In the ten fiscal years 1928-37 only 456 East Indians, many of them women and children, were admitted to Canada.

Expenditures on Immigration.—The sums expended by the Dominion Government on immigration in each of the fiscal years ended 1868 to 1937, inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table 17.

Emigration from Canada.—An important factor tending to offset the immigration activities of the past was a movement from Canada to the United States which attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immigrants generally, but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter

* R.S.C., 1927, c. 95.

that country. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but, until 1924, no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table 18.

Another circumstance which has in the past, occasioned a considerable movement from Canada to the United States has, no doubt, been the practice of Europeans to enter Canada and declare themselves *bona fide* immigrants, with the real intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the United States regulations *re* persons entering the United States from Canada, and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

**17.—Expenditures on Immigration in the fiscal years ended June 30, 1868-1906,
and Mar. 31, 1907-37.**

¹ Nine months.

The movement of population between the two countries now appears to be slightly towards the United States. In the U.S. fiscal year ended June 30, 1937, the total movement from Canada to that country was 17,224, made up as follows: immigrants, 11,799; U.S. citizens returning after residence in Canada, 5,211; and persons deported from Canada, 214. The movement towards Canada totalled 9,185, made up as follows: immigrants, 3,889 (of whom 2,862 were U.S. citizens); persons deported to Canada, 1,833; and persons permitted to depart voluntarily to Canada in lieu of deportation proceedings, 3,463. Canadian immigration figures for the same period show 5,347 immigrants admitted to Canada and 5,250 returning Canadians, a total of 10,597. The discrepancy between the two series is probably due to incomplete emigration statistics.

In the past five years there has also been considerable emigration from Canada to the British Isles. Table 19, taken from the *Statistical Abstract of the United Kingdom*, shows the movement of population between the United Kingdom and British North America from 1924 to 1936. Inasmuch as the movement between the British Isles and Newfoundland is negligible, the table may be taken as presenting a fair picture of immigrant and emigrant movement between Canada and the United Kingdom.

19.—Numbers of Passengers of British Nationality Changing Their Permanent Residence between the United Kingdom and British North America, calendar years 1924-36.

Section 2.—Colonization Activities.

Recent information on this subject was given at pp. 201-202 of the 1936 edition of the Year Book. To it the interested reader is referred.

CHAPTER VII.—SURVEY OF PRODUCTION.*

A gain of more than 7 p.c. in the net value of total production over the preceding year was indicated for 1935. The net value of commodities produced stood at \$2,395,000,000 against \$2,234,000,000 in the preceding year. As the level of commodity prices remained relatively steady during the interval, the gain represents considerable betterment in the volume of productive operations. The general nature of the improvement was shown by the fact that each of the nine main branches of production participated in the advance.

While the lowest point of the recent depression was reached in 1933, revival commenced in the latter part of the year and has been fairly continuous since that time. With regard to 1936, price and volume indexes indicate that a further gain in net production occurred. The index of wholesale prices averaged 3.5 p.c. higher than in 1935, while the gain in the index of industrial production was nearly 10.4 p.c., and the index of general employment recorded an advance of 4.3 p.c.

The Definition of 'Production'.—The term 'production' is used here in its popular acceptance, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electric current, manufacturing, etc.—in economic phrase, the creation of 'form utilities'. It does not include various activities which are no less productive in a broad and strictly economic sense, such as (a) transportation, refrigeration, merchandising, etc., which add the further utilities of 'place', 'time', and 'possession' to commodities already worked up into form, and (b) personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing, in economic language, the creation of 'service utilities'.

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1935, the latest year for which complete statistics of production are available, amounted to \$310,107,155, street railway gross earnings to \$40,442,320, and telephone and telegraph earnings to \$66,771,312, all of which, from a broad point of view, may be considered as production. Further, it may be noted that, according to the Census of 1931, out of 3,927,591 persons of ten years of age or over recorded as gainfully occupied, 306,273 were engaged in transportation activities, 387,315 in trade, 92,317 in finance, and 767,705 in service occupations. While 81,610 of the latter were engaged in custom and repair work, the value of which is included in the survey of production, the value of the production of the remaining 1,472,000 gainfully occupied persons in the four occupational groups just mentioned would not appear to be included to any extent in the survey of production. Then, on the assumption that 1,472,000 gainfully occupied persons whose production is not included in the survey were no less productive in the broad sense of the term than the remaining 2,455,591† gainfully occupied persons, about three-fifths should be added to our total net production to arrive at an estimate of the grand total value of the production of all gainfully occupied Canadians. Since the net value of

* Revised by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

† This figure includes 169,263 gainfully occupied persons whose industries were not specified but who were mainly general labourers and office clerks. The products of the labour of these persons were probably mainly included in the survey of production, but here it is assumed that they were all so included.

production of commodities as stated in this survey was \$2,394,720,688 in 1935, the grand total money value of the productive activities of the gainfully occupied population of Canada in the same year may be estimated at \$3,832,000,000 in round figures. (See the item "Income, national" in the index of this volume.)

'Gross' and 'Net' Production.—The values of products are shown under two headings, namely, "gross" and "net". Gross production represents the total value of all the individual commodities produced under a particular heading. Net production represents an attempt to eliminate the value of materials, fuel, and electricity consumed in the production process. The net figures, it will be seen, appear chiefly in the case of secondary production or manufactures, though eliminations were also made in certain cases in the primary or extractive industries, as, for example, seed in the case of field crops, and feed in the case of farm animals. On the other hand, such items as fertilizers in the case of field crops, and reforestation in the case of forestry, are disregarded as partaking of the nature of replacement. The cost of fuel and electricity is deducted in accordance with Resolution 23 of the Conference of British Commonwealth Statisticians, 1935, which states: "The term *net output* or *net value of production* should be used to denote the value added in each industry to the cost of the objects used in production, including all materials, whether transformed or not".

Difficulties in Differentiating between the Branches of Production.—A survey of production must differentiate between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile, and cement are frequently included under "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are classified under "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. In the summing up, production in such industries is regarded as primary production and also as secondary production, but the duplication is eliminated in the grand totals.

Branches of Production.—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

Agriculture.—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc., made on the farm. The duplication is eliminated when obtaining the grand total values of gross and net production.

Forestry.—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of products such as pulp and paper, lumber, lath, shingles, and cooperage stock.

Fur Production.—The item of fur production is limited to wild-life production. To obtain a total of the pelts produced in Canada, it would be

necessary to add to the wild-life output the production of pelts on fur farms, which is included in the total for agriculture.

Mineral Production.—Under mineral production many items are included that are also allocated to manufactures. Considerable overlapping exists as between mineral production on the one hand and manufactures on the other. The Dominion Bureau of Statistics presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

Construction.—Due to the availability of the totals compiled by a new branch of the Dominion Bureau of Statistics, the treatment of construction data was altered beginning with 1934. The records prepared by the MacLean Building Reports, Limited, were used from 1920 to 1933, 35 p.c. being deducted from the gross totals to obtain the net value of production for the industry. An element of incomparability with previous figures was thus introduced, but the use of official records in this connection is desirable.

Total Manufactures.—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as manufactures, *viz.*, dairy factories, fish canning and curing, sawmills, pulp and paper mills, certain mineral industries, and electric power. This duplication is eliminated from the grand totals as shown in the tables. The figures given for total manufactures are inclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for total manufactures and for the other eight divisions, and deducting the amount of duplication between manufactures and the primary industries.

Section 1.—The Leading Branches of Production in 1935.

The net value of a nation's commodity production is usually an excellent criterion of the purchasing power of the people. Confining the analysis to the net production of commodities—net production signifying the value left in the producers' hands after the elimination of the value of materials consumed in the production process—it is observed that, after recording successive declines for five years, the net value of Canadian production turned upward in 1934 to register a substantial gain over the preceding year. This advance was continued in 1935 when the net value of commodities produced, estimated by the Dominion Bureau of Statistics on the basis of data compiled by its various branches, was \$2,395,000,000 compared with a revised estimate of \$2,234,000,000 in 1934. The gain of more than 7 p.c. represents a marked betterment over the preceding year in all productive operations. Each of the nine main branches of production participated in the advances of 1934 and 1935. The greatest absolute gains were recorded in manufacturing and agriculture, but the largest percentage increases were in mining and forestry. Primary production showed a better percentage gain than secondary, indicating a decided revival in the production of raw materials and a greater utilization of our natural resources. Certain changes in general method, occasioned by the Conference of British Commonwealth Statisticians of 1935, unfortunately

preclude exact comparability with years prior to 1934, given in earlier editions of the Year Book, and statistics in the tables given below are, therefore, limited to the years 1934 and 1935.

The net output of agriculture in 1935 was greater than in any other year since 1930. The increase over 1934 amounted to \$30,600,000 or 5.2 p.c., the total reaching \$623,000,000. Mining continued to be the most progressive of Canadian industries and has extended, year by year, the upturn inaugurated in 1933.

The percentage gain in the value of manufacturing stood on a par with that of agriculture, the net total advancing 5.7 p.c. or \$69,300,000 over the comparable figure for 1934.

¹ A number of items for 1934 have undergone revision since the publication of the 1937 Year Book.

² In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and purchased electricity was deducted from the gross value of manufactures, mining, forestry, and electric power for 1934 and 1935 in arriving at the net figures. This is in addition to the usual deduction for cost of materials.

³ The gross values of agricultural production here exceed those given in Chapter VIII, Agricultural Statistics, of this edition of the Year Book, by the amounts paid to patrons of dairy factories for milk and cream.

⁴ Gross values comprise the mineral production, as shown in Chapter XII, Table 1, plus the value of ores and other raw materials of the smelting industry.

⁵ Statistics of custom and repair shops, including custom clothing, dyeing and laundry work, boot, jewellery, automobile and bicycle repairing, and custom and repair work by foundries were not collected after 1921. The totals for 1934 and 1935 were estimated according to the percentage change in the data for manufacturing.

⁶ The item "Manufactures" includes dairy factories, sawmills, pulp and paper mills, fish canning and curing, electric power production, shipbuilding, and certain mineral industries which are also included in other headings above. This duplication, amounting in 1934 to a gross of \$619,840,054 and a net of \$341,095,463 and in 1935 to a gross of \$687,608,827 and a net of \$342,073,422, is eliminated from the grand total.

⁷ Secondary production includes the above-mentioned duplication. The percentage of the net manufactures, freed from all duplication, to the total net production in 1935 was 39.67, and, under like conditions, the proportion of all secondary production to the grand total of net production was 47.5 p.a.

Grand Totals².....	2,233,697,018	2,394,720,688

¹ A number of items for 1934 have undergone revision since the publication of the 1937 Year Book.

² The item "Totals, Manufactures" includes the following industries, which are also shown elsewhere, the amount of the duplication being deducted from the grand total:—

	1934.	1935.
Dairy factories.....	29,012,319	30,832,166
Sawmills and pulp and paper mills.....	102,667,752	112,038,567
Fish canning and curing.....	8,166,192	8,340,663
Mineral industries.....	78,487,207	65,738,948*
Electric power.....	122,461,993	125,123,078
Totals.....	341,695,463	342,073,422
Manufactures.....	881,248,436	950,168,720

* The decrease in the duplication for mineral industries was due to a change in method of valuation of ores.

Relative Importance of the Several Branches of Production.—Owing to adverse weather conditions and low prices experienced by agriculture, the relative position of manufacturing has become more pronounced in recent years. Agricultural production in 1935 represented about 26 p.c. of the net output of all branches while the total value added by the manufacturing process was nearly 54 p.c. of the total net production. However, a number of industries listed under manufactures

are also included in the several extractive industries with which they are associated. Eliminating this duplication, the output of the manufacturing industries not elsewhere included, was 39.7 p.c. of the total net production. Mining held third place in 1935 with a percentage of nearly 10 p.c., followed closely by forestry with 9.5 p.c. The fifth and sixth places were held by electric power and construction, respectively, while custom and repair, fisheries, and trapping followed in the order named.

Section 2.—The Provincial Distribution of Production.

Seven of the nine provinces showed gains in net production in 1935 over the preceding year. Due to increases of important proportions in each of the three provinces, the Maritimes showed a greater percentage gain than in any other economic area. Increases in Prince Edward Island, Nova Scotia, and New Brunswick were 8.6 p.c., 9.9 p.c., and 10.4 p.c., respectively.

Extending the gain of the preceding year, the net production of Ontario recorded an increase of 8.1 p.c. in 1935. The increase in Quebec at 6.1 p.c. was also substantial. The trend was uneven in the Prairie Provinces. Saskatchewan, due mainly to field crops, showed a gain of 27.5 p.c., but minor declines were recorded in Manitoba and Alberta. Recovery continued in British Columbia, an advance of 8.8 p.c. having been shown over the preceding year.

Relative Production by Provinces, 1935.—Ontario held first place among the nine provinces in the creation of new wealth, producing 43.7 p.c. of the Dominion total compared with 43.4 p.c. in 1934. Quebec followed with an output of 25.4 p.c. against 25.6 p.c. in the preceding year. British Columbia and Alberta were in third and fourth places, respectively, the contribution of the former in 1935 being 7.8 p.c. compared with 6.5 p.c. for Alberta. Saskatchewan and Manitoba were in fifth and sixth places, respectively. Nova Scotia, New Brunswick, and Prince Edward Island followed in the order named.

¹ A number of items for 1934 have undergone revision since the publication of the 1937 Year Book.

² In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and purchased electricity was deducted from the gross value of manufactures, mining, forestry, and electric power for 1934 and 1935. This is in addition to the usual deduction for cost of materials.

³ Estimates of population on which these figures are based will be found on p. 155.

⁴ The value of production in Yukon, mainly in the mining and trapping industries (including similar industries of the N.W.T.), was \$2,996,640 gross and \$2,515,988 net in 1934 and \$3,375,554 gross and \$3,110,950 net in 1935.

Per Capita Production by Provinces.—In the foregoing table the net commodity production is appraised on a per capita basis by provinces.

Owing to its preëminent industrial position, Ontario had a net commodity production of nearly \$286 per capita in 1935, an improvement of \$18 per capita over 1934, principally due to appreciable advances in manufacturing, agriculture, and mining. British Columbia ranked second with a per capita production of \$250, registering, largely because of forestry and manufacturing, an increase of \$17 per capita over 1934. Alberta held third place with \$203 per capita, a decline of \$12 from 1934 due mainly to reduction in agriculture. Quebec, with a per capita production of \$198, was fourth in rank, increasing its per capita figure by nearly \$9 over 1934. Nova Scotia with \$160, Saskatchewan \$146, Manitoba \$144, New Brunswick \$142, and Prince Edward Island \$124, produced in the order named. Of the nine provinces, Manitoba and Alberta alone showed recession which was limited in the former province to about \$5.50 per capita.

The Dominion figure of net commodity production at \$219 per capita was 6 p.c. or \$13 in advance of the figure for 1934. The estimated increase in population in 1935 over 1934 was only 1 p.c.

Section 3.—Leading Branches of Production in each Province, 1935.

Maritime Provinces.—The net value of production in the Maritimes during 1935 rose 10 p.c. or \$14,216,000 over the preceding year. Agriculture contributed 23.3 p.c. while manufacturing, eliminating all duplication, accounted for 22 p.c. Construction was much more active than in 1934. Mining remained relatively the same with nearly 11 p.c. of the Maritime total attributable to this industry. Fisheries showed a recession of 8.1 p.c., although actual net value was up nearly \$400,000.

Quebec.—Manufacturing continued to be the leading industry in Quebec, contributing, without duplication, 46.4 p.c. of the net value of production during 1935. Agriculture accounted for over 18 p.c. of the net output while forestry, on the revised basis, rose in importance to nearly 14 p.c. of the net total.

Ontario.—The net value of manufacturing in Ontario during 1935, less duplication, was exactly 50 p.c. of the provincial total. Agriculture accounted for 20 p.c. or a net value of \$209,182,000. Mining advanced to 12.4 p.c. while forestry also showed betterment over the previous year at 5.5 p.c. of the provincial total.

Prairie Provinces.—Agriculture accounted for 61.0 p.c. of the value of net production of the Prairie Provinces in 1935, a drop of 1 p.c. from the preceding year. Manufacturing advanced slightly at 17.3 p.c. Mining showed a notable gain, the percentage increase being from 6.4 to 7.3 p.c. of the total for the Prairie-Provinces.

British Columbia and Yukon.—The net output from manufacturing in British Columbia and Yukon during 1935 was \$86,196,000 or 46.1 p.c. of the provincial net production, but over half of this amount was derived from manufacturing processes closely associated with the primary industries, such as logging, mining, and fishing. Eliminating this duplication, manufactures comprised 21.7 p.c. of the net provincial output, whereas forestry supplied 25.8 p.c., mining 15.7 p.c., agriculture 13.9 p.c., and fisheries 8.1 p.c.

Tables 4 and 4A give the details of gross and net production, by industries, for each province for the years 1934 and 1935, respectively. Only in Prince Edward Island, Saskatchewan and Alberta does agriculture now rank in first place, manufactures being more important than agriculture in each of the other six provinces.

Tables 5 and 5A offer some very interesting comparisons. For instance, on a provincial percentage basis mining is very much more important in Nova Scotia than it is in the premier mining province of Ontario. Again, the generation of electric power is relatively a more important industry in Nova Scotia, in New Brunswick, in Manitoba, and in British Columbia than it is in Ontario. While manufacturing is of first importance in Ontario and Quebec, it is also of major relative importance in Manitoba and Nova Scotia.

4.—Gross and Net Values of Production, Classified for each Province, by Industries, 1934.

¹ The totals for manufactures involve duplicated amounts which were deducted in computing the total production for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. The following are the amounts of the duplication by provinces: Prince Edward Island, gross \$1,644,839, net \$566,828; Nova Scotia, gross \$19,779,914, net \$10,206,305; New Brunswick, gross \$24,024,474, net \$13,057,606; Quebec, gross \$194,045,740, net \$109,372,323; Ontario, gross \$240,839,887, net \$134,263,996; Manitoba, gross \$21,202,322, net \$14,444,337; Saskatchewan, gross \$11,208,380, net \$6,081,191; Alberta, gross \$12,752,897, net \$7,388,612; British Columbia and Yukon, gross \$94,251,595, net \$46,254,262, Canada, gross \$619,840,054, net \$341,095,463. ² The value of production in Yukon, mainly in the mining and trapping industries (including similar industries of the N.W.T.), was \$2,996,649 gross and \$2,515,988 net in 1934.

¹ The totals for manufactures involve duplicated amounts which were deducted in computing the total production for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. The following statement gives the amounts of the duplication by provinces: Prince Edward Island, gross \$153,141, net \$547,018; Nova Scotia, gross \$19,932,197, net \$10,573,380; New Brunswick, gross \$26,504,897, net \$14,471,209; Quebec, gross \$213,552,538, net \$111,914,091; Ontario, gross \$268,244,405, net \$134,072,458; Manitoba, gross \$25,039,318, net \$10,987,888; Saskatchewan, gross \$13,409,300, net \$6,128,635; Alberta, gross \$13,100,240, net \$7,775,480; British Columbia and Yukon, gross \$105,894,791, net \$45,603,263; Canada, gross \$937,608,827, net \$342,073,422.

² The value of production in Yukon, mainly in the mining and trapping industries (including similar industries of the N.W.T.), was \$3,375,554 gross and \$3,110,950 net in 1935.

CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1931, 28.7 p.c. of the total gainfully occupied population and 33.9 p.c. or over one-third of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see p. 60 of this volume.

This chapter treats of current governmental activities in connection with agriculture, including those of the Dominion and Provincial Experimental Stations. Statistics of agriculture follow, including agricultural revenue and wealth, field crops, farm live stock and poultry, dairying, fur farming, fruit, special crops, farm labour and wages, prices, miscellaneous, and, since Canadian exports of agricultural commodities are sold in the world market, a review of world statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

Section 1.—The Government in Relation to Agriculture.

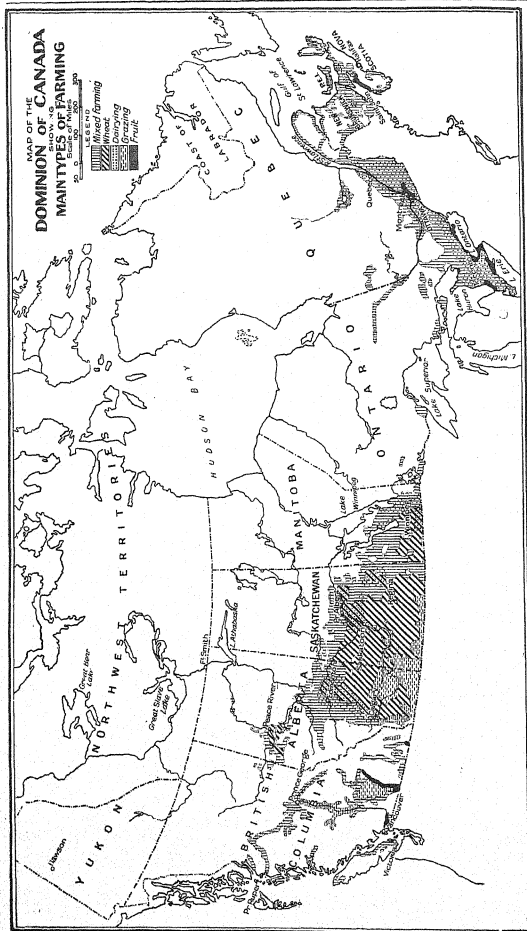

It is provided in Section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister. A short sketch of the functions of the Dominion Department was published at pp. 212-223 of the 1936 Year Book, and an outline of agricultural progress in Canada and the Dominion Experimental Farms System appeared at pp. 221-228 of the 1937 Year Book.

Subsection 1.—The Prairie Farm Rehabilitation Program.*

The need for the Prairie Farm Rehabilitation Program arose from the severe conditions of drought and soil drifting which have been experienced almost continuously since 1929 in southwestern Manitoba and the southern parts of Saskatchewan and Alberta. These conditions have resulted in serious reductions in crop yields and repeated crop failures. As the type of farming in this area is limited by the semi-arid climate to grain production, principally grain for export, these reduced yields, coupled with the extremely low grain prices which prevailed from 1930 to 1935, have entailed enormous economic losses and considerable hardship to the agricultural population. Very large governmental expenditures have been necessary to relieve actual want, while the disparity between income and capital investment has resulted in drastic debt and tax adjustments and seriously interfered with credit facilities. The nation-wide repercussions of this agricultural

* Prepared under the direction of Dr. E. S. Archibald, Director of the Dominion Experimental Farms, by William Dickson, Esq., Field Husbandry Division, Central Experimental Farm, Ottawa.

MAIN TYPES OF FARMING IN CANADA.

crisis in the Prairie Provinces led to the inauguration by the Dominion Government of the rehabilitation program.

The Prairie Farm Rehabilitation Act was passed by the Parliament of Canada in 1935 to provide for the improvement of agricultural conditions in those parts of the Prairie Provinces which in recent years have suffered severely from drought and soil drifting. The principal object of the rehabilitation program inaugurated by this Act is to introduce measures in the affected areas to control these conditions and to establish agriculture on a sound economic basis. These measures include the improvement of cropping and cultural practices, the conservation of surface water supplies, and necessary adjustments in land utilization. Each of these is dealt with under the headings presented below. Active co-operation between the Government and the farmers, rather than the provision of relief, is an important feature of this program.

The Act is administered by the Dominion Minister of Agriculture, operating through the Dominion Experimental Farms and other branches of the Department of Agriculture. Co-operating agencies include the governments of the three Prairie Provinces and various services of the Dominion Government. Appropriations under the Act have amounted to \$1,250,000 for the fiscal year 1935-36, \$1,184,420 for 1936-37 and \$2,000,000 for 1937-38.

CULTURAL WORK.

Aside from the lack of precipitation which is beyond human control, and which greatly reduces crop yields, soil drifting is the most serious problem encountered in the Prairie Provinces during periods of drought. Fortunately, methods of controlling this menace are available, the success of which is enhanced by their widespread adoption throughout the affected area. For this reason a very considerable amount of the cultural work under the rehabilitation program is directed to the control of soil drifting.

Soil Drifting.—The prevalence of soil drifting during dry years in the Prairie Provinces is caused, in large measure, by the very extensive practice of summer-fallowing. Under the average climatic conditions which prevail in the southern parts of the Prairie Provinces, the amount of precipitation received is not sufficient to produce a profitable crop each year on the same land. This fact has led to the practice of summer-fallowing, whereby part of the land is kept bare of vegetation by cultivation during one year in order that any rainfall received may be stored to augment moisture supplies for crop production in the succeeding year. As this practice exposes a large proportion of the crop land in a pulverized condition to the erosive action of high winds, soil drifting is apt to occur on summer-fallow during dry years.

The attack on soil drifting under the rehabilitation program involves the introduction of improved methods of summer-fallowing. One of the most effective methods of soil-drifting control is strip farming, which consists of dividing large fields into alternate narrow strips of crop and summer-fallow. These strips, which may vary in width from 8 to 16 rods, are run at right angles to the direction of the prevailing strong winds. Drifting, which may start on the fallow strips, is prevented from spreading by the crop or stubble on the adjacent strips. In this manner the cumulative effect of drifting on large fields is avoided. Strip farming has been practised successfully for many years in parts of southern Alberta, and its use throughout the drought area is being widely adopted.

In the cultivation of fallow land it is desirable to leave as much stubble and other "trash" on the surface as possible, and to produce a rough cloddy tilth, in order to reduce susceptibility to drifting. Good trash cover may be secured by shallow cultivation; in this respect, the "ploughless fallow" in which the fallow and subsequent seed bed is cultivated without ploughing, is being advocated and is coming into wide use. Rough tilth is secured by the same method, and by avoiding the use of implements which produce extreme pulverization. A combination of surface cultivation and strip farming is proving useful in controlling soil drifting. In some cases cover crops of spring grain sown in the late summer are used to prevent drifting. However, considerable difficulty is experienced in getting stands of these crops, particularly in dry years or when grasshoppers are numerous. Various emergency methods are also used, such as spreading straw on small areas of incipient drifting and cultivating or ridging land at intervals across a field.

Where the control of soil drifting cannot be effected by any of the foregoing methods, as on some areas of sandy land, regrassing may become necessary. Owing to the difficulty of securing a stand of grass on land which is subject to periodical drifting, it is frequently necessary to provide some vegetative protection for the soil. Cover crops of grain, such as fall rye, are used for this purpose. Grass seed of the desired species, usually crested wheat or brome grass, is seeded when sufficient protection has developed to check drifting. Sometimes several attempts at regrassing are necessary in order to secure the desired result.

Cultural Rehabilitation Work by the Experimental Farms in Association with Local Bodies.—The development of cultural work under the rehabilitation program is supervised from the Dominion Experimental Farms located in the drought area. As such experimental farms have been in operation at Brandon, Man., and Indian Head, Sask., for over 50 years, and at Scott, Sask., Swift Current, Sask., and Lethbridge, Alta., for many years, they form ideal centres for the spread of rehabilitation work through the agencies described below.

District Experiment Sub-Stations.—These are essentially sub-stations of the Dominion Experimental Farms, established for the purpose of undertaking experimental work and illustrating methods of crop production, suitable for various districts. Comprising usually one section of land, these sub-stations are private farms operated under the supervision of the local experimental farm. In addition to field work with rotations and soil-drifting control practices, these sub-stations serve as experimental demonstrational points for farm gardens, shelterbelts, and various other farmstead improvement projects. Since the inauguration of the program, 47 sub-stations have been established at strategic points.

Reclamation Stations.—Investigations to determine the most economical methods of dealing with marginal land on which crop production has been abandoned due to soil drifting, are in progress at reclamation stations located at Melita, Man., Mortlach, Sask., Cadillac, Sask., and Woodrow, Sask. Smaller reclamation projects are in progress at many points where drifting has been severe including over 40 demonstrations of the best methods of establishing grass cover on light land.

Agricultural Improvement Associations.—In order to promote the widespread adoption of rehabilitation measures, some means of establishing contact with the farmers and of enlisting their co-operative support, is essential. This has been effected through the organization of farmers into agricultural improvement associations, the purpose of which is to secure united community action on drought

and soil-drifting problems. By the end of 1937 some 97 of these associations had been formed, with a total membership of over 12,000, or roughly about one-tenth of the farmers in the drought area. Each association receives some small financial assistance for operating expenses, and members may receive small supplies of grass seed, trees, and other materials.

Agricultural improvement associations have proved very effective in securing the widespread adoption of cultural practices, such as strip farming, which are useful in combating soil drifting. A noteworthy feature of this work has been the assistance given by officers of associations to the Dominion Experimental Farms in organizing large-scale emergency operations for the control of soil drifting in certain dangerous areas, over 15,000 acres having been covered in southwestern Saskatchewan alone during 1937.

Tree Planting.—The value of shelterbelts of trees and shrubs for the protection of farm buildings and gardens against high winds on the open prairie, is generally recognized, and free planting stock for this purpose has been supplied to prairie farmers by the Dominion Government since 1901. Under the rehabilitation program some special assistance is given to farmers in planting farm-home shelterbelts, and model plantations are being established on district experiment substations for demonstration purposes.

The difficulty of maintaining large plantations in a region which is naturally treeless by reason of insufficient rainfall, however, has prevented any widespread use of shelterbelts for field-crop protection. With the object of determining definitely the effect of large-scale shelterbelts on crop production, especially as regards the control of soil drifting and the conservation of moisture, field-crop shelterbelt associations have been organized among farmers at four different points in the drought area, namely: Lyleton, Man.; Conquest, Sask.; Aneroid, Sask.; and Ribstone, Alta. In each of these associations the members plant shelterbelts around their fields covering an area of approximately one township. A similar municipal project for bluff planting at Kindersley, Sask., is also being assisted. As every possible effort is being made to ensure the success of these projects, the results secured will have a decisive influence on future afforestation policies in the prairies.

Supervision of the foregoing activities and seedling supplies are furnished by the Forest Nursery Stations of the Dominion Experimental Farms, located at Indian Head, Sask., and Sutherland, Sask.

Soil Surveys.—With the object of determining the nature, location, and extent of different types of soil in the Prairie Provinces, soil surveys have been conducted by the provincial universities for a number of years, with financial assistance from the Dominion Experimental Farms. Since 1935 this work has been paid for from rehabilitation funds, in order to accelerate the mapping of the drought area. By the end of 1937 all of the drought area in Manitoba and Saskatchewan, and more than half of the area in Alberta, had been covered by a reconnaissance survey.

Soil Research.—Investigations into the fundamental principles of crop production under semi-arid conditions are in progress at the new Soil Research Laboratory, Dominion Experimental Station, Swift Current, Sask. Special attention is given in this work to soil moisture problems, soil-drifting control and soil fertility. A certain amount of soil research work is also being conducted in co-operation with the universities of each of the Prairie Provinces.

WATER DEVELOPMENT.

The development of surface-water resources for agricultural use is a major rehabilitation activity which has already resulted in substantial benefits to farmers and ranchers in the drought area. The object of this work is to provide supplies of water throughout the year by storing spring run-off in dugouts and dams for domestic, stock-watering, and irrigation purposes. The principal value of this type of development is to enable live-stock production in areas where it would be otherwise impossible. This work is supervised by the Water Development Committee with headquarters at Regina, Sask. The personnel of this Committee includes representatives of the Dominion Department of Agriculture and of the water-rights branches of each of the Prairie Provinces.

Under the rehabilitation program, two types of projects are being constructed—small projects on private farms and large projects for community use. Small projects include excavations known as dugouts, dams on small streams, and irrigation works, in the construction of which farmers receive free engineering services, and financial assistance in proportion to the amount of work done. The basis of financial assistance is $4\frac{1}{2}$ cents per cubic yard of earth moved, plus additional amounts for rock work and the purchase of materials. Maximum assistance for the different types of small projects are: \$75 per dugout, \$150 per stock-watering dam, and \$350 per irrigation project. Where two or more farmers co-operate in a project, the maximum may be increased to \$500. Government assistance for large projects is determined for each project on its merits, sometimes amounting to the full cost of construction.

Applications from the drought area for assistance with water development are received by the Water Development Committee. Small projects, when approved, are referred to the appropriate provincial member of the Committee for final authorization. Engineering and financial assistance for these projects are provided from rehabilitation funds. Large projects are passed through the Dominion Department of Agriculture for the Minister's approval.

Progress with Small Water Development Projects.—From the inauguration of the program in 1935 to Jan. 15, 1938, a total of 11,392 applications for assistance with small projects was received. During the same period 4,285 small projects were reported as completed, comprising 2,541 dugouts, 1,414 stock-watering dams, and 330 irrigation projects. The irrigable area represented by the 330 small irrigation projects is approximately 12,000 acres. Most of this area will be used in growing supplies of feed for live stock.

Progress with Large Water Development Projects.—Large projects include the construction of storage dams and irrigation works for incorporated bodies, such as rural municipalities and irrigation districts. In some cases assistance has been provided for repair and extension work on existing irrigation projects, where the discontinuance of water supplies would have caused serious hardship. The basic principle governing the selection of large projects is to secure a maximum of benefit with a minimum of cost.

In the development of large irrigation projects full advantage is taken of the experience gained in the irrigation districts of southern Alberta since the opening of the present century. The bulk of new irrigation is intended for the production of forage crops, to provide dependable supplies of feed to supplement grazing in range areas. The extensive production of grain on irrigated land is not contemplated.

Since the beginning of the program several large irrigation projects have been completed. These include works for the irrigation of 6,000 acres at Val Marie, Sask., 3,900 acres at Eastend, Sask., 900 acres at Middle Creek, Sask., and 1,500 acres at Adams Lake, Sask. The foregoing projects will eventually form units in a larger irrigation system on the southern watershed of the Cypress hills covering 20,000 acres of irrigable land, with a main reservoir of 70,000 acre-feet capacity now in construction on Cypress lake. On the northern watershed of the Cypress hills, the Downie Lake irrigation project, also in course of construction, will provide irrigation water for about 10,000 acres. It is important to note that the development of irrigation in the Cypress Hills district will materially stabilize live-stock production on over 3,000,000 acres of range land.

Construction of works have also been completed for the irrigation of 3,600 acres at Wildhorse, Alta., 3,600 acres at Mountain View, Alta., 6,000 acres at Moose Mountain Lake, Sask., and 3,500 acres along the Souris river north of Estevan, Sask. A large number of smaller community irrigation schemes have been completed or are in course of construction.

In the Eastern Irrigation District of Brooks, Alta., existing facilities have been extended to irrigate about 10,000 acres of land near Tilley and further extensions to about 25,000 acres in the Rolling Hills district are in progress.

Altogether, new irrigation works under the rehabilitation program, including large and small projects completed or in progress at the end of 1937, represent a total irrigable area of over 100,000 acres. In addition, extensive repairs have been made to the works of the Canada Land and Irrigation Project to ensure continuance of water supplies to some 45,000 acres of irrigated land near Vauxhall, Alta.

Construction of large community storage dams for stock-watering purposes has been completed or is in progress at many points in the drought area.

LAND UTILIZATION.

During the period of agricultural settlement in the Prairie Provinces some areas of marginal and submarginal land were broken for crop production. Some of this land was subsequently abandoned, but a considerable acreage is still under cultivation with little prospect of producing profitable crops. To rectify this condition, adjustments in land utilization are being made on the basis of information gained through the Dominion Experimental Farms, soil surveys, and economic surveys. The most important development in this respect is the creation on submarginal land of community and reserve pastures.

Community Pastures.—These pastures, which vary in area from about 5,000 to nearly 50,000 acres each, are established on submarginal land in the vicinity of somewhat better farm land. Each pasture is being fenced, supplied with stock-watering facilities, and, where necessary, seeded to grass. Grazing privileges, under government supervision, will be accorded to operators of farms in the vicinity. In this manner the usefulness of certain areas will be increased, and their liability to soil drifting removed.

By Dec. 31, 1937, some 47 areas in Saskatchewan, totalling 503,710 acres, and 8 areas in Alberta, totalling 595,840 acres, had been tentatively selected as community pastures. By the same date, the organization of 16 pastures in Saskatchewan with a total of 175,900 acres was practically completed.

Reserve Pasture.—Another development in land utilization, somewhat similar to the foregoing, is the proposed establishment of large reserve pastures. One object of this phase of the program is to prevent uncontrolled agricultural resettlement. Another is to provide protected grazing areas into which stock might be moved in the event of future droughts. Three such areas totalling 3,064,320 acres have been tentatively selected in southwestern Saskatchewan in connection with irrigation developments south and north of the Cypress hills.

SIGNIFICANCE OF THE REHABILITATION PROGRAM.

Certain significant facts in connection with the rehabilitation program described above are worthy of notice. Recent drought conditions have been unprecedented in so far as prairie agriculture is concerned, but there is evidence that similar dry periods have occurred at long intervals prior to the settlement of the great plains. The adoption of whatever cropping practices will best enable farmers to withstand periodic droughts is, therefore, a major phase of rehabilitation.

Periodic droughts are inevitable, but their adverse effects can be minimized by the application of measures based on experience and investigation.

Subsection 2.—Provincial Departments of Agriculture.*

Prince Edward Island.—The Department of Agriculture is presided over by a Minister, and the staff consists of a Deputy Minister and live-stock superintendent, a superintendent of women's institutes, a dairy superintendent, a field promoter, and a field man for the fox industry. Assistance is given in co-operative marketing, promoting the live-stock industry and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

Nova Scotia.—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture, with the Head Office (Minister's Office) and those of the Director of Marketing and of the Land Settlement Board situated in Halifax. Many of the technical officials are situated at the Agricultural College and Farm, Truro, and other Divisions of the Department include: extension service; agricultural societies, associations, and exhibitions; dairying; poultry; live stock; entomology and botany; apiculture; and women's institutes.

New Brunswick.—The branches of the Department of Agriculture of New Brunswick are as follows: (1) live-stock and agricultural societies; (2) dairying; (3) herd improvement; (4) soils and crops; (5) poultry; (6) horticulture; (7) women's institutes; (8) agricultural representatives; (9) industry, immigration, and farm settlement; (10) elementary agricultural education; (11) beekeeping.

Quebec.—The administration of agricultural policies is entrusted to a number of services and sections as follows: extension work, which deals with all problems faced by the 98 agricultural county agents; rural economy; animal husbandry; health of animals; plant protection; agricultural education; domestic science; field husbandry; publicity; and administration. The Chief Technical Adviser is directly responsible to the Deputy Minister, who remains the main technical authority of the Department. Each service is divided into divisions dealing with minor problems. There are also many other activities such as the Quebec Farm Credit Bureau, agricultural merit competition, provincial dairy school, provincial handicraft school, etc. There is, therefore, for any kind of agricultural activity, a cor-

* For publications of provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments".

responding administrative service where accurate information may be obtained by interested persons.

Ontario.—The Ontario Department of Agriculture includes the following branches: statistics and publications; agricultural and horticultural societies; live stock; women's institutes; dairy; fruit; agricultural representatives; crops, seeds, and weeds; Commissioner of Marketing; Commissioner of Agricultural Loans; and the Milk Control Board. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the experimental farms at Guelph, Ridgetown, and Vineland, and demonstration farms at New Liskeard and Hearst.

Manitoba.—The Manitoba Department of Agriculture includes the following services and branches: agricultural extension, dairying, publications, statistics and weeds, live stock, the Debt Adjustment Board, and the Registrar of Co-operative Associations.

The Agricultural Extension Branch aids field-crop production, horticulture, beekeeping, poultry raising, suppression of insect outbreaks, boys' and girls' club work, and various home-making projects. It also directs the activities of rural agricultural representatives and supervises the work of agricultural societies, horticultural societies, and women's organizations. The Dairy Branch grades all cream supplied to creameries, supervises the activities of creameries and cheese factories and gives general support to the dairy industry. The Live Stock Branch licenses stallions and conducts projects and administers policies through which encouragement is given to the production of better types of animals.

Saskatchewan.—The Department of Agriculture includes branches dealing with: the agricultural representative service, live stock, field crops, dairying, statistics, co-operation and markets, and land utilization. There is also a bee division. The Live Stock Branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep, and hogs to farmers on cash and credit terms in the pure-bred sire areas (areas created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock), and registering brands for live stock. The poultry industry is promoted through a flock-culling service, a turkey-grading service and an approved hatchery policy. The Field Crops Branch aids in promoting good cropping and tillage practices as well as encouraging the use of good quality seed of cereal and forage crops and provides control measures for suppressing insect and weed pests. The Dairy Branch directs the grading of cream at all the creameries, promotes herd improvement through cow testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream graders and testers, and the bonding of creameries. The Statistics Branch, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers annual data respecting crops and live stock of the province. The Co-operation and Markets Branch grants charters to co-operative associations under the Co-operative Associations Act and to credit unions under the Credit Union Act, promotes co-operative activities including live-stock shipping and poultry marketing, licenses poultry dealers under the Live Stock and Live Stock Products Act, and publishes a fortnightly news letter dealing with co-operation and marketing. Under the Agricultural Representative Service, as established, the province is divided into districts where qualified men carry on promotional and educational work. The Apiary Division registers all beekeepers, and promotes better management and practices. Agricultural

societies are organized by, and grants paid through, the Department, but direction of the activities of societies is centred in the College of Agriculture of the University of Saskatchewan. The Land Utilization Board, composed of representatives of several interested departments of government, facilitates the withdrawal of lands unsuitable for such use from arable farming.

Alberta.—The main services of this Department are rendered through its various branches to the live-stock, grain-growing, dairy, and mixed-farming industries. Fairs and institutes are encouraged; rural women's organizations are assisted through the Women's Bureau; district agriculturists are located at 10 points; 2 schools of agriculture are maintained; crop reports and statistical information are prepared; short courses and field days are conducted. Some phases of agriculture receiving more recent and increased attention are: development of apiculture; encouragement of the poultry industry; more effective weed control; production and sale of registered seed; increase in forage crops and grasses; junior activities such as grain and stock clubs and school fairs; encouragement of beef-feeding associations.

British Columbia.—The Department of Agriculture deals with all matters of provincial concern connected with farming in its several phases. It consists of three main divisions, namely:—

(1) The General Administration Division is responsible for the general direction of agricultural policies; the administration of legislative measures affecting agriculture; the collection of agricultural statistics; the preparation of agricultural and horticultural displays for showing at provincial, national, and international exhibitions and assistance to fall fairs. It also distributes departmental publications; supervises soil-survey work; apiary inspection; junior club projects; farmers' and women's institutes. The Markets Branch is included in this Division.

(2) The Animal Industry Division has direct supervision over general live-stock work in the province, including live-stock promotion and improvement; brand inspection; nutritional studies; animal parasite control, and contagious diseases of animals control. This Division consists of live-stock, veterinary, dairy and poultry branches as well as the Brand Inspection Service. A pure-bred sire purchase policy is administered under which it is possible for farmers' institutes to purchase pure-bred sires under special financial arrangements with the Department. In the Dairy Branch there is a herd improvement service operating through Cow Testing Associations; official lists are maintained of pure-bred dairy sires which have five or more daughters with production records.

(3) The Plant Industry Division includes horticulture, plant pathology, entomology, and field-crop branches. Services of these branches include the general direction of fruit and vegetable production and various surveys dealing with orchards, small fruits and bulb acreages, as well as greenhouse areas; the suppression or control of insect pests and plant diseases; inspection and control of noxious weeds; supervision of Field Crop Union activities; local and provincial seed fairs and educational work connected with horticulture and field-crop production.

The Extension Service of the provincial Department of Agriculture maintains District Horticulturists, District Agriculturists, and District Field Inspectors at suitable points. These extension officials feature either animal industry or plant industry, depending upon the predominating type of farming carried on in the several districts. Junior Club projects are organized and supervised by extension officials in practically all areas of the province; there are now approximately one hundred clubs participating.

The detailed survey of orchard soils in the Okanagan valley which was started in 1931 as a joint undertaking between the Dominion Experimental Farms and the provincial Department of Agriculture, has been followed by reconnaissance surveys of lands adjacent to the areas formerly examined. Soil maps and soil reports covering more than half a million acres in the Lower Fraser valley and a similar area in the Okanagan valley are in the course of preparation.

Details of the work of the Feed Standards Board appointed by the provincial Minister of Agriculture and of the Pasture Committee were given on p. 226 of the 1936 Year Book.

Subsection 3.—Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198-203, inclusive, of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications, for information concerning courses and programs of work at these institutions:—

Nova Scotia.—Annual Report of the Department of Agriculture for Nova Scotia; Calendar of the College of Agriculture, Truro, N.S.

Quebec.—Announcement of Macdonald College, Macdonald College, Que., and the prospectuses and annual announcements of the College of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute and Veterinary School, La Trappe, Que.

Ontario.—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

Manitoba.—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

Saskatchewan.—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

Alberta.—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alta.

British Columbia.—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

Section 2.—Statistics of Agriculture.*

Census Statistics.—In addition to the statistics collected annually, which are the subject of this section, valuable information is published following each decennial census. The total number of farms, their tenure, acreage, value, mortgage debt, farm population, farm machinery and facilities, etc., were treated at pp. 295-301 of the 1934-35 Year Book. A summary presentation of agricultural development since 1871 was given in Subsection 9, pp. 270-273 of the 1936 Year Book.

Crop-Reporting Service.—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the issue of accurate, timely, and independent reports on crop conditions throughout the

* Revised under the direction of Dr. T. W. Grindley, Chief of the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, and reports on the milling and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXIX, Section I, under "Production".

Dominion; first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents, and others); and thirdly, for reporting to the Institute of Agriculture at Rome (to which Canada is an adhering country) in return for reports on the production of other countries and of world totals which influence prices and consequently affect the interests of Canada. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. For the Prairie Provinces, these are issued every week from the latter part of May to the end of August, while the reports on a Dominion-wide basis are issued every two weeks during the same period. The program of reports for 1938-39 is given in the *Monthly Bulletin of Agricultural Statistics*, January, 1938, pp. 59-61, and is also issued as a special leaflet.

Annual Statistics.—In addition to the crop-reporting service, statistics of the areas under field crops and of the numbers of farm live stock are collected. These arrangements have been in force since 1918, and are carried out by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by schedules which are at present returned by about one-fifth of the farmers of Canada. They form the basis of the estimates for the whole of Canada. The results for wheat, oats, barley, rye, and flaxseed in the three Prairie Provinces are ready for publication in August, while the results for the remaining crops and for the numbers of farm live stock are published in November and December. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

The June schedule covers the areas sown to field crops, the numbers of live stock and poultry on hand, and breeding and marketing intentions with regard to live stock and poultry. The December schedule contains practically the same items with the exception of field-crop areas.

The schedules are distributed and collected through the agency of the rural schools in New Brunswick, Quebec, Ontario, Manitoba, and Saskatchewan, while in Prince Edward Island, Nova Scotia, Alberta, and British Columbia the schedules are sent direct to the farmer through the mail.

Monthly Bulletin of Agricultural Statistics.—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its thirty-first year. It is the official organ not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, eggs, fruit, apiculture, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, visible supplies, prices, values, foreign agriculture, and other subjects in considerable variety.

Presentation of Agricultural Statistics.—In the current edition of the Year Book, statistics of agriculture are presented under the following headings: (1) value of agricultural production and of farm capital; (2) acreages, yields, and values of principal field crops; (3) farm live stock and poultry; (4) dairying; (5) horticulture; (6) special agricultural crops; (7) farm labour and wages; (8) prices

of agricultural produce; (9) agricultural statistics of the census; (10) miscellaneous agricultural statistics; and (11) international agricultural statistics.

Subsection 1.—Value of Agricultural Production and of Farm Capital.

Value of Agricultural Production.—Table 1 shows, under principal headings, the gross agricultural revenue of Canada, by provinces, for the years 1932 to 1936. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production. The total revenue for 1936 shows an increase of \$112,084,000 or nearly 12 p.c. as compared with 1935.

1.—Estimated Gross Value of Agricultural Production in Canada, Itemized by Provinces, 1932-36.

NOTE.—Preliminary figures for 1937 and revised figures for 1933-36 will be found in the Monthly Bulletin of Agricultural Statistics, March, 1938.

¹ Based on preliminary returns from the 1936 Quinquennial Census.

The items included in the term "farm capital" as used in Table 2, are lands and buildings, implements and machinery, including motor trucks and automobiles, and live stock, including poultry and animals on fur farms. The 1931 values of lands, buildings, implements, and machinery were reported by the decennial census taken at June 1, in that year. Changes in the total value of lands and buildings for the years 1932 to 1936 have been based on the value of occupied farm lands reported annually by crop correspondents. Changes in the annual values of farm implements and machinery have been estimated on the basis of sales reported each year.

The current value of farm capital in Canada for 1936 is estimated at \$4,628,375,000 as compared with the revised estimates of \$4,712,391,000 for 1935; \$4,464,147,000 for 1934; \$4,443,159,000 for 1933; \$4,515,944,000 for 1932; and \$5,220,660,000 for 1931.

Subsection 2.—Acreages, Yields, and Values of Field Crops.

The Chief Field Crops of the Latest Ten Years.—In Table 3 will be found a summary statement of the acreages, yields, and values of wheat, oats, barley, rye, buckwheat, potatoes, hay and clover, and alfalfa for the latest ten years. Comparative figures back to 1908 were shown at pp. 230-232 of the 1929 Year Book.

A rapid increase in the acreage of field crops was a characteristic of the pre-war and the war periods, when settlement of the western plains occurred. During the latest ten years acreages have been relatively stable for wheat and oats. Fluctuations in the areas devoted to barley, rye, and flax have been quite marked as changes in the prices of these crops encouraged or discouraged production. Hay and clover acreage has shown a tendency to decline, but an upward trend in alfalfa acreage has occurred, due to the development of seed-producing areas in western Canada. Successive droughts in the West have considerably reduced production of the principal grain crops in the past few years, and thus the data given in the table do not reflect the average productive capacity of the areas sown to each crop. Certain figures for earlier years on acreage, yield, and value will be found in the Statistical Summary of the Progress of Canada at the beginning of this volume.

3.—Acreages, Yields, and Values of Principal Crops Grown in Canada, 1925-37.

NOTE.—Comparative figures for the years 1908-20 are given in the Canada Year Book, 1929, pp. 230-232. The total value for wheat for 1912 should be \$139,000,000 instead of \$19,000,000.

¹ Improved land under pasture.

² See text immediately following this table.

The foregoing totals are not entirely comprehensive since those for the Maritime Provinces, Quebec, and Ontario include all pasture, seeded and natural, while the figures for the four western provinces are 'seeded pasture' only, except for the year 1936 when the corresponding data for the Prairie Provinces are not available. The 1936 figures shown for these three provinces represent the acreage of 'improved land under pasture' as reported in the returns of the Quinquennial Census of the Prairie Provinces for 1936. The total figure for Canada shown for that year, therefore, although it is a more representative total than those for other years is not comparable with them.

Most of the land used for pasture in the Prairie Provinces is 'natural'. The census figures for the area under 'natural' pasture in 1936, with the corresponding figures from the Census of 1931 within brackets are, in acres, as follows: Manitoba 3,304,017 (3,601,644); Saskatchewan 15,230,425 (15,755,179); Alberta 15,196,595 (15,960,335).

The areas under grazing leases in the western provinces as at Mar. 31, 1935-37, are reported by the provincial lands administration branches as shown in Table 7.

7.—Provincial Lands under Grazing Leases, 1935-37.

Province.	1935.		1936.		1937.	
	Number of Leases.	Acres.	Number of Leases.	Acres.	Number of Leases.	Acres.

Distribution of Wheat and Oat Crops.—The distribution of the wheat crops of Canada for the years ended July 31, 1936 and 1937, is calculated in Table 12.

12.—Distribution of the Canadian Wheat Crops, by crop years, 1935-36 and 1936-37.

NOTE.—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 4½ bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933. For 1934 and later years, preliminary estimates will be found in the August numbers of the Bulletin.

¹ Revised since the publication of the 1937 Year Book.

Table 13 presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal, and rolled oats; the quantities retained for seed; and the quantities milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada, for feeding to live stock, this amount being estimated at 312,627,000 bushels in 1935-36 and 235,449,000 bushels in 1936-37.

13.—Distribution of the Canadian Oat Crops, by crop years, 1935-36 and 1936-37.

¹ Revised since the publication of the 1937 Year Book.

Per Capita Consumption of Wheat in Canada.—According to calculations, the average annual per capita consumption of wheat ground for human food in Canada during the ten years 1928 to 1937 was 4.1 bushels. The range for the period was between 3.9 and 4.4 bushels. The per capita consumption in 1937 was

estimated at 3.9 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book. Annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

Subsection 3.—Farm Live Stock and Poultry.

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 14.

14.—Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931.

Egg Production.—Table 19 gives the estimated numbers of egg-producing hens, quantities of eggs produced, prices and values, by provinces, for the years 1935 to 1937, inclusive. The data for egg-laying hens were calculated from the numbers of mature birds shown in the June surveys, with reductions to allow for cocks and cockerels. The production of eggs per hen and the average prices shown in the table were made with the assistance and advice of extension workers and poultrymen connected with the provincial Departments of Agriculture.

Subsection 4.—Dairying Statistics.

The dairy industry is dealt with under the following headings: total milk production; butter and cheese; miscellaneous factory products; and, finally, the total value of the dairy production of Canada. For the year 1937 preliminary estimates have been made which will be revised when annual returns are available.

Total Milk Production.—The data presented in Table 20 represent the quantities of dairy products expressed in terms of milk. The total milk production for 1937 is estimated at 17,188,617,700 lb., an increase of 190,202,200 lb. or 1·12 p.c. over the previous year.

All products contributed to the increase in the total milk production of Canada between 1936 and 1937 except butter, the amount of milk used in the manufacture of dairy butter having decreased by 22,060,000 lb. and in that of creamery butter by 106,387,200 lb.

¹ The data in this column for 1933-37 include the ice cream made in specialized ice-cream plants and confectionery establishments. ² Figures for 1935 and 1936 have been revised since the publication of the 1937 Year Book. ³ Subject to revision.

Butter and Cheese.—The butter output of creameries in 1937 was 246,387,300 lb., a decrease of 4,544,477 lb., or 1·81 p.c., from the record production of 1936. Dairy butter production also decreased slightly, the 1937 production being 942,000 lb., or 0·83 p.c. under that of 1936. The maximum export of butter was in the year ended June 30, 1903, when 84,128,944 lb. were exported. In the calendar year 1937 the exports were 4,096,600 lb. and the imports were 65,918 lb. The apparent consumption of butter in 1937 is estimated at 363,759,626 lb., or 32·71 lb. per capita, as compared with 355,885,234 lb., or 32·27 lb. per capita in 1936.

The quantity of factory cheese made in Canada during 1937 is estimated at 128,444,300 lb., an increase of 9,320,817 lb. or 7·82 p.c. Cheese made on farms is estimated at 1,232,300 lb., an increase of 3,000 lb. Since 1926, as shown in Table 21, there has been a significant reduction in cheese manufacturing. The decrease recorded between 1933 and 1934 was greater than that shown between 1932 and 1933, but the most outstanding decline occurred in 1927 and a lesser decline in 1929. The increase in factory cheese production which took place between 1935 and 1937 was more than sufficient to cover the 21,177,626 lb. decline which occurred between 1932 and 1934. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb.; in 1904 a maximum exportation of 233,980,716 lb. was reached. For the calendar year 1937, the exports were 88,955,300 lb. The apparent consumption of cheese in 1937 was 39,287,906 lb., or 3·53 lb. per capita compared with 40,239,072 lb., or 3·65 lb. per capita in the previous year. It will be seen that the domestic consumption as shown in 1937 represented only 30·30 p.c. of the total cheese production of the Dominion.

2 Subject to revision.

Miscellaneous Factory Products.—The production of condensed milk in Canada in 1937 is estimated at 10,861,000 lb. as compared with 7,986,693 lb. in the previous year. Evaporated milk increased from 71,074,564 lb. to 91,054,000 lb. The production of all concentrated whole-milk products amounted to 107,637,000 lb. in 1937 as compared with 81,928,106 lb. in 1936. The production of concentrated milk by-products amounted to 30,279,000 lb. in 1937 (according to provisional figures) of which 18,037,000 lb. was skim-milk powder. In 1936 the production of skim-milk powder was 18,529,982 lb. Thus concentrated whole-milk products increased 31·38 p.c. and concentrated milk by-products increased 8·58 p.c. Ice cream made in factories in 1937 amounted to 6,111,764 gallons as compared with 4,925,767 gallons in 1936, an increase of 24·08 p.c.

¹ Provisional estimate.² Gallons.

Total Value of Dairy Production.—The value of all dairy products in 1937 is estimated at \$228,403,127 as compared with \$211,421,764 in 1936, an increase of 8.03 p.c. The value of the dairy production of Canada in 1937 was the highest since 1930 and shows an advance of \$69,328,994 or 43.58 p.c. over the low value recorded in 1932. All products increased in value. The prices of creamery butter during the first quarter of 1937 were slightly lower than in the same period of the preceding year; in the summer months June to September, prices were considerably higher but dropped to about the level of 1935 prices for the rest of the year. The value per lb. of creamery butter, as deduced from Tables 21 and 23, represents an average of 23.4 cents in 1937 and 20.8 cents in 1936. Total butter shows a value of \$86,939,300 in 1937, an increase of \$8,351,140 as compared with 1936, while total cheese was valued at \$18,019,327 in 1937, an increase of \$2,291,486.

¹ The data in this column include the value of skim milk and buttermilk for the years 1930-37. For all Canada this was \$9,814,000 in 1937 as compared with \$9,604,000 in 1936, \$8,462,000 in 1935, \$8,177,600 in 1934, \$7,617,000 in 1933, \$7,074,000 in 1932, \$11,381,000 in 1931, and \$12,503,000 in 1930. ² Revised since the publication of the 1937 Year Book. ³ Subject to revision.

Apparent Consumption of Butter and Cheese, 1932-37.—The apparent consumption of butter and cheese for the years 1933-37 is shown at pp. 607-608 of this volume (Table 17 of Chapter XVII dealing with Internal Trade). Figures are given for various animal products of the total and per capita consumption calculated from the stocks at the beginning and end of the year, and the production, imports and exports during the year. For the year 1937 the preliminary figures for the consumption of butter and cheese were: butter, total consumption 363,759,626 lb. and per capita consumption 32.71 lb.; and cheese, total, 39,287,906 lb. and per capita 3.53 lb. The per capita consumption of cheese in Canada is small and has not changed materially in the past ten years. In the case of butter, on the other hand, per capita consumption is high, amounting to nearly 10 oz. per person per week in the latest years. There has been a definite increase in per capita consumption in the past ten years and even the depression years 1932 and 1933 did not show an appreciable decline.

Subsection 5.—Horticulture.

The statistical treatment of horticulture is confined to fruit growing, vegetable growing, floriculture, and nursery stock production, all on a commercial scale. Of the several branches of commercial horticulture, fruit and vegetable growing are the most important. In recent years the latter has made remarkable gains and now surpasses fruit growing in total value of production. Vegetables and flowers grown in home gardens for private use probably exceed the volume of commercial production. The processing of fruits and vegetables is an important development closely allied to the production industry. In 1936, the latest year for which complete figures are available, the total value of processed fruits and vegetables, including wine, was almost \$49,000,000.

Apple growing is the mainstay of the fruit industry in Canada, the value of commercial production averaging over \$10,000,000 annually for the years 1926-35. Other fruits cultivated include the pear, peach, plum, cherry, apricot, and grape, together with various berries of which the strawberry is most important. Substantial revenue is derived from the native blueberry and cranberry, the former being abundant over large areas of Eastern Canada, while the cranberry is found chiefly in the Maritime Provinces. Commercial fruit growing is centred mainly in the provinces of Nova Scotia, Ontario, and British Columbia. For a fuller discussion of fruit growing in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book.

Satisfactory annual statistics of the commercial vegetable-growing industry are not at present available, but important information on the subject is obtained through the decennial census. This material will be found on pp. 254-255 of the 1936 Year Book.

Annual Statistics of Fruit Production.—Table 24 shows the quantities and values of commercial fruit production in Canada for the years 1933-36, inclusive, together with the averages for the two five-year periods, 1926-30 and 1931-35. Statistics of the production for the years 1926-32 were published at p. 258 of the 1937 edition of the Year Book.

The Fruit Nursery Industry.—The first commercial nursery in Canada was established near Fonthill, Ontario, and this district still continues to be one of the leading centres of the industry. While the province of Ontario accounts for the

major part of the fruit stock output, there are nurseries distributed through all the provinces and the wholesale value of the product sold during the year ended May 31, 1937, was \$371,777, as compared with \$369,827 in 1936.

¹ Revised since the publication of the 1937 Year Book.

² Includes crab seedlings valued at \$136 not shown.

Floriculture.—The total value of floriculture and ornamental nursery stock sold in Canada during the years ended May 31, 1936 and 1937, was \$2,784,172 and \$3,138,126, respectively, as shown by Table 26. Care should be used in making comparisons between 1936 and 1937 figures, as the latter cover a much larger proportion of the industry than do the former. Similarly, the figures for 1936 are more representative than are those collected for earlier years.

26.—Quantities and Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold during the years ended May 31, 1936 and 1937.

Vegetables.—Census figures of areas, quantities, and values of vegetables produced for sale on farms in Canada, in the years 1920 and 1930, were shown at pp. 254-255 of the 1936 Year Book.

Subsection 6.—Special Agricultural Crops.

Maple Syrup and Sugar.—The Canada Year Book, 1924, contained on pp. 247 and 248 a description of the process of making maple sugar. Table 27 gives the production and value of maple sugar and syrup in Canada for the years 1935-37, as estimated by the Dominion Bureau of Statistics.

The table shows that in 1937 for the whole of Canada there was an estimated decrease of 4,818,656 lb. of maple sugar and a decrease of 790,650 gal. of maple syrup, while the combined value of the two products showed a decrease of \$1,468,739 as compared with the previous year.

Sugar Beets and Beetroot Sugar.—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with plants at Raymond, and Picture Butte, Alberta. Table 28 shows the areas, yields, and values of sugar beets grown in Canada in the years 1927-36.

28.—Acreages, Yields, and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1927-36.

NOTE.—For the years 1911-20, see the 1932 Year Book, p. 1057. For 1921-26, see the 1933 Year Book, p. 257.

Year.	Sugar Beets.					Quantity and Value of Refined Beetroot Sugar Produced.

The production in 1936-37 of raw beet sugar in the principal beet-growing countries, in thousands of short tons, was as follows: U.S.S.R., 2,203; Germany, 1,992; United States, 1,396; France, 960; Czechoslovakia, 801; United Kingdom, 650; Poland, 505; Italy, 380; Sweden, 330; Belgium, 266; Netherlands, 259; Denmark, 249; Spain, 249; Austria, 161; Hungary, 155; Yugoslavia, 110; Irish Free State, 107.

Tobacco.—In 1936 the commercial tobacco crop of Canada amounted to 46,084,000 lb. from 54,965 acres, as compared with 54,473,000 lb. from 46,870 acres in 1935. The farm value of the tobacco crop for 1936 is estimated at \$9,420,200 as compared with \$10,762,500 for 1935.

Table 29 lists the acreages, quantities produced, and average yields per acre for the years 1927-36. Census figures from 1900 to 1921 and annual figures from 1921 to 1926 were given at p. 284 of the 1934-35 Year Book. For further details, see the March number of the Monthly Bulletin of Agricultural Statistics.

Apiculture.—The data on beekeeping in Canada for the years 1935 and 1936, as given in the following table, have been furnished by the provincial Departments of Agriculture and compiled in consultation with the Dominion Apiarist. The estimates for Ontario have been compiled on a new basis and are not strictly comparable with estimates published for the years prior to 1933. Values are as quoted

by the provincial Departments and represent for the most part average wholesale prices; for British Columbia, the values, as in previous years, have been calculated on what is considered a fair average of the wholesale and retail prices.

Statistics of beeswax, where not furnished by the provinces, have been estimated at 1.5 p.c. of the honey crop and valued at the average price of 25 cents per lb. in 1936 and 27 cents per lb. in 1935.

Table 31 shows for Canada, by provinces, the numbers of beekeepers, numbers of hives, average production per colony, and the production and values of honey and wax for the years 1935 and 1936. Production in 1936 showed an increase of 16 p.c. in volume and 17 p.c. in value.

Figures of honey production, as at the Censuses of 1921 and 1931, were given at p. 285 of the 1934-35 edition of the Year Book.

Subsection 7.—Farm Labour and Wages.

Average Wages of Farm Help.—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929 there was little change. The years 1930 to 1933 showed continuous marked reductions in average values of yearly wages and board, following the downward trend of the prices of farm produce. From 1934 to 1937 slight increases were registered.

In Table 32 the values of wages and board are given for the years 1914, 1920, 1930, and 1935-37, both for the summer season and for the year, distinction being made in all cases between wages and board.

32.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1935-37.

NOTE.—M=Males. F=Females.

Subsection 8.—Prices of Agricultural Produce.

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flaxseed, and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from August, 1935, to December, 1937, in Table 33. The average monthly prices of flour, bran, and shorts at Montreal, Toronto, Winnipeg, Minneapolis, and Duluth for 1937 are given in Table 34.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg, and Edmonton are given for 1936 in Table 35 and the average monthly prices in 1937 at these centres and at Calgary in Table 36.

33.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Rye—basis in store at Fort William and Port Arthur—Aug., 1935-Dec., 1937, and Yearly Average Prices for crop years ended July 31, 1926-37.

Index Numbers of Agricultural Prices.—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers of prices have been calculated for each crop and for the field crops as a whole. The results of these calculations using the year 1926 as the base period, are presented in Table 37. In addition to the price indexes shown here, index numbers have been calculated of the yields of the various crops from year to year, and, by a combination of the prices and yields, index numbers of the value of all field crops, weighted according to quantities, have been obtained. Indexes of yield and value are not shown here, owing to lack of space, but appear at pp. 30-32 of the Monthly Bulletin of Agricultural Statistics, January, 1938.

37.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1915-37.

NOTE.—Average prices, 1926=100. For the formulas used in the calculation, see Monthly Bulletin of Agricultural Statistics, January, 1937, p. 28.

¹ Most of the figures for 1936 have been revised since the publication of the 1937 Year Book.

² Subject to revision.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43.1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, partly owing to the fact that climatic conditions did not favour high yields in these years.

During the next two years there was considerable improvement in the prices of these field crops. Fodder and hay prices rose materially because of short crops and good demand. The general index rose from 43.1 in 1932 to 67.4 in 1934. The decline to 55.9 in 1935 was mainly due to increased production and consequent lower prices of coarse grains and forage crops, while sharply increased prices, especially for the grain crops, brought the index up to 80.9 for 1936, the highest point since 1929.

Subsection 9.—Agricultural Statistics of the Census.

A summary of the more important agricultural statistics compiled from the Census of 1931 was published at pp. 295-301 of the 1934-35 edition of the Year Book. The review included statistics of tenure of farms; farm values; mortgage indebtedness; farm expenditures; farm population; farm workers; and cost of labour, farm machinery, and facilities. In the 1937 edition of the Year Book, further statistics were presented at pp. 270-273 which showed for the Prairie Provinces, comparative figures of population, farm holdings, areas, and values, the condition of farm land, the numbers of live stock, and the acreages of the principal crops, for each of the census years 1936, 1931, 1926, 1921, and 1911.

Subsection 10.—Miscellaneous Agricultural Statistics.

Agricultural Irrigation.—*Alberta.**—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation, and other purposes, and the granting of licences

* Revised by L. C. Charlesworth, Director of Water Resources, Edmonton, Alberta.

for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 38 gives statistics of the larger irrigation projects in Alberta for the years 1935 and 1936.

The Canadian Pacific Railway Co. has constructed three large projects known as the Eastern, Western, and Lethbridge sections, the last-named being the oldest irrigation project in Alberta. In 1935 the interests of the Company in the Eastern project were transferred to the water contract holders, who are now operating under the name of the Eastern Irrigation District. By agreement with the Canadian Pacific Railway Co., the Taber, Magrath, and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

The total irrigable area served by the Canada Land and Irrigation Co.'s project is 130,000 acres, while the New West Irrigation District, by agreement with the Canada Land and Irrigation Co., receives a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there are approximately 360 privately-owned projects in Alberta, with a possible irrigable area of 56,724 acres.

*British Columbia.**—The surface waters of British Columbia are vested in the Crown in the right of the province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act and the Ditches and Watercourses Act. The administration of the Acts is vested in the Comptroller of Water Rights and the Water Board, the latter comprising a Chairman, the Comptroller of Water Rights and the Chief Engineer of the Branch.

Licences to use water for irrigation are issued by the Comptroller of Water Rights, and since 1858, when the first right to use water was given, upwards of 9,000 irrigation licences have been issued.

* Revised by J. C. MacDonald, Comptroller of Water Rights, Department of Lands, Victoria, British Columbia.

There are several forms of organization operating irrigation systems in British Columbia, and Table 39 gives statistics of the larger irrigation projects for the year 1937.

Average Values of Farm Lands.—Statistics showing the average values of farm lands in Canada in 1910 and from 1919 to 1937, are given in Table 40. The values are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929, and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

40.—Average Values per Acre of Occupied Farm Lands¹ in Canada, as Estimated by Crop Correspondents, 1910 and 1919-37.

¹ Orchards and fruit lands, 1937, with 1936 in parentheses: Nova Scotia \$96 (\$94); Ontario \$89 (\$88); British Columbia \$261 (\$266). ² Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

Subsection 11.—International Agricultural Statistics.

World Production of Cereals and Potatoes.—Table 41, constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn, and potatoes for the years 1936 and 1937 in countries of the Northern Hemisphere, and for the years 1936-37 and 1937-38 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1931-35 (1931-32 to 1935-36), and the areas and yields of 1937 (1937-38) are compared in percentages with those of the five-year period.

¹ Most of the figures for 1936 have been revised since the publication of the 1937 Year Book.

² Not available.

³ In the Southern Hemisphere the annual statistics are for the crop years 1936-37 and 1937-38, and the averages are for the period 1931-32 to 1935-36.

⁴ Early potatoes.

World Exports and Imports of Wheat and Flour.—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1937, with comparative figures for the previous crop year, are shown in Table 42. This information is taken from data published by the International Institute of Agriculture. During the crop year 1936-37, a total of 670,458,500 bushels of wheat and wheat flour expressed in bushels of wheat is shown as exported, as compared with 598,736,000 bushels in the previous year.

42.—Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1936 and 1937.

World Live Stock.—The statistics of Table 43, compiled from data published by the International Institute of Agriculture, show as nearly as possible the world situation with regard to live stock about 1935. For many countries, the figures are the result of careful enumeration, while for others they represent only approximate estimates. In the cases of Mexico, Argentina, Chile, and Kenya, the figures are for 1930, as are also those for horses in Uruguay, the Union of South Africa, and Santo Domingo, those for swine in Uruguay and Santo Domingo and those for cattle in the latter country. Earlier figures are: Peru (1929); Bulgaria (1926); Venezuela (swine, 1925; cattle, 1922; horses and sheep, 1921); Santo Domingo (sheep, 1924); Siam (swine, 1921).

CHAPTER IX.—FORESTRY.*

NOTE.—A short article on "Physiography, Geology and Climate as Affecting the Forests" was published at pp. 311-313 of the 1934-35 Year Book.

Section 1.—Forest Regions.

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic, and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The following principal regions are described separately: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane, and Coast. For descriptive purposes, it is convenient to consider two sections of the Boreal Region as separate entities, and they are described hereunder as the Northern Transition, and the Aspen Grove Sections.

The Acadian Forest Region.—This region includes all of the provinces of Nova Scotia and Prince Edward Island, and all but the northwest corner of New Brunswick. Its climate is characteristic of maritime regions, and is highly favourable to tree growth. Annual precipitation averages about 40 inches. Topography and geology are widely varied. In northern New Brunswick the maximum altitude is 2,700 feet above sea-level, and northern Cape Breton island and parts of Nova Scotia are fairly rough. The surface of the remainder of the region varies from level to gently rolling.

There is a general coniferous character to the region, especially in the northern parts of New Brunswick and Cape Breton island. Mixed forests, interspersed by so-called "hardwood ridges", are common, however, occurring more frequently in the southern parts of New Brunswick and Nova Scotia.

Among the coniferous species red spruce is the characteristic dominant, and is usually associated with balsam fir. White and black spruce, and white and red pine, are widely distributed. Jack pine occurs in pure stands on sandy plains. Hemlock, which is still to be found in most parts of the region, is believed to have been much more important in previous times. Other characteristic conifers are cedar and tamarack.

Yellow birch, maple, and beech occur in fairly large quantities and usually occupy well-drained ridges. White birch and poplar are found in association with the coniferous species. Among the other hardwoods are oak, butternut, basswood, ash, and elm.

The Great Lakes-St. Lawrence Forest Region.—This forest, centring on the Great Lakes system, and extending eastward down the St. Lawrence valley, is of an irregular character. It occupies a middle position between predominantly coniferous forests to the north and the deciduous forests to the south. Precipitation varies from an annual average of 25 inches in the west to 45 inches in the east, and

* Material in this chapter has been prepared by R.G. Lewis, B.Sc. F., Chief of the Forestry Branch of the Dominion Bureau of Statistics, in co-operation with Roland D. Craig, F.E., of the Dominion Forest Service of the Department of Mines and Resources. Section 1 is based on Dominion Forest Service Bulletin No. 85, "A Forest Classification for Canada", by W. E. D. Halliday. The Forestry Branch of the Bureau of Statistics collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry, and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications, see Chapter XXIX.

the growing season is from 100 to 150 days. Good forest soils of sedimentary origin are common, but southward extensions of the granitic areas of the Canadian Shield are also included within the boundaries of the region.

The characteristic species are white pine, red pine, and hemlock, associated with the maples, yellow birch, and, in some sections, beech and basswood. Aspen, cedar, and jack pine are widely distributed, and spruce and balsam fir are common in certain localities. Among the less widely distributed hardwood species are white birch, elm, hickories, white and black ash, oak, ironwood, butternut, and black walnut.

The pine forests of the Ottawa valley and Algonquin areas have been famous as one of the greatest of Canada's lumbering areas. Elsewhere in the region, forests of mixed type predominate, with a considerable proportion of pure hardwood stands in the more favoured locations towards the south.

The Deciduous Forest Region.—This region in Canada consists of a small northerly intrusion from the great forest of the same type in the United States, and occupies the southwestern portion of what is commonly referred to as the Ontario peninsula. It enjoys very favourable climatic and soil conditions which permit of the growth of a number of tree species not found elsewhere in Canada. Because of its fertile soil, the area is completely settled, and the forests are now represented only by woodlots, parks, and small wooded areas on the lighter soils.

Among the characteristic trees are beech and sugar maple, together with basswood, red maple, and several oaks. Coniferous species are largely represented by scattered specimens of white pine, hemlock, and juniper.

Among the less common hardwoods, which occur singly or in small groups, are hickories, black walnut, chestnut, tulip tree, magnolia, mulberry, sycamore, sassafras, black gum, Kentucky coffee tree, and a number of other species which find their northern limit in this region.

The Boreal Forest Region.—This region covers the greater part of the land area of Canada. It stretches unbrokenly from the Atlantic coast of Quebec westward to Alaska. Along its southern side it follows the limits of the Great Lakes-St. Lawrence Region, then skirts the open grasslands of the Prairie Provinces, and is terminated in the west in the foothills of the Rocky mountains. To the north it is bounded by the limits of tree growth.

The principal trees of the region are white and black spruce, balsam fir, poplars, white birch, and jack pine. Near the foothills of the Rocky mountains the latter species is replaced by lodgepole pine. In Quebec and Ontario, and as far west as a line running from lake Winnipeg to lake Athabaska in the Prairie Provinces, the region is, for the most part, underlain by granitic rocks of the Precambrian formations known as the Canadian Shield. Within the area described there are extensive tracts of good soil, formed from glacial or sedimentary deposits, but a larger portion of the region is characterized by shallow soils. Very considerable areas of bare rock testify to the disastrous results of forest fires followed by erosion. The forests of this part of the region are mainly coniferous, with black spruce and balsam fir as dominants, and are valuable chiefly for pulpwood.

West of lake Winnipeg the same tree species are in evidence but in different proportions. Here the soil is deep and relatively fertile, and the characteristic forest is a mixture of poplar and white spruce.

The climate of the region is severe, and precipitation ordinarily varies from 15 to 30 inches annually, although these amounts are exceeded in eastern Quebec.

The Northern Transition Section.—This area is a part of the Boreal Region, but is described separately because none of its forests is of commercial value although of considerable local economic value. It represents a transition from the merchantable forests of the south to the treeless wastes of the far north. White and black spruce, larch, and birch are the principal tree species, and these are usually of stunted growth because of the severity of the climate. In river valleys and other protected sites occasional clumps of trees of fair size are to be found. The principal economic value of the forests probably consists in the habitat which they provide for fur-bearing animals, and the wood they furnish for fuel and buildings for the scattered inhabitants of the region.

The Aspen Grove Section.—This section, which lies entirely within the Prairie Provinces, is also a part of the Boreal Region, but has very special characteristics. It is a zone of transition between the true forest region to the north and the open grasslands to the south. Aspen is the dominant tree, and is in sole possession of most of the area. In southern Manitoba stands of bur oak are found, and elm and ash occur singly or in small groups in river bottoms. Most of the area is farmed and much of the forest is now in the form of woodlots.

The Sub-Alpine Forest Region.—This is essentially a coniferous forest extending from the grasslands of the prairies and the western border of the Boreal Region up the east slopes of the Rockies to timber-line. This same type of forest reappears in a narrow strip extending northwesterly from the International Boundary between the plateaux of the Montane Region and the non-forested tundra formation of the mountain tops of the Coast ranges.

In general, this forest formation occupies areas from 3,500 to 6,000 feet above sea-level. Rainfall is moderate, temperatures are low, and the growing season is short. The topography is mountainous with steep-sided valleys, and the soils are mostly derived from glacial and other residual material. The dominant tree species are Englemann spruce and alpine fir, lodgepole pine, and aspen. Less widely distributed are mountain hemlock, alpine larch, and white-barked pine.

The Columbia Forest Region.—This region, often referred to as the Interior Wet Belt of British Columbia, supports forests which are somewhat similar in composition to those of the Coast Region.

The forests properly attributable to the Columbia Region comprise stands in the valleys of the Columbia and other rivers which lie between elevations of 2,500 feet and 4,000 feet above sea-level. Below this range occurs the Montane Region, and above it the Sub-Alpine. The climate is intermediate between those of the Coast and Montane Regions. The precipitation varies from 30 to 60 inches. The region should actually be mapped as a series of 'islands' and 'stringers' surrounded by patches of Sub-Alpine forest; but it is impracticable to do this on so small a scale as is used for the map facing page 284.

Some authorities consider the Columbia Region to be merely an extension of the Coast Forest Region. Because of the complete physical separation of the two regions in Canada, and also because of important differences in environmental conditions, the division made here has been adopted.

The principal species in this region are Englemann spruce, western red cedar, western hemlock, and Douglas fir. Among other species of considerable importance are alpine and grand firs, western white pine, and western larch. Lodgepole pine commonly replaces stands destroyed by fires. Black cottonwood is found on rich alluvial soils.

The Montane Forest Region.—This region forms part of what is often termed the Interior Dry Belt of British Columbia. It occupies an extensive series of plateaux, valleys, and ranges in the interior of the province, which extends northward from the International Boundary to the valley of the Skeena river. The climate is relatively dry, with low summer rainfall, and moderate to high temperatures. The dryest conditions are found in the lower river valleys, where the forest gives way to open grassland.

The principal tree species are ponderosa pine, Douglas fir, lodgepole pine, and aspen. Towards the northern limits of the region ponderosa pine disappears and associations of Douglas fir and lodgepole pine become dominant. Towards the north and east, stands of Engelmann spruce and alpine fir grade into the forests of the Sub-Alpine and Columbia Regions. Aspen is an important constituent of the northern parts of this forest.

The Coast Forest Region.—This region includes the western slope of the Coast and Cascade mountains and the insular system, the higher elevations of which form Vancouver island, the Queen Charlotte group and other islands along the coast.

The climate in this region is mild and equable, with heavy precipitation varying from 40 to 200 inches per annum, about 70 p.c. of which falls during the autumn and winter months. These conditions are conducive to the luxurious growth of coniferous forests, and produce the largest trees and the heaviest stands in the Dominion.

The dominant trees are western hemlock and western red cedar. Associated with these are Douglas fir in the south and Sitka spruce in the north. All four of these species, of which the most important commercially is Douglas fir, grow to large sizes, and occasionally are found in stands running up to 100,000 ft. b.m. per acre. Other conifers which occur in the region but are of much less importance include yellow cedar; mountain hemlock; amabilis, grand, and alpine firs; and western white pine. Of the broad-leaved trees, several alders are widely distributed, and Garry oak and madrona are found in the vicinity of the straits of Georgia. Broad-leaved maple and vine maple occur at low elevations in the southern sections, and black cottonwood, which is perhaps the most important hardwood from the commercial point of view, is found on alluvial soils in the valleys.

Section 2.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with that of about two dozen species of conifers.

For descriptions of the individual tree species, the reader is referred to pp. 283-286 of the Canada Year Book, 1936, where the chief tree species were covered, and to Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, where the subject is treated in detail.

Section 3.—Forest Resources.

Areas.—The total land area of Canada, revised according to the latest surveys, is estimated at 3,466,556 square miles, of which 549,700 square miles is considered as being suitable for agricultural or pastoral purposes. About 254,873 square

miles of this agricultural land is occupied and of this 213,236 square miles is classified as improved and under pasture and 41,637 square miles as forested.

On p. 60, the area of forested lands is shown in detail. It will be seen that the total area covered by existing forests is 1,223,522 square miles, including 41,637 square miles of occupied agricultural land still forested. Most of this will, no doubt, be left under forest cover in the form of farmers' woodlots. There is also a considerable area of forest land which is of agricultural value and will eventually be cleared, but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilized for forest production. The accessible and productive forest area is estimated to be 769,463 square miles, of which 360,548 square miles carries timber of merchantable size and on 408,915 square miles there is young growth which, if protected from fire, will eventually produce merchantable timber. The remaining area of 454,059 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever-increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, some of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 442,354 square miles is producing softwood or coniferous timber, 221,138 square miles mixed softwoods and hardwoods, and 105,971 square miles hardwood or broad-leaved species.

In Canada as a whole about 10.5 p.c. of the total forest area has been permanently dedicated to forest production. The distribution of Dominion forest experimental areas, provincial forests, provincial parks and national parks, by provinces, is shown in the following statement.

FOREST RESERVES AND PARKS IN CANADA, 1938.

¹ Of this area 286-39 square miles have been placed under provincial park regulations. ² Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve.

Of the total forest area, 8.5 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 12.9 p.c. of the area, but has alienated the right to cut timber thereon under lease or licence. So far 78.6 p.c. has not been alienated in any way. It may be said that 91.5 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

Volume of Standing Timber.—In 1935, the total stand of timber in Canada was estimated to be approximately 273,656 million cubic feet, of which 222,076 million cubic feet was of coniferous species and 51,580 million cubic feet of broad-leaved species.

During the ten years 1926-35, the average annual depletion due to use was approximately 2,034 million cubic feet of conifers and 547 million cubic feet of hardwoods. The average annual loss from fire was estimated at 241 million cubic feet of conifers and 26 million cubic feet of hardwoods. The loss from attacks of insects and fungi can only be estimated in a broad way, but it is placed at 700 million cubic feet annually for the ten-year period. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Caspe peninsula the spruce saw-fly has become a serious menace, spreading to New Brunswick and as far west as Ontario. The total annual depletion during the ten-year period was, therefore, estimated to have been about 3,558 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory, data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. The Forest Service of the Department of Mines and Resources acts as a clearing-house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and the Maritime Provinces. The inventories for Manitoba and New Brunswick have been completed. The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in New Brunswick, Quebec, Ontario, Manitoba, and Alberta.

Under present conditions it is estimated that 133,290 million cubic feet of conifers and 36,853 million cubic feet of hardwoods can be considered as accessible.

Section 4.—Forest Administration.

Subsection 1.—Administration of Dominion and Provincial Timber-Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 87 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick over 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces exclusive of National Parks and Indian reserves is as follows: Quebec, 8 p.c.; Ontario, 3.3 p.c.; Manitoba, 9.1 p.c.; Saskatchewan, 7.6 p.c.; Alberta, 7.7 p.c.; and British Columbia, 8.4 p.c. In all cases timber-lands are now

administered by the provinces in which they lie. As new regions are explored their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

The administration of forest lands under Dominion control and those under the control of each of the provinces is reviewed below.

Forest Lands Under Dominion Control.—The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, the Lands Registry Office administers the timber in Yukon and the Northwest Territories, and the Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

Forest Lands Under Provincial Control.—*Nova Scotia.*—In this province, 10,473 square miles, about 87 p.c. of the forest land, is privately owned. The Crown timber is administered by the Minister of Lands and Forests, with a Chief Forester in charge of protection, surveys, etc. Timber-cutting leases are granted by special agreements.

New Brunswick.—The Forest Service, under the Department of Lands and Mines, administers the forests in New Brunswick. At present timber-lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns, and individuals, who now own in fee simple about 11,100 square miles of forest land.

Quebec.—The Forest Service of the Department of Lands and Forests administers the timber-lands in Quebec. Its powers include classification of land, disposal of timber and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 31,048 square miles of forest land. Forest reserves cover 31,320 square miles and provincial parks 5,099 square miles.

Ontario.—Forest administration is carried out in Ontario by the Department of Lands and Forests, under a Minister, Deputy Minister, and Provincial Forester.

In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. The licensees usually undertake to erect a pulp-mill or a paper-mill within the province, the type and size of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,606 square miles, and the provincial parks 4,248 square miles.

Manitoba.—The Forest Service of the Department of Mines and Natural Resources has administered the forests of Manitoba since 1930. A provincial Air Service is operated under the direction of the Provincial Forester, and is mainly

used for purposes of forest fire protection. Six forest reserves, containing 3,775 square miles, are permanently reserved for the production of forest products. Timber is disposed of by licence or timber sale, and large numbers of timber permits, covering small quantities of wood, are issued annually to settlers and others. One pulp and paper mill is in operation in the province. The area of privately-owned forest land is estimated to be 8,500 square miles.

Saskatchewan.—The forests of Saskatchewan are administered by the Department of Natural Resources. The organization is unique in Canada, because the different resources are not controlled by different branches of the Department. Instead, each field officer handles matters pertaining to all resources within his district. Forestry affairs of the Department are controlled by the Director of Forests. Timber disposal is carried out under licence, sale, and permit. An Air Service is maintained, mainly for forest protection purposes. Forest reserves occupy 10,043 square miles and provincial parks 258 square miles. Privately-owned forest land is estimated to be 6,250 square miles.

Alberta.—The Forest Service of the Department of Lands and Mines administers and protects the provincial forests. Timber is disposed of through licences and permits except on forest reserves, where timber sales are disposed of but licensed berths are not. The area in forest reserves is 14,347 square miles, and 10,044 square miles of forest land are privately owned.

British Columbia.—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber-lands since 1912. All unalienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to the former purpose, and all timber-lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the past few years 24,803 square miles have been set aside permanently for forest purposes. Provincial parks include 2,727 square miles. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 15,000 square miles of timber-land are privately owned.

Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks, the Forest Experiment Stations, and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands now rests with the provinces. Up to the end of the fire season of 1930, the Forest Service of the former Dominion Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan, and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber-lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate

purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule, aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback, and foot patrol for the detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires. A ground staff is also necessary for the maintenance in the forest of fire lanes, fire guards, and systems of communication and transportation.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pump. These pumps, each of which weighs from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack-saddle or back-pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, to a much greater distance. Small hand pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine which has a circulation of over 16,000, by railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the

schools, by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest fire hazard which is expressed in the form of an index computed from the weather factors. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing hazard at any given time, but, by the aid of weather forecasts, they can anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

Subsection 3.—Scientific Forestry.

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by Provincial Governments on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 400 technically-trained foresters are employed by the Dominion or provincial forest services or by paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. A considerable number of foresters are actively engaged in commercial logging operations.

Dominion Forest Service.—The activities of the Dominion Government in forest research are centred in the Dominion Forest Service, which is a bureau of the Lands, Parks, and Forests Branch of the Department of Mines and Resources. Until the time of transfer of the natural resources of the Prairie Provinces, and the Railway Belt and Peace River Block in British Columbia, to provincial control in 1930, the Forest Service was primarily concerned with the administration of forest reserves and the protection from fire of all forests on Crown lands. In addition silvicultural research work had been carried on at the Petawawa Experiment Station in the Ottawa valley since 1918. Since the transfer of the resources, the Service has been entirely devoted to investigations in the fields of forest economics, silvicultural research, forest protection research, and forest products research.

In co-operation with the provincial forest authorities, the Forest Service assembles the available information respecting the forest resources of the Dominion in order to prepare a national forest inventory. Such material is revised every five years and published in reports entitled "The Forests of Canada", which are submitted to the quinquennial British Empire Forestry Conferences. Besides

giving assistance to certain provinces in the preparation of their inventories, the Service is developing improved methods in interpreting the valuable forestry data contained in aerial photographs. The Economics Division also assembles data and issues reports on forest revenues and expenditures, the production of forest industries, the employment of labour, and trade in forest products.

Five forest experiment stations, where investigations of the underlying principles governing the growth of forests can be made, and where practical methods of management can be tested, are now in operation. Besides the original station at Petawawa, new establishments, opened since 1930, include the Acadia station near Fredericton, N.B.; the Valcartier station near Quebec; the Duck Mountain station in Manitoba; and the Kananaskis station in the foothills west of Calgary. The total area of the five stations is approximately 238 square miles. These stations, or experimental areas, are used for forest fire-hazard research as well as for silvicultural work, and also form centres from which investigations can be conducted in other areas in the regions in which they are located.

One of the principal problems now exercising the minds of all who are interested in the future welfare of our forest resources concerns the present condition and future prospects of forest areas which have been cut or burned. The Forest Service is conducting a special series of investigations into this question in co-operation with the provinces and timber owners.

Forest Products Laboratories.—In order to promote the more efficient use of the forest resources of Canada and at the same time assist the wood-using industries in the more technical problems encountered in their manufacturing operations, the Forest Products Laboratories of Canada were organized in 1913 under the Forest Service of the former Department of the Interior. The need for them was felt because of the influence of the establishment of such laboratories in other important timber-growing countries. Besides, on account of Canada's large exports of timber and timber products, it became increasingly apparent that, in order to meet world competition in the timber trade, it was necessary that Canada keep fully abreast of other countries in scientific developments in wood utilization.

For several years the Laboratories carried on all their work in Montreal, under an arrangement with McGill University. The subsequent development of their work has necessitated the establishment of a branch laboratory in Vancouver in a building provided by the University of British Columbia, the transfer of the main Laboratories to Ottawa, and the establishment of the Pulp and Paper Division of the Laboratories in Montreal in a building erected by the Canadian Pulp and Paper Association. In this building are also housed the executive offices of the Association and certain laboratories of McGill University devoted to research in cellulose and related products. The Pulp and Paper Association, in addition to providing accommodation for the Laboratories, makes a yearly grant to the Laboratories to assist in financing the work, and through a Joint Administrative Committee, consisting of representatives of the Government and the Association, takes an active part in formulating and forwarding the work of the Division. Close co-operation is also maintained with McGill University.

The main Laboratories in Ottawa carry out work in timber mechanics, wood fabrication, wood preservation, lumber seasoning, timber pathology, wood structure, wood identification, wood chemistry and general wood utilization; they also co-operate with other Government Departments and industrial organizations in timber marketing problems. In addition, the Ottawa Laboratories carry out many investigations in connection with logging problems of the pulp and paper industry.

The Vancouver Laboratory devotes attention to special problems relating to Pacific Coast timbers which require local treatment and which cannot be carried out to advantage in the main Laboratories on account of distance or for other reasons.

A research committee of the Canadian Lumbermen's Association was set up several years ago to effect liaison between the industry and the Laboratories and make as effective as possible the application of researches carried out by the Laboratories in the problems of the lumber industry.

Since the Laboratories were established, many advances have been made in the technique of wood utilization. Improvements have been made in treating railway ties, telephone poles, mining timbers, and other structural timbers with creosote, water-soluble salts, and other chemicals. This has enhanced the value of wood as a permanent structural material and permitted its use for a variety of purposes for which it is otherwise unsuitable. The work carried out in the treatment of hardwoods, especially birch, beech, and maple, has been of particular value. Reductions in the cost of manufacture of pulp and paper, and improvements in quality of products have resulted from researches of the Laboratories. Of particular interest has been the development in the Pulp and Paper Laboratory of the Canadian Standards Freeness Tester and the Johnston Fibre Classifier. Valuable work has also been carried out in the manufacture of groundwood pulp and in the pulping of resinous woods and hardwoods.

The study of the significance of discolouration in timber, as for example in jack pine, red cedar, and Douglas fir, has been responsible to a considerable degree in curtailing rejection of such material. Researches carried out in the spraying or dipping of timber, notably the sapwood of the pines, with chemicals which are toxic to wood-staining organisms have assisted in curtailing losses on this account, which in some years amounted to as high as one million dollars.

Through researches carried out in the Laboratories and at wood-working plants important advances have been made in seasoning both in the open air and in experimental dry-kilns. This work has been particularly valuable in both Eastern and Western Canada in connection with export markets which are becoming increasingly critical of specifications. The work carried out has been of significance to exporters of both softwoods and hardwoods.

Mechanical and physical tests have been carried out on nearly all important Canadian commercial species of timber according to practices which have been adopted by laboratories of countries of the British Empire and the United States. A great deal of work has also been carried out on large structural timbers. This information has been widely used by Canadian engineers and has formed the basis for the revision of city building codes. It has also been made the basis for Canadian standard grades for all species of Canadian woods of structural importance which have been set up by the Canadian Engineering Standards Association.

Close co-operation is maintained between the Laboratories and the Commercial Intelligence Service of the Department of Trade and Commerce through its Trade Commissioners. The Laboratories also co-operate closely with the Dominion Department of Public Works in all its timber structures and with other Dominion Departments, notably Agriculture, National Defence, and Transport; also with Canadian railway companies and other large public utility organizations.

Universities and Other Agencies.—Education in forestry and opportunities for research are offered by four Canadian universities. The University of Toronto, the University of New Brunswick, and the University of British Columbia provide four-year courses leading to a professional degree. The School of Forestry and

Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Duchesnay by the Quebec Forest Service.

A provincial forest experiment station of six square miles is maintained by the Quebec Forest Service at Duchesnay, near Quebec city, and the British Columbia Forest Branch has four such stations, totalling fourteen square miles and located at Aleza lake, Campbell river, Cowichan lake, and Green Timbers.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and windbreaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 125,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry. It provides trees for sale and distribution in the province, comprising seedlings and transplants for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision is made by legislation for the creation of communal forests and there are now 76 of these, covering 594,059 acres.

Section 5.—Forest Utilization.

A short historical sketch of forest utilization in Canada appears at p. 325 of the 1934-35 Year Book and an article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., will be found at pp. 318-323 of the 1925 edition of the Canada Year Book.

Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of

connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is, therefore, almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in some cases by motor trucks. These operations are more or less independent of frost, snow, or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, subcontractors and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but sawlogs, being as a rule the property of the mill owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit-holders, who cut and sell logs on the market. In many cases mill operators are not limit-holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior, and other plants but that they also provide logs, pulpwood, and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling, and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss, and tanbark, which all go to swell the total.

Table 2 gives the total values of the products of woods operations in Canada for the years 1931 to 1935, inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1934-37, are shown in Tables 12 and 13 of the chapter on External Trade.

2.—Values of Woods Operations, by Products, 1931-35.

Totals.....	141,133,930	92,106,252	93,773,142	105,539,732	115,461,779

It has been estimated that operations in the woods in Canada in 1935 involved the investment of \$131,000,000 in logging equipment, gave employment for a part of the year equivalent to 79,000 man-years, and distributed over \$60,000,000 in wages

and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1935, due to consumption for use, amounted to 2,440,809,000 cu. ft. of standing timber. To this total must be added the volume of material destroyed by fire, insects, and fungi, which would bring the average annual depletion to more than four billion cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber and the estimated value in each case for 1935, with totals 1924-35. Table 4 shows the extent of the drain on our forest resources in 1934 and 1935, by provinces.

Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste, and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greenville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritt in the Niagara peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, after which there was a steady recovery, resulting in a second peak in 1929 of \$243,970,761. This was followed by annual decreases down to 1933 and annual increases up to 1936.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United States. Summary statistics for the combined pulp and paper industry are given on p. 304.

There are to-day three classes of mills in the industry. These, in 1936, numbered 25 mills making pulp only, 44 combined pulp and paper mills, and 24 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp, and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp mills except under special permit. The pulpwood which is exported to the United States is, therefore, largely cut from private lands. Table 5 shows the annual production of this commodity from 1926 to 1936, together with the quantities used by Canadian pulp-mills and the quantities exported and imported.

In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form, but by 1916 the proportion had declined to two-fifths. Since 1930 the proportion exported has been less than one-fifth.

5.—Production, Consumption, Exports, and Imports of Pulpwood, calendar years 1926-36.

NOTE.—Figures for the years 1908-25, inclusive, will be found at p. 288 of the 1931 Year Book.

¹ Exports of pulpwood in the calendar year 1937 were 1,542,553 cords.

² None reported.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves, and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.

Pulp Production.—Table 6 shows the total production of pulp in Canada from 1927 to 1936, inclusive, together with the production of groundwood pulp and the production of fibre by the chemical processes described.

The growth of this industry was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 at 2,150,251 tons, more than overtook the previous year's drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932 since when steady increases have been recorded resulting, in 1936, in a new record of 4,485,445 tons.

6.—Pulp Production, Mechanical and Chemical, calendar years 1927-36.

NOTE.—Figures for the years 1908-26, inclusive, will be found at p. 293 of the 1931 Year Book.

¹ Some of these totals include unspecified pulp.² Including screenings.³ Revised since the publication of the 1937 Year Book.

During 1936 there were 25 mills manufacturing pulp only and 44 combined pulp and paper mills. These 69 establishments turned out 4,485,445 tons of pulp, valued at \$92,336,953, as compared with 3,868,341 tons of pulp, valued at \$79,722,039 in 1935. Of the 1936 total for pulp, 3,558,545 tons, valued at \$55,713,784, were made in the combined pulp and paper mills for their own use in manufacturing paper. Of the remainder, 166,838 tons, valued at \$6,137,570, were made for sale in Canada, while 760,062 tons, valued at \$30,485,599, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 64 p.c. of the production in 1936 was groundwood pulp and 16 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, and soda fibre made up the remainder, with groundwood and chemical screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the latest eight years.

¹ Includes production in British Columbia, Manitoba, New Brunswick, and Nova Scotia.

Pulp Exportation.—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1936. Figures for 1913, the year immediately preceding the War, and for 1935 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1934-37, will be found in Table 12 of the chapter on External Trade. In the calendar year 1937 the exports of wood-pulp from Canada were 870,715 tons. The total exports of the eleven principal pulp-exporting countries of the world in 1936 were 6,837,884 short tons, of which Canada contributed about 11 p.c.

Paper Production.—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for 1917 to 1936. Figures for 1927-36 are given in Table 9.

During 1936 there were 44 combined pulp and paper mills and 24 mills making paper only. These 68 establishments produced 3,807,329 tons of paper, with a total value of \$147,854,652, as compared to 3,280,896 tons, valued at \$129,078,386 in 1935. Newsprint paper now forms nearly 85 p.c. of the annual paper production

in Canada. In 1936, the production was 3,225,386 tons, valued at \$105,214,533, a record production for volume although its value was lower than that of 1929, the record year for value. The preliminary estimate for 1937 is 3,645,309 tons, also a record for volume.

9.—Summary of Paper Production in Canada, calendar years 1927-36.

Note.—Comparable figures for the years 1917-26 will be found at p. 334 of the 1934-35 Year Book.

¹ Includes some unspecified paper products.

Newsprint made up about 85 p.c. of the total paper production in 1936, with about 9 p.c. of paper boards, 3 p.c. of wrapping paper, 2 p.c. of book and writing paper and about 1 p.c. of tissue and miscellaneous papers.

10.—Production of Paper in Canada, by Provinces, 1936.

Province.	Quantity.	Value.
	tons.	\$
Quebec.....	1,960,905	78,921,371
Ontario.....	1,161,303	43,492,033

Nova Scotia and New Brunswick.....	364,566	13,633,419
Totals.....	3,807,329	147,854,652

Quebec produced 51 p.c. of the total quantity, Ontario 31 p.c., British Columbia 8 p.c., and Nova Scotia and New Brunswick the remaining 10 p.c.

World Production of Newsprint.—The world production of newsprint in 1936 has been estimated at 8,217,000 short tons, of which North America supplied almost 50 p.c. and Canada alone over 39 p.c. The estimated production in the

leading 24 countries, compared with 1935, and the ten-year averages 1927-36 were as follows:—

¹ A slight difference in classification accounts for the difference between these figures and those shown in Table 8.

Exportation of Newsprint Paper.—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 146,792 short tons valued at \$5,692,126. For the fiscal year ended Mar. 31, 1937, our exports of newsprint amounted to 3,144,985 tons valued at \$110,176,448 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1934-37, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and since that date her exports have increased more than nine-fold in quantity. The following table shows the exportation of newsprint from the 12 principal exporting countries in 1913, 1934, 1935, and 1936. Canada contributed to the total over twice as much as the other 11 countries combined in 1936. Canada's exports of newsprint paper for the calendar year 1937 were 3,455,240 tons.

Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries as they are frequently carried on in separate plants by entirely independent companies. For some time, however, it has been the practice of many Canadian concerns to combine the manufacture of pulp and paper in one complete establishment. In more recent years there has been a further tendency to combine in one plant the manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products. In some cases, what might otherwise be considered as three distinct industries, are carried on in one plant as three steps in the production of the finished paper article. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it impossible to separate many of the statistics relating to the manufacture of pulp, basic paper, and converted paper products. Including manufacturing operations as far as the paper-making stage, there were altogether 93 mills in operation in 1936. The capital invested amounted to \$539,350,001, the employees numbered 30,054 and their salaries and wages amounted to \$40,063,852. If we disregard the pulp made for their own use in combined pulp and paper mills and the basic paper made for their own use in combined paper and paper-converting mills, we can consider the total of materials and supplies used in the industry as a whole as amounting to \$72,202,983 in 1936 and \$57,995,037 in 1935 and the gross value of production as \$188,144,603 in 1936 as compared to \$162,651,282 in 1935. The net† value of production amounted to \$87,150,666 in 1936 and to \$81,973,352 in 1935.

The pulp and paper industry, one of the leading single manufacturing industries in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It was the leading industry in gross value of production from 1925, when it replaced the flour-mills, until 1935 when it was overtaken by non-ferrous smelting and refining. It has been second to central electric stations in net value of production and capital for some years. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$8,276,423 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward Canada's excess of exports over imports in 1936 amounted to \$143,008,660, representing the difference between exports and imports of pulpwood, pulp, paper, and paper products.

The United States market absorbs annually all but a very small part of Canada's pulpwood exports, about 85 p.c. of her pulp and 77 p.c. of her paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

* See Chapter XIV—Manufactures—for further particulars regarding the pulp and paper and paper-converting industry.

† This is the net value of production as calculated for years since 1934. It is obtained by deducting cost of power, fuel, and consumable supplies, as well as cost of materials, from gross value of production.

Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles, and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the former Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Production in 1921 decreased by over a third and the average value by over \$10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There were increases in 1933, 1934, 1935 and 1936. British Columbia now produces 59 p.c. of the total. Table 13 gives the production of lumber, lath, and shingles in each year from 1926 to 1936.

13.—Quantities and Values of Lumber, Shingles and Lath Produced in Canada, calendar years 1926-36.

NOTE.—Figures for the years 1908-25, inclusive, will be found at p. 300 of the 1931 Year Book.

1936.....	3,412,151	61,965,540	3,019,030	6,754,788	286,323	874,231

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for the cutting-up and barking or rossing of pulpwood reporting in 1936 was 3,638, as compared with 3,698 in 1935. The capital invested in these mills in 1936 was \$78,294,341, employment amounted to 28,786 man-years and wages and salaries amounted to \$21,357,038. The logs, bolts, and other materials of the industry were valued at \$44,360,624 and the gross value of production was \$80,343,291. The net production in 1936 was \$35,982,667.

The production of sawn lumber increased in quantity from 1935 to 1936 by 14.8 p.c. Lath production increased by 26.2 p.c., and shingle production decreased by 7.3 p.c. Quantity decreases were also reported in sawn ties, box shooks, veneer, heading, and a few of the minor products. Total values increased with all but shingles, ties, shooks, staves, and heading. The total gross value of production increased from \$65,905,132 in 1935 to \$80,343,291 in 1936.

¹ Includes all other sawmill products.

British Columbia came first in total production, contributing 59.3 p.c. of the total cut in lumber and 82 p.c. of the shingles in 1936. Quebec followed in second place, Ontario was third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, and is produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine, cedar, and balsam fir next in order of importance. Cedar is the most important shingle wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

Lumber Exportation.—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards, and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in the next three years reaching its lowest level in 1932. This was followed by substantial increases in 1933 and 1934, a decrease in 1935 and increases in 1936 and 1937 to 1,857,964 and 1,966,298 M ft. b.m., respectively. Of the 1937 exports 54 p.c. went to the United Kingdom and 12 p.c. to other Empire countries making 66 p.c. to the Empire as a whole. Twenty-seven p.c. went to the United States and 7 p.c. to other foreign countries making 34 p.c. to all foreign countries. The exports of lumber and square timber increased in 1937, but the exports of shingles and lath decreased in quantity, though increasing slightly in value.

Subsection 4.—Manufactures of Wood and Paper.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products, and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, and other millwork, and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats, and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks, and silos; spools, handles, dowels, and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery, and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1936 the gross value of production for all classes of manufactured products amounted to \$3,002,403,814 of which total the wood and paper group contributed \$497,103,666 or over 16 p.c. It was exceeded in this respect only by the vegetable products group with over 19 p.c. Of the ten groups of the industrial census the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 3,175, in net value of products with \$261,020,034,* and in salary and wage distribution with \$141,301,340.

*See footnote (f) p. 304.
46847—201

In few industries did manufacture add, in 1936, a higher percentage to the material used than in the wood- and paper-using industries; in the manufacture of pulp and paper this percentage was 121 and in the lumber industry 81. In the manufacture of planing-mill products this percentage was 86 p.c. For the wood and paper group as a whole the value added by manufacture in 1936 was \$261,020,034,* or 111 p.c. of the value of materials used. Further details are given in Chapter XIV—Manufactures—of the present volume.

The forests of Canada contribute substantially to her export trade values. During the fiscal year ended Mar. 31, 1937, exports of wood and paper products amounted to \$223,918,476 and made up 21.1 p.c. of the total value of exports for the period, amounting to \$1,061,181,906. Exports of wood and paper products were exceeded by those of mineral products, which made up 29.1 p.c. of the total, and agricultural and vegetable products with 45.3 p.c. Wood and paper products are prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list, with planks and boards fifth and wood-pulp eighth. The gross contribution of wood and paper products toward a favourable trade balance for Canada amounted to \$195,271,604 during the same period.

Subsection 5.—Forest Depletion and Increment.

Fire Losses.—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that more than 60 p.c. of the original forest has been burned, about 14 p.c. has been cut for use and about 25 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires. About the year 1845 vast areas west of lake Superior were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. During a period of dry years from 1883 to 1893, a series of disastrous fires destroyed immense areas of timber in eastern and northern Manitoba and in northern Saskatchewan. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately \$46,000,000. The average area burned over for the ten-year

* See footnote (f) p. 304.

period from 1926 to 1935 was slightly over 2,000,000 acres with an average annual total loss and damage of \$4,500,000.

Speaking generally, there are, annually, two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations show that, during the ten-year period from 1926 to 1935, 86 p.c. of all fires reported were due to human agencies and were, therefore, preventable. The remainder were attributed to lightning or other natural causes. Campers, settlers, smokers, and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

Losses through Insects and Fungi.—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam-fir forests in Eastern Canada. In Quebec it was estimated that 100,000,000 cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15,000,000 cords. In these regions the active state of the infestation is now practically over, but the insect is causing damage in northern Ontario and Cape Breton island. Other insects, though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During recent years dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of certain defoliating insects under certain conditions. Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Entomological Branch of the Dominion Department of Agriculture has developed this means of attack with marked success in the case of the larch saw-fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw-fly. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

Summary of Losses and Increment.—During the ten years 1926 to 1935 the average annual consumption of standing timber for use amounted to about 2,581,000,000 cubic feet. During the latest ten years, fire has destroyed annually about 267,000,000 cubic feet of merchantable timber and the young growth of various ages on 848,379 acres. The destruction occasioned by insects, fungi, and windfall is not known, but is estimated at 700,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of about 3,550,000,000 cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced in merchantable timber at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Nevertheless, extensive reproduction and rate-of-growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

This chapter is divided into three sections dealing, respectively, with: the fur trade, using that term in the sense which historical association has given it in Canada; fur farming, which follows closely the treatment formerly given the subject in the chapter on agriculture; and fur production and trade statistics, covering the total production and external trade in raw furs.

Section 1.—The Fur Trade.

Historical Sketch.—The place which the fur trade held during the French *régime* in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing, to the civilization which followed, a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the Canada Year Book, 1934-35, pp. 343-344.

Fur Resources.—In the early years of the 19th century, the exports of furs from Canada exceeded in value those of any other product. Conditions have greatly changed, but the total output has not seriously declined and Canada may still be regarded as possessing, in her northern regions, one of the great fur preserves of the world. The rapid development of the country and the opening up of the West during the later 19th and earlier 20th centuries, together with improvements in transportation and settlement, meant the exhaustion of the fur resources of the settled parts. The trade, therefore, gradually retreated to less accessible territory. More recently the development of mining on a large scale over the Precambrian Shield has forced the trapper still farther north. Decline in fur resources has, however, been accompanied by increase in demand and higher prices, the encouragement of fur farming, and the introduction of conservation measures. Nevertheless, the belt of northern Canada, which includes the whole of the Northwest Territories, the northern parts of the Prairie Provinces, and extends through northern Ontario and Quebec and into the Maritimes, remains one of the few natural reservoirs for fine furs and the fur resource of this vast area constitutes one of its major assets to-day; in fact, minerals and furs will probably remain the chief resources since much of the area is unsuited to settlement or forest growth.

The fur bearers of Canada are mostly carnivorous animals, but two very valuable rodents are included, *viz.*, beaver and muskrat. The largest fur-bearing animal is the bear—polar, along the Arctic coast and Hudson bay; grizzly, in the Rocky mountains; and black, common in wooded areas generally. Wolves are common and wide-spread—grey, black, and blue are colour varieties of the same species. Fox pelts account for more than half of the fur trade. Fur farms now supply nearly all of the silver fox pelts, while the Arctic regions provide a great number of white skins and a few blue ones. The ermine, or weasel, is fairly plentiful throughout the Dominion and is found as far north as trappers are operating. Otter, beaver, marten, fisher, and mink are furs of exceptional quality and beauty and are secured throughout the whole of the timbered parts of the northern belt. The mink is now being raised extensively on fur farms and the pelt of the ranch-bred mink is regarded as superior to that of the mink taken in the wilds.

Among the rodents, the beaver has the most valuable fur, but this animal has begun to show signs of decreasing and restrictions on the taking of beaver have been made more rigid in consequence. Muskrat is now quite highly prized and, so far as number of pelts taken is concerned, is far in advance of any other species; under the trade name of "Hudson seal", its pelt has become a favourite moderate-priced fur.

Conservation.*—The conservation of the fur bearers of Canada is a matter coming under the jurisdiction of the respective Provincial and Territorial Governments. Nevertheless, the Dominion as a whole is concerned in the conservation of fur and of all wild-life resources. It was to co-ordinate the wild-life conservation efforts of the various Dominion Departments that the Advisory Board on Wild Life Protection was organized in 1916. The Board is specially authorized to advise with respect to the administration of the Migratory Birds Convention Act and the Northwest Game Act, but has dealt with many other problems of wild-life conservation. Through conferences of provincial and Dominion officials which were convened for many years by the former Department of the Interior, but are now arranged by the Department of Mines and Resources, uniform and concerted action has been taken and the conservation of Canada's wild-life resources has been advanced. The general policy followed with regard to the fur-bearing animals has been mainly along two lines: first, to so regulate the taking of animals by limitation of catch or close season as to prevent their extinction in districts where natural conditions provide a suitable habitat; and second, to provide sanctuaries in strategic places which serve as reservoirs from which large areas of surrounding wild country may be naturally restocked.

Many of our most valuable fur-bearing animals are subject to marked fluctuations in numbers. The periods of abundance and of scarcity recur in sufficient regularity to be called cycles and they have an important bearing upon the fur trade generally and more particularly upon the well-being of a large percentage of our Indian and Eskimo population who depend upon the wild life for their livelihood. The Department of Mines and Resources, with the assistance of the Bureau of Animal Population, Oxford University, and the Hudson's Bay Company, has commenced an inquiry in the form of an annual questionnaire distributed to a number of Arctic stations with the object of endeavouring to determine the facts about each of these recurring fluctuations. It is necessary to continue this investigation from year to year because the situation is changing continuously, and it is hoped that the work will produce data from which a forecast can be made relating to the expected abundance of each important species. The study might also be suggestive of measures to prevent unnecessary depletion of any species of wild life during the periods of scarcity.

Information on the wild-life conservation activities of the provinces and territories may be secured from the chief game officials listed below: Roy A. Gibson, Deputy Commissioner, Northwest Territories, Ottawa (administers Northwest Game Act); G. A. Jeckell, Controller, Controller's Office, Dawson, Yukon; F. R. Butler, Inspector, Office of the Game Commission, 411 Dunsmuir St., Vancouver, British Columbia; W. H. Wallace, Game Commissioner, Edmonton, Alberta; Edward S. Forsyth, Game Commissioner, Department of Natural Resources, Regina, Saskatchewan; A. G. Cunningham, Director, Game and Fisheries Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba; D. J. Taylor,

* Prepared under the direction of F. H. H. Williamson, Controller, National Parks Bureau, Department of Mines and Resources, Ottawa, by Hoyes Lloyd, Superintendent of Wild Life Protection.

Deputy Minister of Game and Fisheries, Toronto, 2, Ontario; L. A. Richard, Deputy Minister of Mines, Game and Fisheries, Quebec, Quebec; Lt.-Col. H. H. Ritchie, Chief Game Warden, Department of Lands and Mines, Fredericton, New Brunswick; F. A. Harrison, Chief Clerk, Department of Lands and Forests, Halifax, Nova Scotia; W. R. Shaw, Deputy Minister and Live Stock Superintendent, Department of Agriculture, Charlottetown, Prince Edward Island.

Section 2.—Fur Farming.*

Fur farming is now recognized as an industry upon which the fur trade is becoming more and more dependent for its supplies of raw furs. In 1921 the value of pelts of ranch-bred animals accounted for only 3 p.c. of the total value of raw fur production, while in 1936 it had risen to approximately 40 p.c.

Origin of the Fur-Farming Industry.—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book, while a more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

Fur Farms of Canada.—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a branch of the operations. Although the silver fox is of chief importance, other kinds of fur-bearing wild animals are being raised successfully in captivity—mink, raccoon, skunk, marten, fisher, and fitch. The mink in particular thrives in captivity if it receives proper care, and the number of mink farms is accordingly increasing at a rapid rate. In 1936 the value of the silver foxes on the farms represented 85 p.c. of the total amount, and the value of the minks, 13 p.c., leaving 2 p.c. for all other kinds combined. In addition to the farms already mentioned, where animals are raised in rather confined quarters, many areas of marsh, stream, or lake are being operated as muskrat and beaver farms. In the case of these semi-aquatic animals, however, although the animals are usually kept within a carefully fenced area where they are given supplementary food and are protected from predatory enemies, they nevertheless live and breed under natural conditions.

For many years the fox-farming industry was expanding so rapidly, both in Canada and abroad, that the chief source of income of ranches was the sale of live animals for breeding purposes, while the production of pelts was a minor or incidental feature. Thus, in 1925, the value of live silver foxes sold was \$2,755,000, while that of silver fox pelts was only \$736,000. As the number of foxes on fur farms progressively increased, ranchers had to readjust their economy to declining values for both live animals and pelts. The industry appears to be gradually becoming stabilized on a pelt basis rather than on a live animal basis. In the latest year, 1936, the value of live silver foxes sold was only \$542,888, while that of silver fox pelts sold was \$4,950,290, and for all fur farms the sales of pelts represented 87 p.c. of the total revenue. Mink is forging ahead in importance both as to values of animals and pelts sold. For the latest two years shown the increases have been about 7 p.c. and 270 p.c., and 122 p.c. and 102 p.c., for animals and for pelts respectively, whereas over the same period the value of silver fox animals sold from farms has diminished appreciably and that of silver fox pelts has increased by only about 20 p.c. and 12 p.c.

* Revised by Miss F. A. Brown, Chief of the Fisheries, Fur, and Dairy Statistics Branch, Dominion Bureau of Statistics. This Branch publishes detailed annual reports on fur farms and on the production of raw furs.

Statistics of Fur Farms.—The earliest Dominion-wide statistics of fur farms were collected for the year 1919. Since then annual statistics have been obtained covering the chief phases of the industry. The statistics of 1919 recorded 429 fur farms with 8,326 fur-bearing animals. The wide growth of the industry since then is evident from the statistics of the tables which follow.

Table 1 shows the numbers of farms and capital investment in the industry by provinces.

1.—Numbers of Fur Farms, Values of Land and Buildings and Values of Fur-Bearing Animals, by Provinces, 1934-36.

Table 2 indicates that the numbers of silver foxes and mink, the two fur-bearing animals which have proved most readily adaptable to domestication, were higher in 1936 than in any previous year. The values of animals on fur farms, on the other hand, have been greatly affected by the decline in prices since 1929.

¹ Based on estimates furnished by the operators of the farms.

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 4 shows the sales of animals by kinds in the years 1928 to 1936 and Table 5 the sales of pelts. During late years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

Section 3.—Statistics of Total Production and Trade in Furs.

Fur Production Statistics.*—Early records of raw fur production are confined to the decennial censuses, when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements, based on royalties, export tax, etc., have been made available by the provincial game departments, and these statements are now used in the preparation of the statistics issued annually by the Bureau. In the case of Prince Edward Island, which, until the present, has been unable to furnish such annual data, the Bureau has heretofore used the returns of fur farms to supply information concerning the pelts sold. This method has been unsatisfactory, as the returns of fur farms are made for the calendar year, whereas the fur production statistics cover the 12 months ending June 30. Again in Prince Edward Island, the Bureau's list of fur farms, although inclusive of all the larger fur farms, is probably incomplete with regard to properties where not more than one or two pairs of foxes are kept. A licence is not necessary to operate a fur farm in that province and consequently no list of licensees is available. For the latest year the Prince Edward Island Department of Agriculture has furnished a statement giving the value of silver fox pelts, the product of Prince Edward Island fur farms, exported from the province during the season 1935-36, and based on data collected from the various selling agencies. The number of skins has been estimated at 62,169, this estimate being obtained by taking an average value of \$34 per pelt. The increase in fur production (almost entirely silver fox pelts) for Prince Edward Island is due to the change in the source used for the information.

The chief markets for Canadian furs are London and New York; the trade tables for the 12 months ended June 30, 1936, show that of the total of \$16,159,275 worth of raw furs exported, the United Kingdom received \$9,321,147 and the United

*Revised by Miss F. A. Brown, Chief of the Fisheries, Fur, and Dairy Statistics Branch, Dominion Bureau of Statistics.

States, \$6,015,782. At the close of the Great War, Montreal took a position as an international fur market, holding the first Canadian fur auction sale in 1920. At the sales held in Montreal during the year 1936 the pelts sold numbered 868,164, while the value amounted to \$5,397,042. Fur auction sales are held also at Winnipeg, Edmonton, and Vancouver. An important industry in Canada is the manufacture of fur goods, such as coats, capes, scarves, muffs, etc. In 1935 the number of plants so engaged was 309, and the total value of output \$12,518,670. Then there is the fur-dressing and -dyeing industry whose 13 plants in 1935 treated fur skins to the number of 5,738,920. The chief kinds of furs, with regard to number treated, were rabbit (2,736,041) and muskrat (1,131,496).

6.—Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1920-36.

¹ Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

Among the provinces, Ontario occupies first place in value of raw fur production, its output in 1935-36 being valued at \$2,649,647. The relation of the value of raw fur production in each province to the total for Canada in 1935-36 is shown by the following percentages: Ontario 17.1; Quebec 16.0; Prince Edward Island, 13.7; Alberta, 11.0; Manitoba, 8.3; British Columbia, 7.8; Northwest Territories, 7.7; Saskatchewan, 7.4; New Brunswick, 4.8; Nova Scotia, 4.4; and Yukon, 1.8. Details by provinces of the numbers of pelts produced in the two latest years are given in Table 7.

¹ The large increase in Prince Edward Island in both the number and value of pelts produced from the year 1934-35 to 1935-36 is mainly due to a change of method explained on p. 315.

The chief item of production is silver fox, practically the whole supply of which may be credited to the fur farms. The number of silver fox pelts shown for the season is 185,259, and the value, \$6,108,194. Next in order of value is muskrat, with \$2,148,605, and third is mink, with \$1,701,577. Mink farming has advanced rapidly in recent years and the farms now supply about 20 p.c. of the total production of mink pelts.

Compared with the preceding season, increases in average prices are shown for all kinds excepting blue, red, and silver fox, and wolverine, for which lower prices are recorded. Among the principal kinds, silver fox dropped from \$36.06 to \$32.97, but muskrat advanced from 90 cents to \$1.32, and mink from \$8.41 to \$11.03.

The total number of pelts of all kinds produced during the season 1935-36 was 4,596,713, compared with 4,926,413 in the preceding season. The reduction was due, chiefly, to the smaller numbers of muskrat and squirrel pelts.

The following table gives details of raw fur production by kinds for 1935 and 1936.

¹ Coyote or prairie wolf pelts for Manitoba are included with wolf pelts.

External Trade in Furs.—The important external markets for Canadian furs are London and New York; the trade tables for the twelve months ended June 30, 1936, show that of the total of \$16,159,275 worth of raw furs exported, the United Kingdom took \$9,321,147 and the United States \$6,015,782. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which tables of the Customs Department are available, the value of raw furs exported was £19,395. The following table shows exports for recent years which are greatly in excess of the earlier values.

Among living animals exported from Canada only two kinds of fur-bearing animals are separately classified by the Customs Department. These are foxes, separately recorded first in 1925, and mink, in 1931. Live foxes exported were valued at \$1,388,459 in the fiscal year ended Mar. 31, 1925, \$1,434,686 in 1926, when the highest value was recorded, and only \$25,335 in 1937. Live mink exported were valued at \$66,811 in 1931 and \$27,590 in 1937. Foxes have been separately classified among imports of living animals since the fiscal year ended Mar. 31, 1928, when those imported were valued at \$6,914 compared with \$250 in 1937.

CHAPTER XI.—THE FISHERIES.

Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. Fishing may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has since yielded a perennial harvest to both Europe and America. According to the Census of 1931, of 3,927,591 persons in Canada gainfully occupied in that year, 34,340 were reported as occupied in the fishing industry, that is, in primary fishing operations exclusive of canning and curing.

A more detailed account of the history of the Atlantic fisheries was given on p. 348 of the 1934-35 Year Book.

Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion are of exceptional national value inasmuch as two of the four great sea-fishing areas of the world border on Canada. They fall naturally into three divisions: Atlantic, inland, and Pacific fishing grounds. A detailed description of each division, of the fish caught, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

Section 3.—The Government and the Fisheries.*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which, by agreement, are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island, and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1936-37, including civil government salaries, contingencies, etc., was \$2,036,891 and the revenue \$176,730.

Conservation.—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear, and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1936, operated 23 main hatcheries, 8 subsidiary hatcheries, 2 rearing stations, 8 salmon retaining ponds, and several egg collecting stations at a cost of \$214,528,

* Revised under the direction of W. A. Found, Deputy Minister, Department of Fisheries, Ottawa.

and distributed 111,672,401 trout and salmon eggs, fry, and older fish. The young fish are distributed *gratis* if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 in Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia. In New Brunswick, the oyster areas are under the jurisdiction of the provincial authorities, but in a portion of Shediac bay the areas have been transferred to the Dominion Department of Fisheries by the Provincial Government in order that certain oyster investigations might be begun there.

Direct Assistance.—On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish-curing and barrel-making have been in operation for several years.

From a special appropriation made by Parliament for the fiscal year 1936-37, the sum of \$200,008 was expended by the Department of Fisheries, in co-operation with the provinces concerned, in aiding needy fishermen in Nova Scotia, New Brunswick, Prince Edward Island, and Quebec, to re-establish themselves. In each of these areas, the Provincial Government contributed to the fishermen's aid an amount equal to the sum provided by the Dominion authorities for assisting the fishermen of that province. In all, 6,649 loans, totalling \$249,054 were made to fishermen in the Maritime Provinces and 22 loans, averaging \$1,061, to fishermen's associations, while in Quebec 8,930 fishermen received grants totalling \$127,616.

Scientific Research.—Under the direction of the Biological Board of Canada or Fisheries Research Board, stations for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Grande Rivière, Que., and Nanaimo and Prince Rupert, B.C. Another station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. A permanent staff of scientists is employed by the Board. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and papers dealing with them issued by the Board. Instructional courses for fishermen are given at some of the stations and information brought out by the station research is made available without charge to interested branches of the fishing industry.

International Problems.—The chief international fisheries problem has been the question of the privileges of the United States in the Atlantic fisheries. Details of the history of this question for the past century and a half may be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi* licence plan, which grew out of a treaty of 1888, which, however, was never ratified, United States vessels have again been permitted to enter Canadian ports to buy bait and all other supplies.

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in connection with the sockeye salmon fishery of the Pacific coast

where the sockeye of the Fraser river, British Columbia, are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners. Different treaties to settle the matter were signed but none of them has so far been made effective.

Better results have been obtained in dealing with the international problem touching the halibut fishery of the Pacific which was settled by the treaty "For the Protection of the Pacific Halibut", signed by Canada and the United States on Mar. 2, 1923. Under this treaty a close season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of the two countries at Ottawa on May 9, 1930, and ratified by the respective Governments of the countries on May 9, 1931, provided for the regulation of the fishery by the division of the waters into fishing areas, changing of dates for close seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.*

Fishing Bounties.—By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1936, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$6.60 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$5.70 each. The total amount paid in 1936 was \$159,977. Details of the distribution of bounties for the years 1933 to 1936 are as follows:—

1.—Government Bounties Paid to Fishermen for the calendar years 1933-36.

¹ Amounts include payments to vessel and boat owners.

Collection of Statistics.—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries, and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. Under this

* A new convention, generally similar to that of 1930 but embodying several changes, was signed at Ottawa on Jan. 29, 1937.

arrangement, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries, so far as operations in areas where the fisheries are under Dominion administration are concerned, and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

Section 4.—The Modern Fishing Industry.*

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only \$125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it reached \$6,000,000 and this was again more than doubled by 1878. By 1900 it had reached a total of \$21,000,000 and the growth continued with little interruption until 1918, when it reached the high record of \$60,000,000. Since then there have been decreases in value, due to lower prices rather than to smaller catches. In 1936 the value was \$39,165,055 and

* Revised by Miss F. A. Brown, Chief of the Fisheries, Fur, and Dairy Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on fish caught, marketed, and prepared, by provinces. These may be obtained from the Dominion Statistician.

showed an increase of 13.7 p.c. over 1935. It will be understood that the figures given represent the total value of the fish as marketed, whether in a fresh, dried, canned, or otherwise prepared state. The numbers of employees engaged in the industry have increased in proportion to the catch, amounting in some years to over 90,000, and the capital investment has gone as high as \$64,000,000. In 1936 the number of employees was 86,973, and the capital investment, \$45,831,842.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy; since 1895 salmon has definitely taken the lead, and the heavy packs and high prices of lobsters have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869-1936 was approximately \$462,000,000, and that of the cod fishery, \$290,000,000. These facts have affected the relative standing of the provinces, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia. The record of production since 1870, production by provinces for the past six years, and the record of principal fish products for the past five years, are shown in Tables 2, 3, and 4, respectively.

2.—Total Values of the Products of the Fisheries of Canada, 1870-1936.

NOTE.—From 1870 to 1906, inclusive, years ended June 30; from 1908 to 1917 (a), inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

¹ Quantities caught. ² Values marketed. ³ Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only. ⁴ Prior to 1935 clams and quahaugs were combined.

Quantities and Values in Recent Years.—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units, which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Table 5 by working out what the values would be

in a later year if prices had remained the same as in the preceding year. From 1935 to 1936 there was an increase of 13.7 p.c. in the total value of the fisheries. The increase due to higher prices was 4.8 p.c., while larger quantities caught accounted for the other 8.9 p.c. of the increase in total values. The improvement of actual values in 1936 amounted to over \$4,700,000; 35 p.c. of it was due to higher prices, and 65 p.c. to larger quantities.

5.—Value of the Fisheries Production of Canada in 1936 Compared with 1935, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.

Kind of Fish or Product.	Actual Value, 1936.	Value at Prices of 1935.	Actual Value, 1935.	Increase (+) or Decrease (-).	Due to Higher (+) or Lower (-) Prices.	Due to Larger (+) or Smaller (-) Quantities.

Capital and Employees.—The total capital invested reached an all-time record of \$64,026,297 in 1930, declined successively for three years to \$40,914,057 in 1933, rose again in 1934 and in 1935, and in 1936 reached \$45,831,842, an increase of \$2,213,954 over 1935 and of \$4,917,785 over 1933, the low year of the period 1920 to 1936. The number of persons employed in the primary and secondary operations connected with the fishing industry declined from 80,450 in 1929 to 74,882 in 1931, rose steadily since then to 83,436 in 1934, dropped in 1935 to 82,918, and rose again to 86,973 in 1936. The 1936 figure is the highest in the period 1920 to 1936.

Trade.—The domestic consumption of fish is relatively small in Canada and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1936, total exports amounted to \$25,398,102, of which \$12,917,592 went to the United States and \$5,781,730 to the United Kingdom. A further division shows that \$9,388,184 went to British Empire countries and \$16,009,918 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh whitefish, fresh salmon, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market. Canadian imports of fishery products in the calendar year 1936 amounted to \$2,918,251. A general review of the import and export trade in fish for 36 years past is given in Table 14, by fiscal years, while Table 15 gives a comparative record of exports, by countries, during the calendar years 1935 and 1936. Table 16 shows the leading items of export for the calendar years 1934-36. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

14.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-37.

NOTE.—In this table "Exports" includes seal skins, fish oils and whale oil, and "Imports" includes turtles, whalebone, shells and their products, fur skins of marine animals, fish oils and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI on External Trade, in this volume.

¹ Information not available prior to April 1, 1936.

² Nine months, April to December, 1936.

Sharp increase in the value of fisheries exports, as compared with 1936 value, took place during 1937. Shipments of fish and fish products to export markets during the year had a value, in round figures, of \$28,834,000, or almost \$3,500,000 more than in the preceding year. So far as fisheries production in 1937 is concerned, preliminary figures indicate some decrease in the landings of sea fish and shell fish, but an increase in the landed value of the sea catches to the fishermen. Statistics of fresh-water catch and landed value are not available at the time of writing.

CHAPTER XII.—MINES AND MINERALS.*

NOTE.—An article on the geology of Canada will be found at pp. 16-17 of the present edition of the Year Book.

Historical Sketch.—The early settlements in the lower St. Lawrence valley were hemmed in by the non-agricultural rock formations of the Canadian Shield which approached closely to the first points of colonization. An important epoch of Canadian expansion, about the middle of the 19th century, coincided with the surmounting of the transportation difficulties presented by the arm of the Canadian Shield which crosses the St. Lawrence river above Montreal and is responsible for the series of rapids between that city and lake Ontario. A second and greater period of expansion followed again when railways bridged the barriers of rocky country separating lake Superior in the east and the Pacific coast in the west from the extensive agricultural plains of the Prairie Provinces. These forbidding areas, with their exposed ancient rocks, their forests, and their lakes, which impeded Canadian growth and agricultural settlement until nearly the end of the 19th century, since 1920 have become, because of their resources of pulpwood, water power, and mineral deposits, the chief source of the expansion of wealth and productive activity.

The discovery of minerals in Canada was closely associated with the early exploration of the country. Iron and silver, and later coal, were reported in Nova Scotia by some of the first French adventurers. Bellin's maps published in 1744 indicated the existence of silver-lead not ten miles distant from the now famous Cobalt Silver Camp. However, in the early period of Eastern Canada's history such development of mineral resources as occurred was almost entirely incidental to the agricultural colonization of the country and consisted principally of the smelting of bog iron ores and of the production of such necessities as salt and building materials.

Though coal was discovered on Vancouver island in 1835, it was the alluvial deposits of the Fraser river and the gold rush to the Cariboo in 1859 which really opened up the interior of the mainland, so that, on the western coast, mineral exploitation preceded agricultural settlement.

These early isolated discoveries were followed by others, notably the gold ores of Nova Scotia, the copper-nickel of Sudbury, the silver of Silver islet on lake Superior, copper-gold at Rossland, and silver-lead in the Kootenays. A foundation for the mining industry was laid with the setting up of the Geological Survey of Canada under Sir William Logan and the publication in 1863 of the "Geology of Canada". However, it was not until the mining development in British Columbia in the 1890's and the discovery of rich deposits of silver and gold in northern Ontario in the first decade of this century that the mining industry began to give promise of its tremendous possibilities. The effects of successive steps in the development of the mineral resources may be traced in the per capita figures of mineral production in Table 1, p. 343. The first period of rapid increase from 1895 to 1900 resulted from the placer discoveries of Yukon and the expansion of lode mining in British Columbia. The next important increase in 1906-13 followed the discovery of silver and gold at Cobalt and Porcupine.

* Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section 1, under "Production".

War prices stimulated the production of base metals from properties already developed, but on the whole active prospecting was much curtailed during the war period. However, in the decade following the War, new discoveries were widespread and the expansion was very rapid. The aeroplane furnished a means of comparatively easy access to remote districts and the discovery of new deposits of minerals increased annually. Important discoveries of base metals were the copper-gold areas of Rouyn in northwestern Quebec, and the copper-gold-zinc ore bodies near the Manitoba-Saskatchewan boundary. Expansion programs were carried out at nickel-copper properties in the Sudbury district of Ontario and silver-lead-zinc properties in British Columbia. New gold mines were brought to the production stage in northwestern Quebec, northwestern Ontario, and eastern Manitoba. An intrepid prospector went farther afield and uncovered silver-radium ores at the easterly end of Great Bear lake.

It should not be imagined from the brief outline given above that the successful and profitable development of mining enterprise in Canada has depended solely upon the *discovery* of the ore bodies. Even in the case of occurrences of free-milling gold ores, a long and expensive process of exploration is required before the possibilities of a property as an economic producer can be determined, and, in the majority of cases, though the original discovery may be promising, development yields disappointing results. In the case of base-metal ore-bodies, not only is the expenditure for preliminary development necessary, but also difficult problems in metallurgy are presented, requiring long periods of research and experiment for their solution before profitable production is made possible. The nickel-copper deposits of Sudbury were discovered in 1883, but production on an important scale did not come until after 1900 and the greatest expansion has occurred since the War. The great Sullivan silver-lead-zinc deposit in the Kootenay district of British Columbia was discovered in 1892, but production upon anything like the present scale did not come until after the War, when a successful method of separating the lead and zinc had been worked out.

Statistics of Mines and Minerals.—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

For more detailed information on the mineral production of Canada, the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The more important of these are: annual preliminary reports on the mineral production of Canada; a complete, detailed, annual report on the mineral industries; monthly bulletins on the production of the 16 leading minerals; and monthly, quarterly, and annual reports on coal statistics. (See footnote to p. 335.)

The following material of this chapter is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws; (2) a summary of general production; (3) the industrial statistics of the mineral industries; (4) production of metallic minerals; (5) production of non-metallic minerals; (6) production of clay products and structural materials.

Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

Subsection 1.—Dominion Mining Laws and Regulations.*

Dominion lands to which these regulations apply are those administered by the Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

Placer.—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over; claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty 2½ p.c. under the Yukon Placer Mining Act.

Quartz.—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen, and oil shales.

Under the present regulations, effective April 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miners licence, the fee being \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for 2 other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51.65 acres, being 1,500 feet square. Entry is granted by a mining recorder, fee \$5 for a claim located by a licensee on his own licence and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year, and the renewal of the owner's miners licence. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense, and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a

* For copies of any of the regulations referred to application may be made to the Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

claim not exceeding 51.65 acres being \$50. The cost of the survey, reckoned at \$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims may be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone, and gravel from beds of rivers.

Subsection 2.—Provincial Mining Laws and Regulations.

The granting of land in any province except Ontario no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas), and quarrying. Under these divisions of the mining industry provincial regulations may be summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These are sometimes described as quartz, lode minerals, or minerals in place. The most elaborate regulations apply in this division. In all provinces a prospector or miners licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising-looking ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a boring permit on likely ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.—Regulations under this heading define the size of holding and the terms of lease or grant.

The more important features of the regulations dealing with these divisions of the mining industry are outlined for each of the provinces below.

Nova Scotia.—*Administration.*—Minister of Public Works and Mines, Parliament Buildings, Halifax. *Legislation.*—Mines Act (c. 22, R.S.N.S. 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22), 1933 (c. 12), 1935 (c. 23), 1936 (c. 46), and 1937 (c.19).

General Minerals.—Prospectors licence at nominal fee. Lease of mining rights—40 years for gold and silver; 20 years, three times renewable, for other minerals; both subject to annual rental and performance of work.

Coal.—Royalty—12½ cents per long ton, with exemption of coal used in mining operations and for domestic purposes by workmen employed about the mine.

Quarrying.—Rights to limestone, gypsum, and building materials are acquired with ordinary land title.

New Brunswick.—*Administration.*—Department of Lands and Mines, Fredericton. *Legislation.*—Mining Act (c. 35, R.S.N.B. 1927), as amended by c. 27, 1927, and c. 23, 1933. In most grants of Crown land since about 1805, all mines and minerals are reserved to the Crown. Prior to that time, most of the land grants reserved only gold, silver, copper, lead, and coal.

General Minerals.—Prospectors licence costs \$10 for a year. *Claims.*—A prospector may stake 10 claims of 40 acres each which must be registered within 30 days and 25 days' work done in each claim within the year. All this work may be concentrated on one of a group of claims. Mining rights are granted by mining licence, renewable annually, upon payment of \$10 per claim. When the mine produces on a commercial basis, a 20-year lease under similar conditions may issue.

Fuel.—Royalties are 10 cents per long ton on coal and 5 p.c. on the value at the well's mouth for petroleum and natural gas.

Quebec.—*Administration.*—Minister of Mines, Quebec. Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines. *Legislation.*—Quebec Mining Act (c. 80, R.S.Q. 1925) and amendments. In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and gold and silver rights on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

General Minerals.—Miners certificate good for calendar year; fee \$10. *Claims.*—Five claims of 40 acres each must be recorded and 25 days' work per claim done within 12 months; a development licence renewable annually is granted upon payment of \$10 recording fee and 50 cents per acre. Mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals. Operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated from 4 p.c. upward.

Ontario.—*Administration.*—Department of Mines, Parliament Buildings, Toronto. A resident mining recorder is appointed for each mining division. *Legislation.*—Mining Act (c. 45, R.S.O. 1927), with amendments; applies to all Crown lands except Indian lands. Title is a grant in fee simple, except in provincial forests where mining lands are leased. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or on appeal, by the Judge of the Mining Court of Ontario.

General Minerals.—Annual miners licence—fee \$5 for an individual; \$100 on each \$1,000,000 capital for companies; holder permitted to stake 3 claims

in any and every mining division for himself and 6 additional for other licence holders, but not more than 3 for any individual licensee. *Claims.*—In unsurveyed territory 20 chains square (40 acres) with lines N.-S. and E.-W. astronomically; in surveyed territory an eighth, a quarter or a half lot, *i.e.*, up to 50 acres. Representation work consists of the actual performance of at least 200 days' work within 5 years. *Taxation.*—Five cents per acre per annum on patented and leased mining lands with an area of 10 acres or over in unorganized territory; on net profits, with \$10,000 exempt, 3 p.c. up to \$1,000,000, 5 p.c. from \$1,000,000 to \$5,000,000 and 6 p.c. on the excess above \$5,000,000.

Fuels.—Petroleum, natural gas, coal, and salt on the James Bay slope may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

Manitoba.—*Administration.*—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg; mining recorders' offices at Winnipeg and The Pas. *Legislation.*—The Mines Act (c. 27, 1930; c. 28, 1932; c. 25, 1933; c. 27, 1934) and regulations thereunder; the Mining Tax Act (c. 27, 1933; c. 44, 1937); and the Well Drilling Act (c. 50, 1937).

General Minerals.—The regulations follow closely those summarized for Dominion lands in Subsection 1, except that: not more than 3 claims may be staked for any one licensee, and not more than 9 altogether by one person in any year in any mining division; and representation work required is 25 days' work per year for 5 years for which purpose 9 claims may be grouped.

Fuels.—A prospecting permit, good for one year, is necessary to search for oil, coal, gas, or salt. If mineral is discovered a 21-year lease, subject to annual rental and certain work, is granted.

Quarrying.—Lands up to 40 acres containing building stone, clay, gravel, gypsum, or sand may be leased as a quarrying location at an annual rental.

Saskatchewan.—*Administration.*—Department of Natural Resources, Regina. *Legislation.*—Mineral Resources Act of 1931 and regulations thereunder; Saskatchewan Mines Act, providing for the competency of mine managers and pit bosses, for the reporting of accidents and the welfare and safety of those employed in the production of minerals; Coal Mining Industry Act, 1935, providing for a Coal Administrator to administer all legislation pertaining to the coal industry.

General Minerals.—The regulations follow closely those outlined for Dominion lands in Subsection 1, except that the holder of a miners licence may stake not more than 3 claims for himself and 3 for each of 2 other licensees, while not more than 9 claims may be grouped for representation work.

Coal.—Three locations may be applied for by mail or in person; the size of a location may be from 40 acres to 640 acres, but the length must not exceed three times the breadth. All operators must be licensed by the Coal Administrator, the licence being contingent upon payment of fair wages, workmen's compensation assessments, rentals, and royalties to the Crown and certain other conditions. Operators must mine annually 5 tons per acre, on leases issued since Jan. 1, 1936.

Petroleum and Natural Gas.—Locations may be applied for by mail or in person. The area of a location may be from 40 acres to 19,200 acres, and one person may

apply for 3 locations, but not over 19,200 acres in all, except in unsurveyed lands, in which the limit is 1,920 acres. An operator must obtain a permit and furnish a substantial bond. All drillers must secure licences of competency. The record of a driller may be obtained by payment of a fee.

Alberta.—*Administration.*—Department of Lands and Mines, Edmonton. There is a staff of inspectors of mines. *Legislation.*—The Coal Mines Regulation Act and regulations thereunder make provision for the safe operation of mines of coal, ironstone, shale, clay, and other minerals. Operating officials must hold certificates of competency. Monthly reports of operations must be returned to the Minister. The Coal Sales Act requires all coal mines to be registered by name and all coal produced to be sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

The general laws and regulations pertaining to mining and minerals are similar to those in force under the Dominion Government before the Provincial Government took over the natural resources in 1930. They follow closely those summarized in Subsection 1 of this chapter.

British Columbia.—*Administration.*—Department of Mines, Victoria. The Department includes all Government offices in connection with the mining industry. *Legislation.*—The Department of Mines Act and other Acts respecting mining and minerals, notably: The Mineral Act (c. 181, R.S.B.C. 1936); The Placer-Mining Act (c. 184, R.S.B.C. 1936); Metalliferous Mines Regulation Act (c. 189, R.S.B.C. 1936); The Coal-Mines Regulation Act (c. 188, R.S.B.C. 1936); and amendments to the above Acts.

Placer.—Claims are of three classes: (1) creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings over which water never extends—250 feet square. A placer claim must be worked by the owner, or someone on his behalf continuously during working hours. Discontinuance for 72 hours, except in close season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before the expiration of the year.

Placer leases of unoccupied Crown lands, approximately 80 acres in extent, may be granted by the Gold Commissioner of the district, the annual rental for same being \$30 and the annual expenditure required in development work \$250. Provision is also made for the granting of special leases of areas in excess of that referred to above.

General Minerals.—The terms of the mining laws are favourable to the prospector and operator, fees and rentals being small. Prospectors licence or "free miners certificate"—applicant must be over the age of 18; fee for individual \$5 per annum; for a joint-stock company \$50 or \$100 per annum depending on capitalization. Mineral claims must not exceed 1,500 feet square (51.65 acres); work, amounting to \$500 which may be spread over 5 years, required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre.

Section 2.—Summary of General Production.

The trend in the development of the mineral resources of Canada was affected by the incidence of the depression for several years after 1929. The decline in the prices of base metals materially reduced the prospecting for, and development of, new deposits of these metals, but the higher price of gold after 1932 greatly stimulated the development of auriferous deposits. Prospecting for gold ores and the exploration and development of known auriferous deposits have been more extensively carried on throughout Canada since 1932 than ever before. These activities have been common to both the older producing camps and new areas. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their economic possibilities. In

some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves.

The economic recovery since 1932 and the rising trend in base-metal prices have resulted in a rapid increase in production from deposits which were already known and partly developed before 1929; this expansion has occurred in spite of the fact that base-metal prices have not yet reached the level relative to gold which existed prior to 1929. The metals, nickel, copper, lead, and zinc were produced in greater quantities in 1937 than ever before in Canada. Furthermore, during the past year there has been a revival of activity in the search for base-metal properties.

Production of various non-metallic minerals, especially asbestos and coal, have realized important gains since 1932. The gains in the structural materials industries, where recessions were severe during the period of business depression, have been encouraging since 1933, but there is room for a large expansion in this division when the construction industry recovers its normal activity.

In 1936, the latest year for which comprehensive world figures of the Imperial Institute are available, Canada stood first in the production of asbestos, nickel, and the platinum metals, second in radium, third in gold, zinc and copper, and fourth in lead and silver. During that year, Canada produced approximately 87 p.c. of the world production of nickel, 54 p.c. of the asbestos, 11 p.c. of the copper, 11 p.c. of the gold, 11 p.c. of the lead, 9 p.c. of the zinc, and 7 p.c. of the silver.

The Preliminary Report on the Mineral Production of Canada, released by the Dominion Bureau of Statistics in March, 1938, shows a total valuation of \$456,793,280 for the mineral output of the Dominion in 1937 compared with \$361,919,372 in 1936. This represents an increase of 20.8 p.c. and reflects the continuation of the improved conditions commencing in 1933.

Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1935 and 1936, with the percentage of increase or decrease in the latter year.

1.—Value of Mineral Production in Canada, calendar years 1886-1937.

Volume of Mineral Production in Recent Years.—An interesting comparison of the mineral production of the two years 1935 and 1936 is furnished in Table 3.

The percentage increase or decrease in quantity production of the individual minerals is shown in Table 2 above, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later

year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

Mineral production in 1936 increased materially when compared with 1935. Table 3 shows that there was an increase of 14.6 p.c. in physical volume. There was a healthy increase in the volume of production in all divisions of the mineral industry, while in the case of non-metallic minerals other than fuels, the gain amounted to no less than 50 p.c. The average price level was slightly lower in all divisions except metallic minerals.

It is interesting to note the uneven influence of the economic disturbances of recent years upon different divisions of the mineral industry. Prior to 1935, production in Canada reached its highest recorded value of \$310,850,000 in 1929. The production of metallic minerals actually expanded further in volume in 1930, and in 1932 was still 3.7 p.c. greater than in 1929. Drastic declines had occurred in the volume of production in other divisions, fuels being reduced 28.9 p.c., other non-metallics 47.8 p.c., clay products 72.1 p.c., and other structural materials 57.6 p.c. compared with 1929. The rapid decline in prices was arrested by 1933 and in that year there was increased volume of production in both metallic and non-metallic minerals, but production declined further in clay products to only 20 p.c. and in other structural materials to only 31 p.c. of their respective volumes in 1929. Since then, there has been improvement in all divisions of the industry. Compared with 1929, the volume of production in 1936 was 60.1 p.c. greater for metallic minerals, 10.1 p.c. smaller for fuels, 9.8 p.c. greater for other non-metallics, 71.1 p.c. smaller for clay products, 49.9 p.c. smaller for other structural materials, and 17.5 p.c. larger for the whole mineral industry. Preliminary figures for 1937 indicate a further considerable growth in the production of metals and a continuation of the recovery in each of the other divisions.

¹Since no production was reported for 1935 the price in that year is assumed to be the same as in 1936 and therefore the increase is entirely due to quantity.

Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 51.0 p.c. of the Dominion total in 1936. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 15.0 p.c. of the Dominion totals in 1936. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 13.7 p.c. of the total for Canada in 1936. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba and Saskatchewan, in recent years, have been making a growing contribution to the production of gold, copper, and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1911 is given in Table 4.

4.—Mineral Production of Canada, by Provinces, calendar years 1911-37.

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book.

¹ Includes a production from the Northwest Territories in 1932-37.

² Figures for 1937 are subject to revision.

The quantities and values of the minerals produced in each province during 1936 are shown in Table 5. This table shows the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

5.—Detailed Mineral Production of Canada, by Provinces, calendar year 1936.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1936 was as follows, in quantities and values: gold 50,359 fine oz., \$1,764,076 (including premium); lead 2,568,699 lb., \$109,513; silver 1,100,430 fine oz., \$490,501; coal 510 tons, \$2,286; petroleum 5,399 bbl., \$28,995; total, \$2,390,706. Radium and uranium salts were produced in Canada in 1936 from ores mined in the N.W.T., but statistics pertaining to those minerals are not available for publication. For Dominion totals by individual minerals, see Table 2. Dashes in this table indicate that there was no production reported for those provinces.

Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines, and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and net value of sales, while for 1934 and 1935 there was added a special survey of expenditures for equipment, supplies, freight, and insurance by the mining industry. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals, by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

A new figure "net income from sales" has been introduced since 1935 in accordance with a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa in 1935. The net income from sales is obtained by deducting the cost of fuel, electricity, and consumable supplies (explosives, lubricants, chemicals, etc.), consumed in the production process, from the net sales. In view of the fact that statistics of process supplies were not collected prior to 1935, it is impossible to present statistics of net income from sales for previous years comparable to this new figure beginning in 1935.

The net sales of the metallic industries given in Tables 6 and 7 are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional values obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc, and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for stocks unsold at the end of the year. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin.

The net sales of the fuel industries in Table 7 are less than the total production of fuels in Table 2, because the net sales are confined to products for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger

monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, the sales of the producing industries are the same in each case as the total value of the mineral commodities produced.

Subsection 1.—Principal Factors in the Mineral Industries.

Capital.—In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including: (1) present value of lands, buildings, plant, machinery, and tools; (2) cost of materials on hand, supplies, finished products, and ore on dump; and (3) cash, trading and operating accounts, and bills receivable. It should be specially noted that no estimate of ore reserves is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings might properly be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. On the other hand, after an ore body is exhausted, much of the mining plant has practically no resale value and, for this reason, many companies drastically write off the capital value of their plant during profitable years of operation. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital given in Tables 6 and 7 should be used with such reservations in mind.

Employees.—Tables 6 and 7 below also show the numbers of persons directly employed in the operating mineral industries. These figures, however, do not include those engaged in prospecting and exploration for individuals or small syndicates from whom no returns can be obtained, amounting probably in the aggregate to a considerable number. Neither do the figures include consulting geologists and mining engineers nor contract diamond drillers and their respective organizations.

Commodities and Services Purchased.—In addition to the expenditures for remuneration of those directly employed in the mineral industries, statistics are collected annually of expenditures for fuel and electricity, but the figures prior to 1935 given in Tables 6 and 7 are exclusive of the fuel and electricity used in metallurgical processes, such as reduction furnaces, electrolytic cells, etc. The mining industry expends annually large additional sums for the purchase of equipment, machinery, explosives, and a great variety of other supplies, and for freight and insurance. In a special investigation to obtain an estimate of these expenditures, firms engaged in the industry were circularized regarding such expenditures in 1934 and 1935. Returns received covered fairly completely the operating firms in the metal-mining and fuel industries, but in the other groups of mineral industries, where there are many small operators of gravel pits, small quarries, etc., the re-

turns were much less complete. Furthermore, no attempt was made to reach prospectors and small development parties whose expenditures in the aggregate, with so much exploratory activity as exists at present, would amount to a large sum. The figures resulting from these surveys* must, therefore, be regarded as suggestive rather than by any means comprehensive. In 1935, the reported expenditures amounted to almost \$85,000,000, of which freight and express made up 14.7 p.c.; electric power, 12.6 p.c.; fuel and lubricants, 11.7 p.c.; timber and building materials, 7.8 p.c.; explosives, 6.5 p.c.; insurance, 6.0 p.c.; and the remaining 40 p.c. consisted of a great variety of purchases such as machinery and tools, railway equipment, electrical equipment, motor vehicles, rubber goods, chemicals, pipe, etc. The metal mines and smelters accounted for 77.7 p.c. of the expenditures and coal mines for 11.1 p.c. These expenditures were shown by commodity items, by industries, and by provinces at p. 356 of the 1937 Year Book.

Subsection 2.—Growth of the Mining Industry in Recent Years.

Growth, 1922-29.—From 1922 to 1929, the output of the mineral industries increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This was reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel, and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

Developments Since 1929.—Following 1929 the mining industry in Canada was affected for some years by the world-wide economic disturbances and by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc, and silver. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of the early decline in base-metal prices, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees and 30 p.c. in salaries and wages paid. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base-metal industries, metal production has expanded again, and while the net sales in 1936 were not comparable with those of 1929, employees were 49.3 p.c. above, and salaries and wages 43.3 p.c. above 1929. While industrial statistics for 1937 are not yet available, the production figures for this latest year indicate a continued rapid growth in metal production.

Among the non-metallic industries the demand for coal declined during the depression years owing to reduced requirements in industrial and transportation

* The results of these surveys are given in the "Special Report on the Consumption of Supplies by the Canadian Mining Industry" for 1934 and 1935, published by and obtainable from the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

activities. Similarly, the demand for asbestos and gypsum was affected by the lower level of industrial and construction operations. Salt was an exception to the general rule, as its production was well maintained throughout, partly owing to its increased consumption in certain chemical industries. Indeed, the net sales of the salt-producing industry increased each year from 1929 to 1932 to a level about 23 p.c. above that of 1929. A large measure of recovery has taken place in this group of industries, especially in the production of non-metallic minerals other than fuels.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operation in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction has been more active in Canada since 1933 (see Chapter XV) and this increased activity has been accompanied by a welcome change to a rising trend in the production of clay products and other structural materials, although these industries are still at a low level compared with their activity prior to 1929.

6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-36, and by Provinces, 1936.

NOTE.—For the years 1921-28, see the 1936 Year Book, pp. 355-356. In the past, the net value of production, called "net sales", in these industries has been gross sales less freight and treatment charges in the case of mines, and less the value of ores charged in the case of smelters. According to a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa, 1935, the net figure, called the "net income from sales", is now obtained from net sales as defined above by a further deduction of the costs of fuel, electricity, and consumable supplies used in the production process. In the table below, however, to facilitate comparison with previous years, figures for 1935 are given to show deductions and resultant net by both methods, and figures for 1936 on the new basis only.

¹ Exclusive of fuel and electricity used in metallurgical processes, except for the footnoted figures for 1935 and 1936, which include all fuel and electricity (whether for metallurgical processes or not) and also the cost of consumable supplies. ² See headnote. ³ This is "net income from sales". See headnote to table, p. 355.

Subsection 3.—The Principal Mineral Industries.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1935 and 1936 is presented in Table 7. Coal mining has the largest labour force but is being rapidly overtaken by gold mining. Employment in the latter industry is, however, much less subject to seasonal fluctuations and its expenditures on salaries and wages are considerably greater than those of the coal-mining industry. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1935 and 1936.

³Includes

Section 4.—Production of Metallic Minerals.

Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The official estimate for 1937 is 4,095,872 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities, with a consequent reduction in their

operating costs, but also from the rise in the world price of gold itself. Under the stimulus of higher prices, prospecting for gold has been more active during recent years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

Nova Scotia.—Gold was discovered in Nova Scotia in 1860. Two years after the discovery, gold valued at nearly \$142,000 was recovered from the quartz veins; an annual output has been reported since that time. Since 1933, gold-mining activities have been more widespread with the industry showing signs of a general revival.

Quebec.—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The operation of this smelter, together with the development of gold properties in the northwestern part of the province, has established Quebec as the second largest gold-producing province. An important source is the copper-gold ores of the Noranda mine, but there is now a rapidly expanding production from auriferous-quartz properties operating in the same general section of the province.

Ontario.—Although gold was first discovered in 1866 in Hastings County and was later found and worked at points from there to the Lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves mine, led to the development of this second camp. The Lake Shore mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. In addition to Porcupine and Kirkland Lake, producing mines are now established in the Michipicoten district, in the district east of lake Nipigon, at Matachewan, at Larder Lake, and in the district of Patricia and other northwestern parts of the province.

Manitoba.—The presence of gold-bearing ores in Manitoba has been known since before the War but continuous production is a post-war attainment. The major part of the gold of the province is produced as a by-product from the Flin Flon smelter which treats copper-zinc ores. However, an expanding production is coming from auriferous-quartz operations in the Rice Lake and Beresford Lake areas east of lake Winnipeg and the newer Gods Lake area in the northeastern part of the province.

British Columbia.—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production. The

copper-gold ores of the Rossland and Yale Boundary districts, of the Britannia mine on Howe sound, of mines in the Anyox section and the ores of the Premier mine on the Portland canal were largely responsible for the gold from lode mining which reached its highest pre-war peak with 297,459 fine oz. in 1913. As a result of the higher price of gold, production in the province has recovered from 160,069 fine oz. in 1931 to the estimate for 1937 of 503,403 fine oz. The mines of the Bridge River district, including the Pioneer, Bralorne and others, are contributing to this current expansion. Placer prospecting in British Columbia has experienced a distinct revival since 1932, especially in the Stikine, Liard, Cariboo, and Atlin districts.

Yukon.—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations, principally in the form of dredging, and, recently, interesting explorations have been made of auriferous quartz veins in the Carmacks district.

World Production.—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851, respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia, and Russia.

In the fourth period, extending from 1891 to the present time, covered by the figures of Table 10, the outstanding features were the entry of South Africa as an important and later as the leading producer, the increase in the output of most of the gold-producing countries through the introduction of the cyanide process and, more recently, the rapidly increasing world production as a result of the appreciation in the value of gold. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 22,847,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,497,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years with all previous records being exceeded.

¹ At \$20.67+ per oz. fine, prior to 1934; at \$35 per oz. fine in 1934 and later years. since publication of the 1937 Year Book.

² Preliminary figures.

² Revised

In 1936 the world's chief producers were the Union of South Africa, with a production of 11,336,214 fine oz. or 34.4 p.c., U.S.S.R. (Russia), including Siberia, with 5,240,000 fine oz. or 15.9 p.c., United States with 3,759,645 fine oz. or 11.4 p.c. and Canada with 3,735,675* fine oz. or 11.3† p.c. As Australia, Rhodesia, British West Africa, and British India were also important producers, about 55.6 p.c. of the world production of 1936 was produced in the British Empire.

Detailed statistics of world gold production for 1935 and 1936 appear in Table 11.

* The revised figure for Canadian gold production in 1936 is 3,748,028 fine oz.

† This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute, as given on p. 343.

Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. The development of the silver-lead deposits of British Columbia largely accounted for an increase to a production worth over \$2,000,000 in 1896. From 1896 to 1905 annual production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district.

The silver production of Canada is chiefly derived from the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in the gold ores of northern Ontario, the nickel ores of the Sudbury district, the copper-gold ores of Quebec, Manitoba, and British Columbia and the pitchblende ores of the Northwest Territories. Thus in Canada silver is produced chiefly in combination with other metals.

Since 1926 British Columbia has been the chief silver-producing province. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver is also recovered from the copper ores produced in British Columbia.

During 1931 much interest was created by the discovery at Echo Bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with uranium- and radium-bearing ores. The first commercial production from this area occurred in 1932, when shipments were made to the Trail smelter in British Columbia. Production from this new camp has continued with shipments of silver-radium ores to the refinery at Port Hope, Ontario.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 12, while statistics of the quantities and values produced in the chief silver-producing provinces are given in Table 13.

1 Preliminary figures.

World Production of Silver.—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 11 of this chapter, at 251,443,089 fine oz. for 1936, an increase of 14 p.c. from 1935 and only 3.7 p.c. less than 1929, when world production reached a record maximum of 260,970,029 fine oz. The silver production of Canada in 1936 was 18,231,419 fine oz., or about 7.2* p.c. of the estimated world total for that year. This placed Canada fourth, next to Mexico, the United States, and Peru.

In Table 14 the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase rapidly while the price declined to a generally lower level. During the disturbed conditions of the war period production was curtailed and the price rose to \$1.12 per fine oz. in 1919. However, in the period 1922-29 production increased to new records although the price declined to about half that of 1919. In the course of the depression the price declined further by nearly 50 p.c. and production contracted also, but both have tended to recover since 1932. The fact that silver is to a great extent a by-product in the mining of other metals, helps to explain its increasing production, in spite of lower prices, since 1872.

* This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 343, based on the world estimate of the Imperial Institute.

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-36, for which the means of the New York bid and asked prices were used.

² Revised since the publication of the 1937 Year Book.

Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. Since then output has grown to 421,027,732 lb. in 1936. Some Canadian copper producers, located principally in Manitoba, Ontario, and Quebec, were fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation during the years of abnormally low copper prices prevailing from 1930 to 1935. However, the unfavourable copper market which existed during the depression did not encourage production and the search for and development of new copper properties was curtailed. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected copper production in British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there. The improvement in copper prices accompanying general industrial

recovery and rearmament requirements stimulated the production of the metal in 1936 and 1937.

Quebec.—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Developments in the Rouyn Camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. Since 1931 the Canadian Copper Refiners Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter in Quebec and the Flin Flon smelter in Manitoba. Gold, silver, selenium, and tellurium are also products of the Montreal refinery.

Ontario.—The Sudbury deposits were first noted in 1856, but did not attract attention until 1883-84, when, during the construction of the C.P.R., a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are now the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper, precious metals, selenium, and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The Company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver, and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There has been, however, a remarkable recovery in production since then.

Manitoba and Saskatchewan.—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flinflon district on the Manitoba-Saskatchewan boundary since the War, and large bodies of ore have been proven on the Flinflon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flinflon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this Company has been continuous since 1930.

British Columbia.—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has greatly declined, owing principally to the cessation in August, 1935, of mining and smelting operations at Anyox, as a result of the low price of copper and exhaustion of ore reserves. In 1937, the Granby Company resumed operations at its Copper Mountain mine, and an increase in British Columbia copper output resulted.

15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-37.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

¹ First reported production in this province or territory.

² Includes a small production from New Brunswick and Alberta.

³ Includes 779,307 lb. valued at \$73,855 produced in Nova Scotia in 1936, and 188,531 lb. at \$24,556 in 1937.

⁴ Preliminary figures.

World Production of Copper.—World production of copper was estimated at 1,881,600 short tons in 1936, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 210,514 tons in 1936, producing about 11.2 p.c. of the estimated world total and standing third among the nations.

16.—Copper Production of the Leading Countries and of the World, 1913-36.

(In short tons of 2,000 pounds.)

⁴ Preliminary figures.

Subsection 4.—Lead.

Lead is obtained in Canada largely from the ores of British Columbia, where production began with 88,665 lb. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 (see the 1920 Year Book, p. 454) but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War, as shown in Table 17.

British Columbia.—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc, and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing from 1930 to 1935 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle.

Other Provinces.—Occurrences of lead have been found in Gaspe peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Tetreault mine produces lead and zinc concentrates. Lead production in Ontario has come chiefly from the Galetta mine and smelter, which closed down in the summer of 1931. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon, and in 1935 production of silver-lead-zinc concentrates was resumed at the Sterling mine, Richmond County, Nova Scotia.

17.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-37.

NOTE.—For figures for the years 1887-1910, see 1929 Year Book, p. 367.

¹ Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1913 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported.

² From 1911 to 1925, average prices at Montreal; from 1926 to 1936, average yearly prices at London, England.

³ Preliminary figures.

World Production.*—The world production of lead in 1936 was about 1,490,000 long tons. The principal producers were the United States with 22·3 p.c., Australia 15·0 p.c., Mexico 14·2 p.c., Canada 11·5 p.c., India 6·0 p.c., Yugoslavia 4·9 p.c., Germany 4·1 p.c., and Spain 2·7 p.c.

Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district and relatively small shipments in recent years of nickel-copper ore from the B.C. Nickel Mines, Ltd., the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under "Copper" in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 17,597,123 lb. in 1922, production expanded rapidly again and in 1928 exceeded that of the war year 1918, while 1929 established a still higher record. The depression brought another decline to 30,327,968 lb. in 1932, but a remarkable recovery has again been made and new records established each year since 1933, as shown in Table 18.

18.—Quantities and Values of Nickel Produced in Canada, calendar years 1911-37.

NOTE.—For figures for the years 1889-1910, see 1929 Year Book, p. 368.

¹ A change in the method of computing the value of nickel production accounts for the drop in value after 1923. ² Preliminary figures. ³ Not including experimental shipments from British Columbia.

The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore of the district is mined principally for its nickel and copper content but gold, silver, selenium, tellurium, and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending

* From the Imperial Institute's Statistical Summary.

their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables, and various nickel alloys all helped to absorb this increased production.

World Production.*—The world production of nickel was about 87,200 long tons in 1936, of which output about 87 p.c. was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades prior to 1925 derived from the silver-cobalt-nickel arsenides of the Cobalt district, when the cobalt produced by refineries in southern Ontario practically controlled world production. Large deposits of cobalt-bearing ores occur in Africa in the Belgian Congo, Northern Rhodesia, and French Morocco, and the introduction into world markets of cobalt from this source has increased world production while Canadian production has declined since 1925.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth, and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. Production of cobalt, computed as the metallic cobalt and cobalt in oxides from Canadian smelters, together with the cobalt recovered in ores exported from the mines and including cobalt in any residues exported, amounted in 1936 to 887,591 lb. valued at \$804,676, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1937 is estimated at 507,064 lb. valued at \$848,247.

Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flinflon copper-zinc ores of Manitoba. The growth of production since 1911 is shown in Table 19.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe sound, while primarily a copper-gold property, also produces zinc concentrates.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. In Quebec, zinc and lead concentrates are produced at the Tetreault mine, Notre-Dame-des-Anges, and zinc concentrates were shipped also during 1937 from the Waite-Amulet mine in the Rouyn district. At the Sterling mine, Richmond County, Nova Scotia, the production of lead and zinc concentrates was resumed in 1936.

* From the Imperial Institute's Statistical Summary.

¹ Estimated foreign smelter recoveries and refined zinc made in Canada.² Preliminary figures.

Subsection 8.—Iron.*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time, but none at present available can compete in low cost with high-grade external sources of supply.

Iron ore was first mined and smelted in the province of Quebec early in the eighteenth century, and from that time until 1883 the industry was carried on almost continuously at Three Rivers. Other furnaces using local ore were operated at Radnor Forges and Drummondville, the last to shut down being the Drummondville furnace in 1911. At the present time only titaniferous iron ore is mined in Quebec; this ore is produced near Baie St. Paul and is shipped for its titanium content.

More iron ore has been produced in Ontario than in any other province. Large quantities of red hematite were taken from the Helen mine in the Michipicoten district, while the Magpie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie.

No ores for the production of iron have been mined in Canada since 1923. The large iron and steel industry of Nova Scotia draws its requirements from the easily accessible and abundant supplies of the high-grade Wabana deposit in Newfoundland. In Ontario, also, there has been a broad development of the primary iron and steel industry largely because cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal-fields of Pennsylvania.

A revival in iron-ore mining in Ontario is indicated by the fact that, during the summer of 1937, the Algoma Properties Ltd. commenced rebuilding the surface equipment at the new Helen mine in the Michipicoten district, where reserves are estimated at 60,000,000 tons of iron carbonate rather high in sulphur and therefore requiring roasting to fit it for use in the blast furnace. An Act passed by the Ontario Legislature has provided for a bounty of two cents per unit of iron content for a period of 10 years commencing Jan. 1, 1939.

* The known resources of iron ore were briefly described at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

20.—Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-37.

NOTE.—For the years 1880-1910, see Canada Year Book, 1936, p. 373.

¹ Although shipments of ore are expressed in short tons, the trade uses long tons as the quantity unit for pig iron, etc. ² Preliminary figures.

From Table 20 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production declined greatly after 1929, but has been recovering since 1932. Production in the ferro-alloy industry (ferro-manganese, ferro-silicon, etc.) provides the chief source of exports of primary iron products from Canada.

Section 5.—Production of Non-Metallic Minerals.

Subsection 1.—Fuels.

COAL.

The fuel situation in Canada is somewhat anomalous, as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development in Ontario and Quebec are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio.

Dominion Fuel Board.—The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a division in the Bureau of Mines and Geology, Department of Mines and Resources. In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions has been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates has increased from 146,126 short tons in 1928 to 2,352,034 tons in 1936. Of the total moved under assisted rates in 1936, 1,677,096 tons were from Nova Scotia and 363,831 tons from Alberta and the Crownsnest district of British Columbia.

Coal Production.—During 1936 there was a further recovery from the low level of 1933. Production was, however, still 13.3 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928, had dropped to \$3.02 in 1933, and was about the same in 1936. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia, and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1936 production among these classes is given in Table 25.

21.—Production of Coal in Canada, by Provinces, calendar years 1911-37.

NOTE.—For annual production from 1874-1910, by provinces, see 1911 Year Book, p. 419.

Coal Consumption.—The sources of coal consumed in Canada in the calendar years 1911-36 are shown in Table 24, detailed figures of coal *made available for consumption* during 1936 are given in Table 25; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the

apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

24.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-36.

NOTE.—For the years 1886-1910, see 1921 Year Book, p. 354.

¹ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

² Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

³ Figures based on estimates of population given on p. 155.

⁴ Revised since the publication of the 1937 Year Book.

25.—Coal Output, Exports, Receipts from Other Countries, and Coal Made Available for Consumption in Canada during 1936.

NOTE.—For details by provinces, see the Bureau's annual report, "Coal Statistics for Canada".

World Production.—The total estimated coal production of the world in 1936 amounted to about 1,420,000,000 long tons, an increase of 9.2 p.c. over the estimate for the previous year. Canada contributed 13,597,484 long tons or about 1.0 p.c. Table 26 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-36.

26.—Coal Produced in the Principal Countries of the World, 1913, 1921-36.

NOTE.—For corresponding figures for 1914-1920, see 1932 Year Book, p. 281. Figures in this table, except as indicated, are from the Imperial Institute's Statistical Summary.

NATURAL GAS AND PETROLEUM.

Natural Gas.—The producing wells in Eastern Canada are in southwest Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island, and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1936, Ontario was credited with about 56 p.c. of the total value but only 36 p.c. of the total quantity, while Alberta produced 41 p.c. by value and 62 p.c. of the total quantity. The production by provinces since 1920 is given in Table 27.

27.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-37.

NOTE.—For the years 1892 to 1919, see "Mineral Production of Canada", 1928, p. 188.

¹ Totals for Canada include small productions in Manitoba, Saskatchewan, and Northwest Territories.

² Preliminary figures.

Petroleum.—The Turner Valley field in Alberta is the principal source of production in Canada. The earlier wells in this field give a wet gas from which a very high grade of crude naphtha and casinghead gasoline is obtained. However, in June, 1936, a well on the west flank of the southern end of the Turner Valley field, completed with a depth of 6,828 feet, was brought into production with a heavier grade (44° A.P.I.) of crude oil than that formerly derived from the Turner Valley. The successful completion of this well resulted in much drilling activity on the west flank of the field and other producing wells were completed. Furthermore, the flow of oil was greatly increased by acidation of a number of these wells. The result of these developments has been a rapid rise in the production of the Turner Valley field during 1937. The Red Coulee field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton. Production from wells near Fort Norman

on the lower Mackenzie river increased from 910 barrels in 1932 to 5,399 barrels in 1936. This oil is treated locally in a small refining plant and is used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1936, see Table 5 of this chapter.

28.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911–37.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

² Preliminary figures.

Subsection 2.—Other Non-Metallic Minerals.

Asbestos.—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen in Table 29. However, since 1932 production has shown a distinct improvement. The Imperial Institute's estimate for the world total of asbestos production in 1936 is 500,000 long tons. In 1936 Canada produced about 271,777 long tons, or more than half the world total, while other leading countries with their production in long tons were: Russia, 123,141; Southern Rhodesia, 50,309; Union of South Africa, 21,812; United States, 9,683; and Cyprus, 9,202.

The Eastern Townships of Quebec have for many years been the most productive asbestos-mining area in the world. The most important deposits are: at Black Lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos vary in width from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning. Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. Since 1935 development work has been con-

ducted on an asbestos property at Rahn lake, Bannockburn township, Ontario; the fibre in this deposit is reported as being of high quality and commercial shipments were commenced in 1937.

There are 13 plants in Canada which manufacture asbestos products, including the following commodities: asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos yarn; asbestos dryer felts; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil, and hydraulic operations.

29.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-37.

NOTE.—Figures for the years 1906-1910 are given in the 1911 Year Book, p. 424.

¹ The quantities and values of sand, gravel, and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years.

² Preliminary figures.

Gypsum.—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness, and Victoria Counties, Nova Scotia; Hillsborough, New Brunswick; Hagersville and Caledonia, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. The greater part of Canada's production is exported in crude form from the Nova Scotia deposits, which are conveniently situated for ocean shipping and during recent years account for about 80 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1936 was 833,822 tons valued at \$1,278,971, and preliminary figures for 1937 are 1,042,239 tons valued at \$1,536,587. The production by provinces during 1936 is shown in Table 5, p. 350.

Salt.—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia have shown an increasing production in recent years. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933. Commercial shipments were recommenced in 1937 from deposits near McMurray in Alberta. An important part of Canadian salt production (42 p.c. in 1936) is used in the form of brine in chemical industries for the manufacture of caustic soda, liquid chlorine and other chemicals.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a record at that time of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 391,316 tons valued at \$1,773,144 in 1936. (See Tables 2 and 5 of this chapter.) The estimate for 1937 is 459,027 tons, valued at \$1,799,465.

Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances, the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was still evident in 1933. With a slight recovery of construction activities since then (see Chapter XV) there has been a moderate increase in the production of the chief structural materials, the total estimated value of production being \$34,401,669 in 1937 as compared with \$16,696,687 in 1933.

Brick and Tile.—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 30, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1935 and 1936 is shown in Table 2 of this chapter, while the production by provinces in 1936 is given in Table 5. The estimated value of all clay products made in 1937 was \$4,589,933.

Cement.—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica, and alumina. The lime is usually furnished by limestone and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta, and British Columbia. As may be seen from Table 30, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Production by provinces in 1936 is given in Table 5 of this chapter.

Sand and Gravel, and Stone.—The mining, Metallurgical, and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, but for the sake of brevity they are here discussed together. However, the figures of stone production shown do not include the limestone used to produce lime and cement, nor the quartz and other rock minerals, which are shown separately in Table 2, pp. 344-345. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased by 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply, but since 1933 there has been some recovery. Among the developments in Canada that resulted in increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 381 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1936 production of stone, sand and gravel is shown in Table 5, p. 351, while the chief purposes for which these materials were produced are shown in Table 31 below.

¹ Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total quantity of stone produced in 1936 about 75 p.c. was limestone, 19 p.c. granite, less than 6 p.c. sandstone and less than 0.5 p.c. marble. The average value per ton was \$0.84 for limestone, \$1.40 for granite, \$1.74 for sandstone and \$7.42 for marble. Prices averaged lower in 1936 than in 1935 because a larger proportion of all stone except marble was used for riprap and crushed stone. The marble was used chiefly for stucco dash, in pulp and paper mills and other industrial processes, and for poultry grit and building stone. Large quantities of limestone were used for fluxing and other chemical purposes, but by far the largest part of all stone except marble was used as crushed stone.

CHAPTER XIII.—WATER POWERS.

The freshwater area of Canada is officially estimated at 228,307 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the freshwater area of any other country in the world. As many parts of this well-watered country are situated at considerable heights above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the waters from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

Section 1.—The Water Powers of Canada.*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic element. Statistics concern themselves with kilowatt hours of electric energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is now so vital, that those associated with power development in any country are keenly interested in methods and progress in other parts of the world. To facilitate a study of world power conditions, three Plenary World Power Conferences have already been held to consider the technical, economic, and statistical aspects of power development. The latest of these Conferences was held at Washington in September, 1936, and was composed of representatives of more than fifty member States. Following the first and second Conferences, sectional meetings were held to consider special problems related to the production and supply of energy.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the

* By J. T. Johnston, Controller, Dominion Water and Power Bureau, Surveys and Engineering Branch, Department of Mines and Resources.

total main-plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Dec. 31, 1937.

Canada.....	20,317,400	33,617,200	8,112,751

The figures of available power in the above table are based upon rapids, falls, and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom

the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six-month flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only slightly more than 18½ p.c. of the present recorded water-power resources and the figures of available power in Table 1 may be said to represent the minimum water-power possibilities of the Dominion.

Growth of Water-Power Development.—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1937 is shown, by provinces, in Table 2.

2.—Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1909-37.

¹ Includes totals for Yukon. Turbine horse-power in Yukon was 5 from 1900 to 1905, 2,055 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, 13,199 from 1914 to 1934, and 18,199 from 1935 to 1937.

² First reported installation in Saskatchewan.

Distribution of Developed Water Power.—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures there given, which indicate that 8.4 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.4 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 95 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

¹ Includes only hydro-electric stations which develop power for sale. ² Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,105,000 h.p., making a total of more than 1,785,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers. ³ Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations. ⁴ Estimated by the Dominion Bureau of Statistics.

Section 2.—Central Electric Stations.*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electrical appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horse-power, kilowatt hours generated and number of customers for the 20 years ended 1936, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1936 amounted to 25,402,282,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1937 is estimated at 27,600,000,000 kilowatt hours. This, if achieved, will be a new high record for the industry, and will exceed the 1936 output by 8.5 p.c.

* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX.

Exports to the United States reached a low point in 1932 with 467,215,000 kilowatt hours, but they began a steady increase about the middle of 1933 and continued to increase each year, the total for 1937 being 1,847,100,000 kilowatt hours, or four times the low record of 1932. The use of electric energy in electric boilers in various industries and particularly in the pulp and paper mills has increased rapidly and fairly steadily. In 1937 it reached a high record of 7,313,014,000 kilowatt hours, or 26 p.c. of the total output, and more than double the quantity so used in 1932. This power is partly off-peak power available at various times each day and partly surplus power available continuously until a better market develops. The domestic service consumption or the electricity used in residences has also increased steadily even during the years 1930-33 and in 1937 amounted to 1,887,116,000 kilowatt hours, an increase of 27 p.c. over the 1930 consumption and 7 p.c. over the 1936 consumption.

Interesting factors affect the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada. While the average consumption for domestic use is 64 p.c. higher in Canada than in the United States, the total consumption for domestic or residential use is about 7.4 p.c. of the total output of central electric stations for Canada and 16.6 p.c. for the United States.

¹ Excluding non-generating stations in 1920 and subsequent years.

² Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 9 of the Manufactures chapter, pp. 424-429.

³ Revised to exclude duplications.

⁴ Data not available.

Equipment of Central Electric Stations.—The main-plant primary power equipment of all central electric stations aggregated 7,119,272 h.p. in 1936. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 95.7 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4.3 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 200,621 h.p., or 2.8 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 52 main-plant steam reciprocating engines in central electric stations in 1936, only 9 in number were over 500 h.p. The steam turbines averaged approximately 4,400 h.p. with 18 units averaging 9,500 h.p., but there were only 60 steam turbines in the industry and these were confined to 22 stations, whereas the 809 water wheels and turbines averaged 8,400 h.p., including 4 at 65,000 h.p. and 5 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines and gasoline, oil distillates and producer gas for the internal combustion engines.

Of the 340 main-plant internal combustion engines in central electric stations in 1936, 189, or 56 p.c., were in Saskatchewan, 62 or 18 p.c. in Alberta, and 30 or 9 p.c. in Manitoba.

During 1936, the thermal engines produced 496,577,000 kilowatt hours at a cost for fuel of \$2,303,786, an average of 0.46 cents per kilowatt hour. This production was, however, less than 2 p.c. of the total output.

Provincial Distribution of Electric Energy.—The distribution by provinces of the electric energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1931-36. In the latest year over 82 p.c. of the total generated electric energy was produced in the leading industrial provinces

of Ontario and Quebec. From Table 7 it is seen that the total electric energy exported in the calendar year 1937 was 1,847,100,000 kilowatt hours, or 6.7 p.c. of the estimated production by central electric stations in that year; in 1936 it had amounted to 1,578,100,000 kilowatt hours, or 6.2 p.c. of the total amount generated in central electric stations.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the export of electric energy is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

In previous Year Books, Table 7 showed the quantities produced for export, including the line losses between the power houses and the International Boundary, and the data were on a fiscal year basis. The data below in Table 7 are the quantities actually exported and are for calendar years.

Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a "key industry" in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This "public ownership" movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick, and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

Subsection 1.—The Hydro-Electric Power Commission of Ontario.*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner-municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electric power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1936 electrical service was supplied by the Commission to about 782 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission, and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electric energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service 'at cost'. The rates charged by the municipal utilities for retail service are under the control of

* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

Power Supplies.—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 41 hydro-electric power plants operated by the Commission in 1936, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future has been made—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 1,600,000 h.p.

Hydro-Electric Power Commission Statistics.—The Canada Year Book of 1910 (p. xliii) described the turning on, at Berlin (now Kitchener), Ontario, on Oct. 11, 1910, of electric energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated nearly \$414,000,000 in 1936.

Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner-municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 12. These show, for 1936, total assets of \$152,039,551 as compared with liabilities of \$40,657,706. Of the difference, \$58,623,145 is allotted as reserves, leaving a surplus of \$52,758,700. The item "equities in H.E.P.C. systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt

to total assets the equity in Hydro systems is not taken into account. It will be noted that between 1932 and 1936 total assets have increased by \$19,663,487, while total liabilities have decreased by \$12,027,611.

Rural Electrical Service in Ontario.—During the past few years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A steady rate of increase is apparent from these statistics.

14.—Statistics Relating to Electrical Service to Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1932-36.

NOTE.—Re rural power district legislation, consult the following Ontario Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act, 1930* (20 Geo. V, c. 14); and *The Rural District Service Charge Act, 1930* (20 Geo. V, c. 15).

Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

Quebec.—*Quebec Streams Commission.*—Created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46), and by 20 Geo. V, c. 34, the Commission is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beaupré, and the North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$634,000.

Other reservoirs on the Gatineau, Lièvre, and Mattawin rivers which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission.

Provincial Electricity Board.—Created by an Act passed at the 1937 session of the Legislature (1 Geo. VI, c. 25), the Provincial Electricity Board superseded, with wider powers, the former Quebec Electricity Commission which operated from Dec. 2, 1935, to Aug. 31, 1937. The new Board is given power to control undertakings for the production, sale, and distribution of electricity in the province, to fully investigate the property and accounts of such undertakings, to alter and cancel abusive contracts, and to fix rates for the sale of electricity based upon the value of physical assets and reasonable expenses of an undertaking. All electrical undertakings in the province are to operate under licence from the Board, such licences to

remain in force for two years. The duration of all contracts for the distribution of electricity is limited to five years. The Act does not apply to municipal corporations which have established an electricity service, except that such corporations may benefit by the provisions for obtaining revision of an abusive contract.

National Electricity Syndicate.—Created by an Act of the 1937 Legislature (1 Geo. VI, c. 24), the Syndicate is intended to develop electricity-generating plants and distributing systems in the province. The Syndicate may establish its undertakings by one or both of two methods: first, by funds advanced by the Provincial Government; secondly, by the issue of stock or debentures of which the Provincial Government is to purchase at least 60 p.c. to give it a controlling interest. The Act authorizes the Syndicate to use the first method to develop generating plants and distributing systems in the electoral districts of Abitibi, Timiskaming, Lake St. John and Roberval, and for this purpose authorizes an advance to the Syndicate of \$10,000,000 which may be subsequently increased by the Legislature. No further alienation or extension of leases previously granted on water-power sites of over 300 h.p. capacity may be granted without consent of the Legislature. The Act also permits the Government to contribute up to 55 p.c. of the cost of an electricity distributing system established by any rural municipality.

Nova Scotia.—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply, and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret*—sells power by wholesale and retail in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, also power for a woodworking factory and a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.; *Canseco System*—serves various places on Cape Breton island, including St. Peters and Cheticamp districts which are supplied with diesel-generated energy. The Mabou district is supplied by the Commission with energy purchased in bulk from the Inverness collieries.

The Department of Rural Electrification of the Commission, created during the year 1937, is establishing various distribution districts throughout the province, and thus making service available to communities that were unable to enjoy electric light previous to the passing of the Rural Electrification Act, 1937.

The total installed capacity at Nov. 30, 1937, was 67,362 h.p., and there were about 308 miles of main transmission lines and 276 miles of secondary transmission and distribution lines. The total capital expenditure to Nov. 30, 1937, was \$14,487,803 and the reserves were \$2,253,715.

New Brunswick.—The New Brunswick Electric Power Commission, incorporated under provincial legislation, owns and operates two generating stations: an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John; and a 15,000 h.p. plant at Grand Lake in the Minto coal area. Transmission lines of 66,000 volts connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville. A 66,000-volt line delivers power from the Grand Lake plant to the towns of Newcastle and Chatham.

Power is sold *en bloc* to the cities of Saint John, Moncton, and Fredericton and to the town of Sussex, supplying 17,150 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 10,600 customers. The high-voltage line mileage is 307 and 1,100 miles of distributing lines are in operation. The Commission has under construction rural distribution lines totalling 85 miles in length which will add 250 customers.

The Commission has a plant investment of \$8,022,000 and an annual revenue of \$1,044,000.

Manitoba.—The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations, and individuals. Legislation was passed in 1929 by which the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electric energy. In 1931 passage of the Electrical Power Transmission Act reorganized the administration of the Commission by establishing a Board and giving to it additional authority.

The first transmission line was completed in 1920 to serve the city of Portage la Prairie. Power was sold to the city in bulk. With Portage la Prairie as a nucleus, the lines were rapidly extended over the entire southern and western portions of the province, and at the present time the Commission is serving 96 cities, towns, and villages. During this period the Commission took over several municipally-owned plants, notably the plants at Birtle, Brandon, Virden, and Minnedosa. Each of these services has now been tied into the main system and the plants are relegated to standby service. The Commission purchases energy from the municipally-owned plant at Dauphin and distributes it to outlying districts. Power is also purchased from the Winnipeg Electric Company at Selkirk and distributed to the summer resort areas along lake Winnipeg. The Commission has made rapid strides in the promotion of electrical services for farms. The farm rates have been lowered and the cost of building farm extensions has been considerably reduced. In 1937 the Commission made its first incursion into the eastern part of the province, when the towns of Whitemouth and Elma were served.

In 1936 arrangements were completed for the export of a block of power to the Inter-State Power Company at Niche, North Dakota.

The Commission owns and operates a central steam-heating system at Brandon, supplying heat to the business part of the city and to part of the residential section. It also owns and operates the Brandon gas plant.

The object of the Commission is to extend service to any district in which the available revenue is sufficient to justify the necessary capital expenditure. In this

connection, the years 1936 and 1937 brought an unusual number of inquiries for service and it is apparent that succeeding years will see the hydro network growing very rapidly.

Saskatchewan.—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell, and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power, and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers *re* the operation of electrical public utilities, and is charged with the responsibility for the administration of the Electrical Inspection and Licensing Act, 1935 (1934-35, c. 64).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged, or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt, and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfrs-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, and Lanigan and the privately-owned plant of the Maple Creek Light, Power & Milling Co. at Maple Creek were acquired, and in 1931 the generating plant at Willowbunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulgea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw, and Tisdale (where the Commission has a generating plant) with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. By a line built in 1935, service is given to the town of Battleford from the North Battleford plant. There are now 1,364 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 8,506 and those indirectly served (where the cities operate the distribution systems) number 16,796. The total plant investment as at Dec. 31, 1936, was approximately \$7,711,120.

British Columbia.—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electric energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

CHAPTER XIV.—MANUFACTURES.*

Section 1.—The Evolution of Canadian Manufacturing Industries.

Early Manufactures.—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was probably the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need—protection. It is therefore significant that, at a census of occupations taken in 1681, a comparatively large number of tailors, shoemakers, masons, carpenters, gunsmiths, and edge-tool makers were enumerated. Again, although the colonial policy of France under the old *régime* aimed at preventing the manufacture, in Canada, of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. From the introduction of sheep raising and the manufacture of home-spun woollens arose the important textile industries of to-day, which are able to produce the finest fabrics of cotton, wool or silk.

Under the British *régime*, shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865 when 105 Quebec-built ships with a total tonnage of 59,333 were registered. Thereafter, iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

One of the chief factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals, and water powers that Canada's industries are mainly based. The fish and fur resources also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the comparatively small home market, a large part of it in scattered agricultural areas, has always been one of the difficulties of the situation. In spite of this, Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon the further development of the many-sided physical assets of the country. The ore used in the manufacture of iron and steel in Canada, as well as the coal which has supplied the manufacturing industries with power, has, in the main, been imported from the United States, chiefly because the principal

* Revised by A. Cohen, B.Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile, and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch, see Chapter XXIX, Section 1, under "Production".

manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years coal has been increasingly replaced by electric power. The great bulk of the pig iron used in Canadian manufactures is made in domestic blast furnaces.

Subsection 1.—Growth of Manufacturing in Canada since 1870.

Growth of Canadian Manufactures Prior to the War.—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

The Influence of the War.—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had been imported previously. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure. Incidentally, factory methods become more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

This great boom in Canadian manufactures reached its height in the summer of 1920. Gross values in 1929, however, reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period.

Effects of the Depression on the Manufacturing Industries of Canada.—The downward trend in manufacturing operations which began in the fall of 1929 continued with increasing force to about the middle of 1933. As a result, the output of manufactured products in 1933, valued at \$2,086,847,847, was the lowest annual average reached since 1917. This was a decrease of 48.2 p.c. as compared with the peak year of 1929. In 1935 the value of production amounted to \$2,807,337,381, an increase of 10.8 p.c. over the previous year, but still 30.3 p.c. below the 1929 level. The number of persons employed decreased from 694,434 in 1929 to 493,903 in 1933, a drop of 28.9 p.c. For 1935, however, the number of employees was 582,874, an increase of 6.9 p.c. over the 1934 figures. In spite of this increase, the employees in 1935 still numbered 16.1 p.c. below the 1929 figure. The decline in salary and

wage payments exceeded even that of the number of employees, the drop between 1929 and 1933 being \$347,487,752 or 42.7 p.c. In 1935 the increase in salary and wage payments amounted to \$124,764,814 over 1933 and \$56,732,269 over 1934. Average earnings per employee, which in 1933 amounted to \$943, represented a decrease of 19.5 p.c. from the average earnings of \$1,171 in 1929. For 1935 average earnings were \$1,013. Table 8, p. 417, shows the percentage variation in employment, salary and wage payments and value of production since 1929.

The growth of manufacturing production since 1870 is shown in Table 1 following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-75 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1936, amounted in value to \$324,239,689, and exports of "partly manufactured" products to \$260,962,269 (see pp. 568-569 of the 1937 Year Book).

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1936.

NOTE.—Prior to 1920, totals for the chemical industries included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. Prior to this, only the cost of materials was deducted. The figures for 1924 and later years have been revised in accordance with this resolution. The revision could not be carried back further as statistics for cost of electricity are not available for years prior to 1924.

² Not reported. ³ Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as "manufacturing" industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the figures for 1936.

2.—Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-36.

NOTE.—See headnote, Table 1, p. 405.

¹ See footnote 1 to Table 1, p. 405. ² Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as "manufacturing" industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the figures for 1936.

Central electric stations.	2	2	2	2	2	2	2

¹ See footnote 1 to Table 1, p. 405.² Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as 'manufacturing' industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the totals for 1936.

Summary Statistics of Manufactures.—In Table 4 will be found an analysis of the most important statistics of manufactures for the period 1917 to 1936, brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values during the War and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930, the figures for these years become largely incomparable. One very important figure, however, which shows the trend of development clearly and uninterruptedly, is concerned with the use of power. In the analysis on p. 411 the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horse-power employed increased from 1,664,578 in 1917 to 4,346,775 in 1935, an increase of 162 p.c. in eighteen years. In the same period horse-power per wage-earner increased from 3.04 to 9.29, indicating the rapidly increasing utilization of electric power in manufacturing production. The significant feature is the increase in both the absolute figures of power employed and the average per wage-earner during the depression years as compared with 1929, although the large numbers of persons finding employment during 1934 and 1935 have reduced averages for those years compared with 1933. Another interesting comparison is the downward trends of value added by manufacture per employee and of average salaries and wages paid since 1929. However, compared with 1917 the figures for average salaries and wages in 1935 represent an increase of 23.7 p.c., while the increase in the value added by manufacture per employee is only 4.3 p.c., and wholesale prices of commodities declined 36.9 p.c. in the same period.

In using the figures for 1936 it is important to note that central electric stations, and dyeing, cleaning and laundry work are no longer regarded as 'manufacturing' industries. This change affects all the data for 1936 in Table 4, but especially the figures for capital. The apparent reduction of approximately 30 p.c. in capital is more than accounted for by the omission of these industries.

Value of Products.—The gross value of manufactured products in 1935 was reported as \$2,807,337,381; the cost of materials, including fuel and electricity, was \$1,505,158,282, leaving \$1,302,179,099 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,302,179,099 shown as having been added by manufacture, but not so great as the \$2,807,337,381 shown as the gross value of production. The value of products for 1936 is affected adversely in comparison with earlier years due to the fact that central electric stations are no longer regarded as a manufacturing industry.

Subsection 2.—Volume and Consumption of Manufactured Products.

Volume of Manufacturing Production in Recent Years.*—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most striking features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences, and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as the quantity of goods produced, and, as already explained, have become misleading under the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, and the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus, while the reported wage-earners in 1935 had increased 6.8 p.c. from the number in 1923, the volume of production is estimated to have increased 30.2 p.c. in the same period.

The central electric stations were excluded from general manufactures in making the index, since this industry is unique in that the product is energy in contrast to physical commodities; it is also unique in the magnitude of capital investment and the smallness of its labour force in proportion to net production. The index is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote to this page.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth

* For a much more detailed and comprehensive treatment of this subject, see the study "The Quantity of Manufacturing Production in Canada 1923-29" by A. Cohen, B. Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics.

of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$690,904,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

5.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923, 1929, and 1932-35.

(1926=100.)

Classification and Group.	1923.	1929.	1932.	1933.	1934.	1935.
Component Material Classification—						
Vegetable products.....	78.3	121.6	92.5	90.9	103.3	108.6
Animal products.....	81.4	95.4	83.2	86.4	93.9	99.1

Iron and its products.....	82.2	129.7	53.4	50.5	68.1	84.5
Non-ferrous metals.....	72.0	138.7	100.4	98.3	120.8	138.5
Non-metallic minerals.....	88.9	145.0	84.4	77.8	91.9	99.1
Chemicals and allied products.....	84.0	120.4	93.7	99.2	112.5	125.8
Miscellaneous industries.....	80.1	110.0	66.1	58.9	70.8	76.6
Totals, All Industries¹.....	81.8	123.9	81.9	82.0	96.5	106.5
Purpose Classification—						
Food.....	84.7	102.8	92.7	91.0	101.0	104.1
Clothing.....	82.9	114.8	93.2	87.9	105.1	110.5
Drink and tobacco.....	76.0	140.5	101.7	96.2	110.3	125.2
Personal utilities.....	85.4	101.9	70.6	71.0	79.8	87.9
House furnishings.....	78.9	137.7	89.9	87.3	100.5	109.2
Books and stationery.....	93.1	131.5	127.6	122.0	138.7	154.9
Producers materials.....	84.9	124.7	75.0	77.9	94.7	105.6
Industrial equipment.....	70.3	129.5	75.6	70.2	87.5	100.5
Vehicles and vessels.....	71.4	131.0	82.4	83.3	70.7	83.5
Miscellaneous.....	85.0	125.1	99.4	113.3	137.5	148.0

¹ Exclusive of central electric stations.

As may be seen from Table 5, all groups in the component material classification reported declines in the volume of production during the depression. In comparing the low point of the depression, *viz.*, 1933, with 1929 it is found that the iron and steel group suffered the greatest contraction in production with a decrease of 61.1 p.c. This was followed by the miscellaneous industries group, with a decrease of 46.5 p.c., non-metallic mineral products 46.3 p.c., wood and paper products 30.0 p.c., non-ferrous metal products 29.1 p.c., vegetable products 25.2 p.c., chemicals and allied products 17.6 p.c., animal products 9.4 p.c., and textiles and textile products 5.7 p.c.

In 1934 and 1935 there was a material improvement, the index of production for all industries rising from 82.0 in 1933 to 106.5 in 1935. In spite of this improvement only three groups—textiles, animal products, and chemicals—are above the 1929 level of production. The output of textiles in 1935 was about 10 p.c. greater than in 1929. This is an all-time record for this group of industries.

In analysing the changes in the volume of production, on a purpose classification basis, some interesting facts are revealed. In comparing 1933 with 1929 it is found that the food group reported a decrease of 10.6 p.c., while that of clothing decreased 14.7 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 59.5 p.c.—this is the greatest decrease of any group. Producers materials and industrial equipment declined 37.5 p.c. and 45.8 p.c., respectively, due to the general decline in industrial activity. House furnishings dropped 36.6 p.c., personal utilities 30.3 p.c., drink and tobacco 31.5 p.c., and books and stationery 7.2 p.c. The decrease

in the personal utilities group needs some explanation. The production of musical instruments, which is included in this group, has been decreasing steadily during the past few years, the output of pianos, phonographs and phonograph records becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is credited to the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

All groups shared in the improvement which occurred in 1934 and 1935. Only one of the major groups, *viz.*, "food", exceeded its 1929 production figure. The only other exceptions were two minor groups, "books and stationery" and "miscellaneous".

The index of the physical volume of production dropped from 122.9 in 1929 to 82.0 in 1933 and then rose to 106.5 in 1935, making a net decrease of 13.3 p.c. This decrease is significant when compared with a decrease of 31.3 p.c. in the net value of production and 20.1 p.c. in the number of wage-earners employed.

6.—Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, 1923, 1929, and 1932-35.

¹ Exclusive of central electric stations.

The construction of this new index of the volume of manufacturing production has superseded, for 1923 and later years, the index published in 1931 and previous years. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, but are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1922, and the new index, transposed to the 1917 base, from 1923 to 1935.

Consumption of Manufactured Products.—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 7, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1935 was \$2,607,807,756, a figure obtained by adding to the value of manufactured products in 1935 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1936, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, iron, textile, animal, and wood and paper products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$51,000,000 and \$56,000,000, respectively. Wood and paper, animal, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

In 1929, the order of the groups by the values available for consumption was iron, vegetable, textile, wood and paper, and animal products. In that year the value of iron products available for consumption represented 22.4 p.c. of the total for all products; in 1935 iron products represented only 17.1 p.c. of the total. Since 1929 the consumption of vegetable, animal, chemical, and textile products has been much better maintained than that of iron, non-metallic mineral, and wood products.

7.—Consumption of Manufactured Products, by Groups, 1935, with Totals for 1922-35.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

¹ For 1928 to 1935 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for those years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927, inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1923 to \$18,000,000 in 1927.

Section 2.—Production of Industrial Groups and Individual Industries.

The manufacture of products of vegetable origin comprises the most important group of industries, the output in 1935 being valued at \$509,822,142 or 18·2 p.c. of the total value of production. Wood and paper products with an output valued at \$441,160,387 or 15·7 p.c. of the total ranked second, followed by iron and its products with \$390,228,929, textiles \$357,106,277, animal products \$351,643,587, non-ferrous metal products \$288,523,250, non-metallic mineral products \$176,184,717, central electric stations \$137,114,911, chemical products \$118,574,228, and miscellaneous industries \$36,978,953.

In employment, the importance of the groups is different. Under this category, the wood and paper group with 123,724 or 21·2 p.c. of the total employees occupies the premier position. Textiles with 120,699 or 20·7 p.c. of the total comes second, followed by iron and its products with 95,426, vegetable products 79,285, animal products 60,124, non-ferrous metal products 33,613, non-metallic mineral products 23,342, chemical products 18,933, central electric stations 15,458, and miscellaneous industries 12,270.

Analysis by Groups of Industries.—In spite of the improvement which took place during 1934 and 1935, the number of employees in 1935 is still 16·1 p.c. below the number employed in 1929, with a still greater decrease of 27·4 p.c. in salaries

and wages paid. This reflects the lower level of wages prevailing in 1935 as compared with 1929. Due to the drop in the wholesale prices of manufactured products, the value of production dropped 30.3 p.c. between 1929 and 1935 while the physical volume decreased only 13.3 p.c. The iron and its products group was hit hardest by the depression. In gross value of products, the output of these industries was reduced by 71.3 p.c. in 1933 compared with 1929. In salaries and wages paid the reduction was 62.8 p.c. and in employees 46.4 p.c. The wood and paper group and those of non-ferrous metals and animal products suffered severely, but not by any means as much as in the first group named. The records of central electric stations, the chemical and textile industries were particularly good; the first named showed the least reduction of all groups in gross value of production, but the chemicals showed the smallest reductions in both employees and salaries and wages paid. The miscellaneous group of industries showed a reduction of 72.7 p.c. in gross value of products, 50.8 p.c. in the number of employees and 64.5 p.c. in the salaries and wages paid. This group was not as severely affected as these figures would indicate, the bridge-building industry having been transferred from this group to that of iron and its products in 1930. On the other hand, the iron and its products group suffered more severely than is implied by the figures.

From the low year of the depression, so far as the manufacturing industries are concerned, *viz.*, 1933, while there has been marked improvement in all groups, iron and non-ferrous metal products have shown the greatest improvement in gross value of products and quite naturally central electric stations have shown the least. In number of employees and salaries and wages paid, iron and its products is also the leader. It is of interest to note that in the section of the table below, which compares 1935 data with those for 1929, as regards employees engaged, two industrial groups—chemicals and textiles—actually show increases. The miscellaneous group of industries and iron and its products have made the least headway towards the 1929 level, although the latter group has made a very marked advance from the low point of the depression.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Manufacturing Industries in the Seven-Year Period 1929-35.

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

¹ In 1930 bridge building, formerly included with miscellaneous products, was transferred to the iron and its products group.

Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

Vegetable Products.—Though first in value of gross production in 1935, this group ranked only fourth in the number of people employed and in salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced, in 1935, 18.2 p.c. of the total manufacturing production and employed 13.6 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become pronounced. The War and the demand it created gave a great impetus to this trade. The 384 flour-mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has suffered adversity. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 4,881,057 barrels in 1935, but in spite of the decrease Canada continues to be one of the leading exporters of wheat flour.

With the increase in urban population, as well as the improvement in transportation, which increasingly enables rural communities to purchase factory-made bread, the bread industry made rapid strides during the past decade. During this period there was an increase of 30 p.c. in the capital invested and 54 p.c. in the number of employees. The bread and other bakery products industry had an output valued at \$59,400,668, capital investment reached \$43,788,924, employees numbered 19,167, and salaries and wages paid amounted to \$16,369,912. This industry was thus the third largest employer of labour among manufacturing industries. In salaries and wages paid, however, it ranked only eighth.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1935 she was the seventh largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, Japan, Germany, France, and Russia. Existing plants in 1935 numbered 45 and represented a capital investment of \$63,435,798, including equipment and working capital. These plants furnished employment to 11,023 persons who received \$11,017,431 in salaries and wages and produced goods valued at \$55,949,570. They also used raw materials to the value of \$20,258,774, mainly imported from tropical countries. The rubber industry is also of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped will show. Spain, Peru, Dutch East Indies, British East Africa, and China are but a few of these far-flung countries.

Establishments engaged in the production of tobacco, cigars and cigarettes numbered 116 in 1935. The capital invested in the industry amounted to \$58,178,513, employees numbered 8,145, salary and wage payments \$7,221,048, and the products made were valued at \$39,103,875 exclusive of excise taxes. Consumers of the products of this industry contributed about \$31,000,000 to the Dominion treasury in excise taxes. Canada is self-sufficient as regards its requirements of manufactured tobacco products. Practically the whole of the Canadian production goes to supply domestic demand, imports and exports of manufactured tobacco products being extremely small. The tobacco industry also contributes materially to the agricultural economy of Canada. Of the materials used, amounting to \$19,701,385, \$15,187,876 was for raw leaf tobacco. All told, the tobacco industry consumed 38,929,237 lb. of raw leaf tobacco of which 31,348,922 lb. was of domestic growth.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1935, this industry reported an output valued at \$38,276,487, a capital investment of \$38,272,379 and an employment of 7,912 persons, who received \$5,003,481 in salaries and wages. The development of the canned foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-35 the volume of fruit and vegetable preparations produced increased 155 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1935 were valued at \$2,652,961 and exports at \$5,138,094. According to these figures, the industry has a small exportable surplus over domestic requirements.

Other important industries of this group are: biscuits and confectionery, brewing, distilling, and sugar refining.

Animal Products.—Production in this group is determined, in large measure, by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1935 of \$133,379,312. Next comes butter and cheese, with a value of \$99,888,971. These two industries represented about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$99,888,971 coming from no fewer than 2,589 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces and no fewer than 217 boot and shoe factories were in operation in 1935, chiefly in Quebec and Ontario, representing a total capital of about \$24,000,000 with an annual output of over \$35,000,000 and employing 15,930 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 630 establishments were engaged in 1935 in canning, curing and packing of various kinds of fish that were valued at \$23,000,000.

Textile Products.—The output of textiles in 1935 was valued at \$357,106,277. The establishments in this group, which numbered 2,275, represented a capital investment of \$329,197,254; they furnished employment to 120,699 persons who were paid \$96,574,954 in salaries and wages, and also spent \$183,920,438 for materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country, the textile group was fourth in 1935 among the ten major groups shown in the summary statistics of Table 3, p. 407, being exceeded only by the wood, vegetable, and iron and its products groups. Textiles accounted for about 13 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1935 to the employment in the Dominion, the group stood second in the number of employees and third in salaries and wages paid, with about 21 p.c. of the total employees in manufacturing and 16 p.c. of the total salaries and wages paid. Again, this wide group of textiles may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group with a gross production of \$185,486,029, while the second division, which usually is the larger, had a production of only \$171,620,248 in 1935.

From the standpoint of gross value of production, cotton yarn and cloth in 1935 was again the leading industry in the textile group. The output was valued at \$59,378,664 while the persons employed numbered 18,121 and the salaries and wages paid totalled \$13,206,265.

The hosiery and knitted goods industry is also worthy of special mention. From the standpoint of employment and salaries and wages paid, it was first in 1935, employing 18,511 persons and paying \$14,252,653 in salaries and wages. Despite the depressed condition of the textile industry generally, the volume and value of production of this branch of the industry held up remarkably well, the value of production being only 23.2 p.c. lower than the peak year of 1929 while the volume was actually 4.5 p.c. higher. Employment, however, declined by 537 or 2.8 p.c. since 1929.

The outstanding feature of the textile situation in Canada has been the great expansion of the silk industry during the past few years, at a time when practically all other industries were experiencing a diminishing demand for their products. While other industries have to struggle hard to regain the 1929 level of production, this industry has since then recorded an increase of 24 p.c. in capital investment, 131 p.c. in number of employees, 119 p.c. in salary and wage payments, 80 p.c. in cost of materials and 93 p.c. in gross value of production.

Wood and Paper.—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early pioneering times the sawmill has formed one of the first steps from the pioneering

community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used, directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work during part of the year for at least 200,000 individuals, largely during the season when employment in manufacturing industries is at its minimum. This has a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft. b.m., has never been equalled. It was followed by a general decline to the 2,869,000 M reported for 1921. A second peak of 4,742,000 M was reached in 1929. Production then decreased annually to a minimum in 1932 amounting to 1,810,000 M. There were increases in 1933, 1934, and 1935.

The manufacturing industries that draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of \$146,950,000 and then declined to \$52,289,642 in 1933 but increased to \$57,860,721 in 1934 and to \$64,802,326 in 1935.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position up to 1935, when it was displaced by the non-ferrous metal smelting and refining industry. In employment and salaries and wages paid, pulp and paper is still, however, the dominant industry. The peak of production was reached in 1929 when 4,021,000 tons of wood pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp and paper mills in operation, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than \$13,000,000. During 1926, Canada, for the first time, produced more newsprint than the United States and has maintained the leadership in spite of decreases in production. During 1935 this industry produced 3,868,341 tons of pulp, the highest production since 1929, and 3,280,896 tons of paper, an all-time record. Of this paper, 2,765,444 tons was newsprint, more than three times the production of the United States.

The manufacturing industries which draw their principal raw material from the pulp and paper mills reached their maximum production of \$187,882,000 in 1929. In 1934 production was \$139,108,400 and in 1935, \$147,801,647.

Iron and Its Products.—The manufacture of iron and steel and their products is one of Canada's basic industries. In 1935 over half a billion dollars was invested in the 1,249 establishments in this line of business, 95,000 persons were given employment and the payroll amounted to \$110,000,000. Gross production was valued at \$390,000,000, a figure which was just a little more than half of the value reported for 1929.

Although ore for the manufacture of iron has not been mined in Canada for some years, there exists a primary industry of considerable size. There are now four concerns which make pig iron, one being in Nova Scotia and three in Ontario. The former company uses Nova Scotia coal and iron ore from the great Wabana deposits, which it controls, on Bell island, Newfoundland. The other concerns import ore and coal from the United States. These companies have 10 blast furnaces available for use which, if operated at capacity, could produce 1,500,000 long tons of pig iron annually. They also operate open-hearth steel furnaces and

rolling mills to make steel ingots, blooms and billets, merchant and alloy steel bars, rails, structural shapes, plates, sheets, rail fastenings, etc. Including a number of other steel furnaces and rolling mills there were 30 steel-making plants in operation in 1935 and 13 rolling mills. Factory sales of pig iron, steel, ferro-alloys, and rolled products were valued at \$39,000,000.

Among the secondary or fabricating industries the manufacture of automobiles takes first place. It is one of Canada's largest industries. In 1935 there were 20 manufacturing or assembling plants in operation, employees numbered 13,095 and products advanced \$30,000,000 in value to \$106,624,445. The number of cars and trucks made was 172,877 of which about 40 p.c., or 69,348, were for export. The 1935 production was the highest since 1929 when 262,625 cars were made in Canada. The making of automobile parts occupied 82 establishments and 6,614 employees in 1935 and production was valued at \$32,684,252, an advance of \$8,000,000.

All other industries in the group showed gains, the value of output in the railway rolling-stock industry advancing to \$41,200,000 from \$34,300,000; the machinery industry to \$32,800,000 from \$26,000,000; the farm implements industry to \$13,700,000 from \$8,800,000; the castings and forgings industry to \$38,800,000 from \$35,100,000; bridge and structural steel industry to \$7,600,000 from \$4,700,000; sheet metal products industry to \$33,600,000 from \$30,900,000; the hardware and tools industry to \$16,000,000 from \$13,600,000; wire and wire products to \$16,200,000 from \$14,700,000; the increases in the other groups, including the boilers, tanks and engines industry, the bicycle industry, and the miscellaneous iron and steel industry, being less than one million dollars in each case.

Non-Ferrous Metals.—Production during 1935 from this group of manufactures based on non-ferrous metals was valued at \$288,523,250 compared with \$237,233,670 in 1934 and \$233,545,666 in 1929, previously the best year on record.

A total of 505 factories were in operation in this group in 1935 as against 487 in 1934, but the capital employed declined \$1,900,000 to \$261,625,967. The number of persons employed increased to 33,613 from 30,177 in 1934 and salaries and wages advanced to \$40,315,477 from \$35,097,986. The cost of materials and supplies used during 1935 was \$174,906,971 as against \$119,713,328 in 1934 and the cost of fuel and electricity advanced to \$5,717,809 from \$5,364,840.

For purposes of the annual Census of Manufactures the makers of non-ferrous metal products have been classified under 7 main industries in accordance with the nature of their main products. All but one of these industries reported a gain in output value in 1935 compared with 1934. In the non-ferrous smelting and refining industry the gain was \$36,000,000, or 24 p.c., to \$186,245,658; electrical apparatus increased \$11,000,000, or 22 p.c., to \$61,152,834; white metal alloys gained 18 p.c. to \$6,182,402; aluminium products gained 33 p.c. to \$4,992,640; and the miscellaneous industry increased 27 p.c. to \$1,170,035. The brass and copper products industry showed a slight decline in output value to \$19,187,022.

Non-Metallic Minerals.—This group of manufactures includes such leading industries as coke making, oil refining, and the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1935 show that the output for this group amounted in value to \$176,184,717 which is 6 p.c. above the corresponding total for 1934 but 27 p.c. below 1929.

The petroleum refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from the United States or South America. In 1935 there were 45 refineries

operating at advantageous points across the Dominion; these units used 1,196,411,-443 gallons of crude oil and produced refined commodities worth \$79,176,081. About 4,800 people were employed and capital invested was \$64,012,045.

Forty-four coke and gas plants, representing an investment of \$99,000,000, made products worth \$33,474,789. Aerated waters, glass, cement, lime, salt, brick, dressed stone, cement products, and asbestos goods were also made in this group.

Chemicals and Allied Products.—Production of chemicals and allied products in 1935 was valued at \$118,574,228 at factory prices. This total, which was higher than in any year since 1930, was about 9.7 p.c. above the 1934 value of \$108,052,039 and 27.7 p.c. above the corresponding figure of \$92,820,761 in 1933. The gain in employment over 1934 was 10.5 p.c. and salaries and wages increased 13.3 p.c.

The improvement in 1935 was quite general with 13 of the industries showing substantial advances and one reporting a small decline. The gains were as follows: coal tar distillation, 30 p.c. to \$2,606,338; acids, alkalies, and salts, 15 p.c. to \$19,012,615; compressed gases, 9 p.c. to \$3,077,765; fertilizers, 11 p.c. to \$6,075,616; medicinals, 9 p.c. to \$21,292,751; paints, 9 p.c. to \$20,341,407; soaps, 17 p.c. to \$16,002,048; toilet preparations, 0.6 p.c. to \$6,017,944; inks, 19 p.c. to \$2,886,853; wood distillation, 4 p.c. to \$805,756; adhesives, 9 p.c. to \$1,436,259; polishes, 11 p.c. to \$2,149,239, and the miscellaneous industry, 2 p.c. to \$8,332,123. The value of explosives, etc., at \$8,537,514 was 6 p.c. less than in 1934.

The number of operating establishments in 1935 was 734 compared with 736 in 1934; the number of employees rose to 18,933 from 17,130, and salaries and wages increased \$2,700,000 to \$23,715,305. Capital employed was slightly less in 1935 at \$147,472,534.

About 52 p.c. of the factories, or 387, were located in the province of Ontario; their production totalled \$69,304,933, or 58 p.c. of the Canada total and their employees numbered 9,912, or 52 p.c. of the total. Quebec's 219 establishments gave work to 6,806 persons and made products worth \$34,767,941.

Many chemical products are also made in industries which, for statistical purposes, are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products, and artificial abrasives are classified in other groups.

Central Electric Stations.—The generation of power by central electric stations, which is of such vital importance to the development of manufactures in Canada, has increased very rapidly since the Great War. The output in 1919, the first year for which statistics have been compiled, amounted to 5,500,000,000 kilowatt hours and by 1930 had grown to 18,000,000,000 kilowatt hours. In spite of a temporary set-back occasioned by the general contraction in industrial production, the output for 1935 reached a new high record of 23,300,000,000 kilowatt hours. The pulp and paper industry is the largest user of electric energy. During 1935, this industry purchased 9,400,000,000 kilowatt hours from central electric stations, or about 40 p.c. of the total output. Other large users of electric energy are: the primary iron and steel industry, non-ferrous metal smelting, and acids, alkalies, and salts establishments. Approximately 8 p.c. of the total output of central electric stations in 1935 was used for residence lighting and other domestic services, while 6 p.c. was exported to the United States.

The growth of central electric stations is also strikingly illustrated in the increase since 1919 of 250 p.c. in the capital investment, which in 1935 totalled \$1,459,821,168 or 31 p.c. of the total for all industries. This industry is also unique in that there are no expenditures for raw material.

Subsection 2.—Manufactures Classified by the Purpose of the Products.

Production of Manufactured Goods According to the Purpose Classification.—In addition to the classification according to the chief component material of the products used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 10 for the years 1922, 1924, 1926, 1929, 1933 to 1935 in summary form, and for 1935 in more detail.

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the "industrial equipment" group from 17.0 p.c. of the total value of production in 1922 to 18.7 p.c. of the total in 1935, and the increase in "producers materials" from 26.8 p.c. to 30.1 p.c. during the same period. Another significant change is the decline in the "food" group which dropped from a production of 27.1 p.c. to 21.9 p.c. of the total. Whereas in 1922, food products comprised the leading group, in 1935 the production of producers materials ranked first in importance. It should also be noted, however, that the cost of materials in this group is abnormally high. The following other groups have improved their positions since 1922: vehicles and vessels advanced from an output of 6.5 p.c. to 7.7 p.c. of the total value of production; drink and tobacco from 4.0 p.c. to 4.3 p.c.; and books and stationery from 4.0 p.c. to 4.2 p.c. The following groups, in addition to food, declined in importance: the clothing group dropped from 9.5 p.c. to 8.9 p.c.; house furnishings from 2.5 p.c. to 1.9 p.c.; and personal utilities from 2.3 p.c. to 1.5 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1935 was 21.9 p.c. of the output of Canadian manufactures, as compared with an output of only 8.9 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater value of production in the "food" group was due, in part, to the higher cost of raw materials, the value added by manufacture being 14.4 p.c. of the total for all industries in the case of the "food" group and 8.7 p.c. for the "clothing" group. The "clothing" industries also gave employment to 11,963 more persons than the "food" industries, but paid out \$2,500,234 less in salaries and wages.

From the detailed analysis of the food group for 1935 given at the end of Table 10, it will be seen that over 35 p.c. of the 1935 gross production of the group was made up of breadstuffs, and this subdivision accounts for over 40 p.c. of total salaries and wages. Meats and milk products accounted for 22 p.c. and 18 p.c., respectively, of gross production. In all these three major subdivisions the average of wages and salaries was comparatively high, being in the neighbourhood of \$1,000 for the year.

In the clothing industry, on the other hand, only in the fur goods subdivision was the \$1,000 average approximated, but this division accounted for less than 6 p.c. of the gross production of the clothing group.

10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-23, and in Detail for 1935.

Subsection 3.—Manufactures Classified by Origin of the Materials.

Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 11 for the years 1924, 1926, 1929, 1933 to 1935. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons can be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table covers only the short space of the 12 years from 1924 to 1935, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The value added in the manufacture of materials of mineral origin represented 32.5 p.c. of the total value added by manufacture in all industries in 1935. This group advanced from second place in 1924 when the percentage of the total was 27.9. The second largest group from the point of view of value added is that of farm origin which accounted for 27.9 p.c. of the total value in 1935. This group was in first place in 1924 with 30.7 p.c. of the total. The value added by the industries of the forest group, which are third in importance, declined from 23.8 p.c. of the total in 1924 to 18.7 p.c. in 1935. On the other hand, central electric stations bettered their position, the percentages of the totals being 7.6 in 1924 and 9.9 in 1935. The above percentages of values added are based on the old method of computation, whereby the materials only are deducted from the gross value of products. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, growing dependence of the construction industry upon large quantities of steel, cement, and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus, and other finished products of mineral origin.

In the year 1935, the industries of the farm group exceeded those of any other group in the gross value of products with 35.1 p.c. of the total, as compared with 34.3 p.c. for the mineral and 15.4 p.c. for the forest origin group. These three principal groups stood in the same order of importance with regard to the number of persons employed. In salaries and wages paid, the mineral origin group ranked first, followed by the farm origin and forest origin groups. In the matter of capital

invested, central electric stations led with 31.1 p.c. of the total, followed by the mineral group with 26.8 p.c., the forest group with 18.4 p.c. and the farm group with 17.8 p.c.

¹ See footnote 1 to Table 1, p. 405. Net values are not available for the origin classification. ² This origin classification included in former years "silk mills" with a small number of artificial silk establishments. Of late years the latter have become the most important and the statistics are now combined with those for "mixed origin".

Subsection 4.—The Forty Leading Manufacturing Industries.

A prominent feature of Canadian manufacturing development in recent years has been the growth of non-ferrous metal smelting. This industry, based upon mineral resources, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The central electric stations and dyeing, cleaning and laundry industries are not now included among manufacturing industries. The change was made for the year 1936 and the figures of rank in the statement below have been made comparable by dropping central electric stations for each of the years.

In the following statement, the rank of the ten leading industries in 1936, from the standpoint of gross value of production, is compared with their respective ranks in representative years since 1922.

THE TEN LEADING INDUSTRIES, 1936, COMPARED AS TO RANK FOR REPRESENTATIVE YEARS 1922-35.

Industry.	Rank in—						
	1936.	1935.	1934.	1933.	1929.	1926.	1922.
Non-ferrous metal smelting and refining..	1	1	2	2	9 10	9	37
Pulp and paper.....	2	2	1	1	1	1	2
Slaughtering and meat packing.....	3	3	3	3	2	3	3
Flour and feed mills.....	4	6	4	4	3	2	1
Butter and cheese.....	5	5	5	5	6	6	5
Automobiles.....	6	4	7	11	4	5	6
Petroleum products.....	7	7	6	6	10	11	9
Sawmills.....	8	8	11	14	5	4	4
Electrical apparatus and supplies.....	9	9	14	16	8	13	16
Cotton yarn and cloth.....	10	11	8	8	13	8	7

The incidence of the depression resulted in a re-arrangement in the rank of many industries which has already proved temporary in some cases. The suspension or curtailment of capital expenditures greatly reduced the output of such important industries as: sawmills, electrical equipment, automobiles, railway rolling-stock, primary iron and steel, machinery, etc. On the other hand, the demand for goods for immediate consumption was more stable, including such industries as: petroleum products, bakeries, cotton yarn and cloth, printing and publishing, clothing, tobacco, beverages, etc. However, as previously stated, some return to the pre-depression order of importance is in evidence. Comparing the rankings for 1936 with those for 1935, it may be noted that flour and feed mills came up from sixth place to fourth place, whereas just the opposite was true of automobiles. All other industries, among the leading ten, held their relative positions with the exception of cotton yarn and cloth which ranked as eleventh in 1935 but was tenth in 1936, replacing bread and other bakery products. Railway rolling-stock improved its position from seventeenth in 1935 to fourteenth in 1936. On the whole, however, the changes for the latest year are not very pronounced.

12.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1935.

Industry.	Establishments.	Capital.	Employees.	Salaries and Wages.	Cost of Materials.	Value of Products.

12A.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1934.

NOTE.—The central electric stations and dyeing, cleaning and laundry industries ceased to be regarded as 'manufacturing' industries for 1934, and figures for previous years will be adjusted as soon as possible. This affects the comparability of the figures given in this table in comparison with those of earlier years.

Industry.	Estab-lish-ments.	Capital.	Em-employees.	Salaries and Wages.	Cost of Materials.	Value of Products.

Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1935 amounted to \$2,244,583,270 or nearly 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coal-fields of Pennsylvania, the water-power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1935 the third largest gross manufacturing production, with 7.1 p.c. of the total, and Manitoba the fourth with 4.2 p.c. Alberta, Nova Scotia, New Brunswick, Saskatchewan, and Prince Edward Island followed in the order named.

Subsection 1.—The Manufactures of the Maritime Provinces, 1935.

Table 13 gives the statistics of each of the Maritime Provinces for the year 1935. In Prince Edward Island, fish canning and curing, with a gross production of \$633,242 was foremost, followed by butter and cheese, slaughtering and meat packing, central electric stations, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, dominated to a considerable extent by the steel and forest industries in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of \$14,860,796 in 1935, was the most important industry in New Brunswick, followed by sawmills with an output of \$4,453,221, central electric stations with an output of \$3,233,679, the coffee, tea and spice industry with an output of \$2,803,886, and fish canning and curing with a value of production of \$2,462,790. These five industries combined provided 49.4 p.c. of the gross manufacturing production of the province. In Nova Scotia, primary iron and steel was in first place. This industry was so severely affected by the depression that in 1933 it was only in fourth place, but it recovered first place in 1934 and maintained this position in 1935. The increase in production was about 112 p.c., from \$3,763,242 in 1933 to \$7,987,949 in 1935. Other leading industries with their values of production were: fish curing and packing, \$5,368,117; central electric stations, \$5,096,453; pulp and paper, \$4,331,670; sawmills, \$2,276,841; butter and cheese, \$2,120,922.

¹ Net value is derived from gross value by deducting costs of materials, fuel, and electricity. Figures are not available for these individual industries.

² Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, castings and forgings, and sheet metal products; in Nova Scotia, petroleum products, sugar refineries, coke and gas products, wire and wire goods and cotton yarn and cloth; in New Brunswick, sugar refineries, railway rolling-stock, and cotton yarn and cloth.

Subsection 2.—The Manufactures of Quebec, 1935.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of \$78,701,994 in 1935. This exceeded by nearly \$31,000,000 the total value produced by central electric stations (\$47,808,550), the industry which ranked second in importance. This was followed by non-ferrous metal smelting and refining (\$45,565,844), cotton yarn and cloth (\$41,660,189), tobacco, cigars, and cigarettes (\$33,358,806), women's factory clothing (\$32,912,629), butter and cheese (\$27,625,840), petroleum products (\$23,157,263), men's factory clothing (\$22,686,491), and slaughtering and meat packing (\$22,087,549). A change took place in the ranking of some of the more important industries of the province. Non-ferrous metal products advanced from fourth to third place, petroleum products from ninth to eighth and men's factory clothing from tenth to ninth. Cotton yarn and cloth dropped from third to fourth place and slaughtering and meat packing from eighth to tenth.

The importance of the pulp and paper industry in Quebec is shown by comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about 10 p.c. of the total gross value of all products manufactured in the province, furnished 48 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 70 p.c., the value of railway rolling-stock 44 p.c., the value of tobacco, cigars, and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

14.—Principal Statistics of the Leading² Industries of the Province of Quebec, 1935.

Industry.	Estab- lish- ments.	Capital. \$	Em- ployees No.	Salaries and Wages. \$	Cost of Materials. \$	Gross Value of Products. ¹ \$

² Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

Subsection 3.—The Manufactures of Ontario, 1935.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1935 represented about 51 p.c. of the total for the whole Dominion, while that of Quebec, the second province in importance in this respect, amounted to about 29 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia, and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The value of manufactured products totalled \$1,423,562,474 in 1935. In value of production, automobiles headed the list with an output valued at \$105,810,655. Other leading industries in the order of their importance were: non-ferrous metal smelting and refining \$105,035,029, slaughtering and meat packing \$56,932,181, central electric stations \$53,535,095, flour and feed mills \$51,760,071, pulp and paper \$51,041,765, electrical apparatus and supplies \$47,503,325, rubber goods including footwear \$46,466,350, and butter and cheese \$44,221,126. Some significant changes took place in the ranking of the leading industries. The automobile industry regained the dominant position held for several years prior to the depression and non-ferrous metal smelting and refining, which led all industries for the first time in 1934, dropped to second place. Central electric stations moved up from seventh to fourth place and electrical apparatus from ninth to seventh.

The turning point of the depression was reached in the summer of 1933. The increases in the latter part of the year, however, were not sufficiently pronounced to offset the losses of the beginning of the year. The result was that the principal statistics for 1933 were the lowest since 1929. Considerable improvement was reported for 1934 and again for 1935, although to a lesser degree in the latter year. Compared with 1934 there was in 1935 an increase of 8.4 p.c. in the number of employees, with a greater increase in the amount paid out in salaries and wages, namely, 12.1 p.c. The increase in the value of production was 13.4 p.c. and in the value added by manufacture 9.4 p.c.

The depression was particularly hard on industries producing capital or durable goods, and these constitute an important factor in the manufactures of Ontario. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted not only in a drop in the rank of such industries within the province, but in a lowering of the manufacturing production of the whole province relatively to that of other provinces less affected by these influences. Since 1933, however, these industries in general have made a good recovery, and Ontario, which accounted for 48 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1935 increased the relative value to 51 p.c.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments reporting. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage

which the production of each bore to that of the Dominion in 1935, were as follows: agricultural implements, 96 p.c.; leather tanneries, 88 p.c.; rubber goods, 83 p.c.; furniture and upholstery, 63 p.c.; fruit and vegetable canning, preserving, etc., 68 p.c.; electrical apparatus and supplies, 78 p.c.; castings and forgings, 68 p.c.; primary iron and steel, 65 p.c.; slaughtering and meat packing, 43 p.c.; flour and feed mills, 53 p.c.; hosiery and knitted goods, 65 p.c.

Subsection 4.—The Manufactures of the Prairie Provinces, 1935.

The slaughtering and meat packing industry in 1935 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1935, as may be seen from Table 16, the gross value of production of this industry

was \$44,421,578 (Manitoba \$21,832,403, Saskatchewan \$6,500,945, and Alberta \$16,088,230). The second industry, from the point of view of gross value of production, was flour and feed mills with products valued at \$31,912,049 (Manitoba \$7,400,427, Saskatchewan \$12,785,321, and Alberta \$11,726,301). Butter and cheese comprised the third largest group, with an output valued at \$20,472,766, followed by central electric stations \$15,884,005, petroleum products \$14,774,603, railway rolling-stock \$12,099,233, etc.

The order of the leading industries is somewhat different in each province. In Manitoba the leading industries with their gross value of products in 1935 were as follows: slaughtering and meat packing \$21,832,403, railway rolling-stock \$9,264,003, butter and cheese \$7,602,065, flour and feed mills \$7,400,427, and central electric stations \$6,729,818. In Saskatchewan the leading industries were: flour and feed mills \$12,785,321, butter and cheese \$6,557,615, slaughtering and meat packing \$6,500,945, petroleum products \$5,683,815, and central electric stations \$4,377,205. In Alberta slaughtering and meat packing with an output of \$16,088,230 was the leading industry. This was followed by flour and feed mills with \$11,726,301, petroleum products \$7,791,296, butter and cheese \$6,313,086, and central electric stations \$4,776,982.

The importance of these industries, based mainly on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

¹ See footnote 1 to Table 13.² Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba and Saskatchewan, non-ferrous metal smelting and refining, and, in Alberta, sugar refining, wool preservation, and malt and malt products. The statistics of the three industries of Alberta are included under the heading "All other leading industries".

Subsection 5.—The Manufactures of British Columbia,* 1935.

British Columbia was, in 1935, the third most important manufacturing province in the Dominion, producing goods with a gross value of \$198,106,542. About 18 p.c. of this production, or \$35,713,189, is seen in Table 17 to be that of the sawmilling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added \$13,141,602, the value of the pulp and paper industry which ranks third. Second in importance among the industries of the province is that of fish curing and packing with a gross value of production of \$14,421,861. As previously stated, pulp and paper occupied third place, and this was followed by central electric stations with \$11,278,402, petroleum products \$9,229,363, and slaughtering and meat packing \$8,339,127.

* Including the Yukon Territory.

Percentages of above industries to totals of all industries in the province.....	73.9	91.9	86.4	87.1	89.9	89.6

¹ See footnote 1 to Table 13.² In this group, individual statistics cannot be published, because there are fewer than three establishments in each industry. Such industries are: biscuits, confectionery, cocoa and chocolate; distilleries; sugar refineries; castings and forgings; non-ferrous metal smelting and refining; explosives, ammunition and fireworks; and paints, pigments and varnishes.

Section 4.—Principal Factors in Manufacturing Production.

Subsection 1.—Capital Employed.

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1935 in all establishments, irrespective of the number of employees, was \$4,698,991,853 as compared with \$4,703,917,730 in 1934 and with \$2,696,154,030 in 1917, an increase of 75 p.c. in 18 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario in 1917 was 48.3 p.c. of the total, 52.4 p.c. in 1923, and 44.0 p.c. in 1935. The percentages employed in the plants of Quebec were: 29.4 in 1917, 29.5 in 1924, and 35.4 in 1935. British Columbia held third place in 1935 with a capital investment of 7.9 p.c. of the total,

while Manitoba, Nova Scotia, New Brunswick, Alberta, and Saskatchewan followed in the order named, with proportions varying between 4.2 p.c. and 1.4 p.c. (Table 18.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led again in 1935, with an investment of 31.1 p.c. of the total. The wood and paper group was second with 18.6 p.c., the iron and its products group third with 11.8 p.c. and the vegetable products group fourth with 10.6 p.c. Up to 1930, the wood and paper group had been first since 1919 in capital invested, but since 1931 the central electric stations group has assumed the premier position.

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1923, land, buildings, machinery, and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1935 to 74 p.c. The fixed assets amounted to \$3,485,074,067 in 1935, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash, and sundries, were valued at \$1,213,917,786. Details by provinces and industrial groups are given in Table 19.

Subsection 2.—Employment in Manufactures.

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1935 was in that year 582,874, as compared with 493,903 in the same industries in 1933 and 694,434 in 1929. The 1935 employees included 105,579 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 477,295 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries

but also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method had a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the old method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year; actually there was a decrease, this apparent increase being attributable in part to a decrease in the number of wage-earners.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 20. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see p. 415 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has accomplished a large increase in production with a comparatively small increase in wage-earners, by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 38.0 p.c. from 1917 to 1935, compared with a decrease of 14.5 p.c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 9 in 1935. The factor of better organization is not susceptible of measurement. However, salaried employees have increased 52 p.c. since 1917, or more nearly in proportion to the growth in production than wage-earners. The result of these developments has been the increase of 59.5 p.c. in the volume of production per wage-earner and a smaller increase of 47.3 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency in 1921 and 1922 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time. During the recent depression years the reduced volume of production lowered the indexes of efficiency.

Statistics of employment in manufacturing industries during 1935, derived from the Census of Manufactures, are shown in Table 24. According to these statistics, the 25,491 establishments covered, employed 105,579 salaried employees and 477,295 wage-earners, a total of 582,874 persons. Out of every 1,000 persons employed in manufacturing, 181 were classed as salary earners and 819 as wage-earners; the former earned 29 p.c. and the latter 71 p.c. of the total amount paid out as remuneration for services.

20.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-35.

NOTE.—Employees of central electric stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

Distribution of Employees in 1935.—An analysis of the returns by provinces shows that 53,989 or 51.1 p.c. of all the employees on salaries were employed in Ontario; of this number 40,649 were males and 13,340 were females. The province of Quebec with 30,656 persons or 29 p.c. of the total, recorded the second largest number of salaried workers; of these 24,246 were males and 6,410 females. British Columbia ranked third with 6,484 or 6.2 p.c. of the total salaried employees.

Of the wage-earners employed numbering 477,295, 47.6 p.c. were employed in Ontario, 33.3 p.c. in Quebec and 6.8 p.c. in British Columbia. It is interesting to note that out of every 1,000 salaried employees 223 were females, while in the case of wage-earners 232 out of every 1,000 were females.

The wood and paper industries, with 24,892 salaried employees, reported a larger number than any other group, having 23.6 p.c. of the total. The vegetable products group came next with 16,089 salaried employees or 15.2 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 319 were females, as compared with only 209 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 107,594 or 22.5 p.c. of the total. This was followed by the wood and paper products group, with 98,832 wage-earners or 20.7 p.c. of the total. It is also of interest to

note that out of every 1,000 wage-earners in the textile industries 550 were females, while in all the other groups 139 were females. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 47.3 p.c. were found in the textile group.

Monthly Record of Employment in Manufactures.—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 22 for representative years 1922 to 1935 and by sex for certain of the years. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 in 1931, 417,685 in 1932, 429,018 in 1933, 462,444 in 1934, and 496,510 in 1935. In July, 1933, employment took an upward swing; for the first time since 1929 the number of wage-earners on the payroll was higher than that for the corresponding month of the previous year. The improvement has been generally maintained since then.

Hours Worked by Wage-Earners.—The number of wage-earners working specified numbers of hours per week in the month of highest employment in 1932 to 1935 and in detail by provinces, industrial groups and in the forty leading industries for 1935 is shown in Table 23. An explanation should be made of the term "month of highest employment" as used in connection with this table. Each firm is required to report the number of hours per week worked by its wage-earners during the month in which the greatest number were employed. It therefore happens that, in the case of one firm, the month of highest employment might be May, while in that of another firm October might be the month of highest employment. The month of highest employment as shown in the following table, therefore, does not refer to any particular month but represents the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is of more significance, as in this case it coincides for a great number of the firms engaged in the same industry.

Average hours worked per week in 1935 for all industries totalled 48.7 as compared with 49.1 hours in 1934, 48.2 hours in 1933, and 48.5 hours in 1932. The number of hours worked per week is affected both by business conditions and by changes due to government legislation and union demands. In times of depression the average number of hours per week is reduced, due to the policy of some employers of spreading the available work over as many employees as possible. With the return of better times the number of hours worked by each employee is naturally increased. This increase is, however, offset by the reduction in hours through legislative enactments and union agreements. As a result of these two factors, the tendency in employment, over a short period of time at least, cannot be ascertained directly from the statistics given in the tables following.

For Canada as a whole, 36 p.c. of the wage-earners worked under 48 hours in 1935, 23 p.c. worked 48 hours, 19 p.c. worked between 49 and 54 hours, while 22 p.c. worked 55 hours or over.

23.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment from 1932 to 1935 and in Detail by Provinces, Groups, and the Forty Leading Industries, 1935.

NOTE.—These are the regular hours worked per week and do not, therefore, include overtime.

Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries.

The total salaries and wages disbursed by manufacturers in 1935 was \$590,326,904 paid to 582,874 workers, compared with \$813,049,842 paid to 694,434 persons in 1929 and \$509,382,027 paid to 621,694 persons in 1917. Of the 1935 aggregate, \$173,020,195 or 29 p.c. was paid to 105,579 salaried employees who constituted 18 p.c. of the total number, and \$417,306,709 or 71 p.c. was paid in wages to 477,295 wage-earners, who formed 82 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1935 was \$1,639, compared with \$1,982 in 1930 and \$1,299 in 1917, while the average wage in 1935 was \$874, compared with \$785 in 1933, \$1,045 in 1929 and \$760 in 1917. Thus during the eighteen years since 1917, average salaries have increased by 26 p.c., while average wages have increased by only 15 p.c. (See Table 25.)

Average Earnings, by Provinces and Industrial Groups.—In 1935, Ontario showed the highest average salary of \$1,695, followed by Quebec with \$1,646, British Columbia with \$1,609, and Manitoba with \$1,547. The head offices of many large corporations being located in Montreal, Toronto, Vancouver, and Winnipeg tends to raise the average salaries in the provinces in which these cities are situated. In the other provinces the averages were smaller, the lowest being in Saskatchewan. No regional tendency is observable in salary payments as the following averages for 1935 show: New Brunswick \$1,482, Alberta \$1,423, Nova Scotia \$1,344, and Saskatchewan \$1,274.

British Columbia, with average wages paid of \$1,005 per annum, was the highest in 1935, being \$131 higher than the general average. In the western provinces average wages are usually higher, due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while, in addition to this, Quebec also has a larger proportion of female wage-earners (employed chiefly in the textile, food, and tobacco industries), than any other province, except Prince Edward Island.

The highest average salary, *viz.*, \$1,338, was reported by the non-ferrous metal products group, while the animal products group, with an average salary of \$1,400 in 1935, was the lowest. In wages paid, central electric stations came first with an average of \$1,281, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of \$698, due to the fact that in this group about 55 p.c. of the wage-earners were females. As is stated at the top of p. 451, of all the female wage-earners employed in the manufacturing industries of Canada, over 47 p.c. found employment in the textile industries.

Average Earnings in the Forty Leading Industries.—Table 25 shows employees by sex and the average salaries and wages paid in the forty leading industries during 1935, together with average salaries and wages paid in 1934. The rank of each industry is based on the aggregate salaries and wages paid.

In only ten industries did the average salaries exceed \$2,000; in fifteen they ranged from \$1,700 to \$2,000; in seven they ranged from \$1,500 to \$1,700; while in the remaining eight they were below \$1,500. None of the six industries paying the highest salaries—sugar refining \$2,779, pulp and paper \$2,379, leather tanneries \$2,361, non-ferrous metal smelting and refining \$2,199, breweries \$2,173, and petroleum products \$2,108—reported a proportion of female salaried employees equal to the general percentage of the forty leading industries. The lowest salaries were reported by the sawmilling, butter and cheese, and bread and other bakery products industries.

The highest wages, those above \$1,200, were paid in seven industries—non-ferrous metal smelting and refining \$1,327, petroleum products \$1,323, automobiles \$1,321, coke and gas products \$1,282, central electric stations \$1,281, printing and publishing \$1,275, and primary iron and steel \$1,247—in all of which the proportion of skilled workers is probably high. In seven other industries average wages ranged from \$1,000 to \$1,200. These were: sugar refining \$1,150, pulp and paper \$1,143, breweries \$1,138, railway rolling-stock \$1,040, automobile supplies \$1,031, machinery \$1,010, and paints and varnishes \$1,001. In most of these industries the proportion of women workers is low. In thirteen other industries average wages ranged between \$800 and \$1,000, while in the remaining thirteen they were below \$800. This last group includes seasonal industries, such as fruit and vegetable canning, fish curing and packing, and industries which contain a large number of small units in which the work is intermittent, such as feed mills. Other industries with low average wages were: textiles, tobacco, and boots and shoes, in which the proportion of female wage-earners is high, the number in several of these industries being greater than those of the male.

25.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1935, together with Comparative Figures of Average Salaries and Wages Paid in 1934, and Totals and Averages Paid in Representative Years 1917-35.

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

1 See headnote to Table 26, p. 458.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 24.2 p.c. between 1917 and 1935. The details of the computation are given in Table 26. There was little change in real wages during the three years 1917 to 1920, when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased by 6 p.c. From then until 1931 there was a definite and almost continuous upward trend. In 1931 real wages reached 120.2 and then declined to 113.8 in 1933 and rose again to 124.2 in 1935, the highest on record.

26.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-35.

NOTE.—The figures of average numbers of wage-earners and average earnings for the years 1931 to 1935 are strictly comparable with those for the years prior to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries. (See footnote 1 to Table 4, p. 411.)

Percentages of Wages and Salaries to Value of Products.—Table 27 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, repairs, and all other overhead charges that must be ordinarily met. The percentage of salaries was highest in the years 1931 to 1935. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower levels of production then prevailing. The percentage declined steadily with the increasing manufacturing production maintained during the period 1924 to 1929, while from 1931

to 1935, due to decreased industrial activity, the percentage of salaries to value added rose to 13.4, 15.0, 14.5, 13.2, and 13.3, respectively. It should be borne in mind, however, that salaried employees increased 38.5 p.c. during the period 1924-35 while wage-earners increased but 10.4 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The percentage of wages to the values added in manufacture was thus only 3.5 p.c. lower in 1935 than in 1924. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table 26) and the efficiency of production lowest (Table 20).

In previous reports on manufactures the percentage of wages and salaries paid to the value added by manufacture was carried back to 1917. Under the new method of calculating the value added, whereby the cost of materials plus fuel and electricity is deducted from the gross value of the products, it is possible to go back to 1924 only. Under the old method of calculating the value added by manufacture only the cost of the materials used was deducted from the gross value of the products.

Subsection 4.—Size of Manufacturing Establishments.

A modern characteristic of industry in all industrial countries has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: firstly, they depend on the fluctuation of business

activity and the demand of the consumer; secondly, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census. Since 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations, as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as statistics of cities and towns.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over a million dollars dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. Due to the elimination of central electric stations, the figures since 1932 are not directly comparable with those for 1929 or 1922.

28.—Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1931, and 1935.

¹ The value of production in 1929 shown above is greater in the aggregate by \$34,615,939 than the value of production shown in the other tables of this chapter. This is due to the elimination from the other tables of the value of electric energy purchased by central electric stations from other generating plants for distribution to local consumers. For the reporting plant, however, the cost of such power is regarded as the cost of materials. This necessarily involves a duplication in the value of product for which it is impossible to make compensation as between the groups.

² The figures for 1934 and 1935 do not include central electric stations.

29.—Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1935.

NOTE.—The figures in this table do not include central electric stations.

Size of Establishments as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 it had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). The same also holds true for all establishments employing 101 hands or over. In 1923 they employed 58.5 p.c. of the total, in 1929, 61.9 p.c., and in 1933, 55.7 p.c.

Size of Establishments of Some of the Leading Industries.—The following statement and Table 32 show the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of non-ferrous metal smelting, petroleum products, automobiles, slaughtering and meat packing, and pulp and paper, whereas in the case of butter and cheese, sawmills, and bread and other bakery products, the degree of concentration is but moderate. With regard to flour and feed mills, concentration is marked in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

PERCENTAGE IMPORTANCE OF ESTABLISHMENTS, EACH WITH A GROSS PRODUCTION OF \$1,000,000 AND OVER, IN CERTAIN INDUSTRIES.

Industry.	Number of Such Establishments.	Percentage to Total Number in the Industry.	Percentage of Total Production in the Industry.

⁴ Includes 2 establishments with employees from 21 to 50.

⁵ Includes 2 establishments with employees of 201 to 500.

⁶ Includes 1 establishment with employees of 501 or over.

⁷ Includes 2 establishments with production of \$5,000,000 or over.

⁸ Includes 3 establishments with employees of 201 to 500.

Subsection 5.—Power and Fuel.

Power.—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated, in Table 33, separately from the other groups of industries. Internal combustion engines include all gasoline engines, gas engines (natural, coal, and producer gas), and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

Of the total increase in primary power equipment since 1923, amounting to 5,021,427 h.p., inclusive of central electric stations, 4,541,985 h.p., or 90.5 p.c., was in water power. However, some sections of Canada are not so well provided with water power and in such sections primary power derived from steam engines

and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan, and Alberta, primary power produced from fuels exceeded that from water in 1935. The total installation of electric motors increased 2,071,261 h.p., or 159 p.c., in the 13 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Of the total power equipment installed in the manufacturing industries (first part of Table 33), it will be seen that approximately 50 p.c. is used in the manufacture of wood and paper products; the next group in importance is iron and its products, which accounts for a little over 15 p.c.; non-ferrous metal products is third with 9.6 p.c. Together, these three groups account for about 75 p.c. of such installation.

Fuel and Electricity.—Fuel and electricity consumed by the manufacturing industries of Canada in 1935 was valued at \$84,273,129. Of this amount \$43,548,065 was for fuel and \$40,725,064 for electric power. The fuel used in industrial establishments in 1935 included 4,397,580 tons of bituminous coal valued at \$23,642,048, constituting 54.3 p.c. of the total fuel cost. The other chief fuels in order of value were: fuel oil 14.7 p.c., gas (principally manufactured gas) 13.2 p.c., coke 4.5 p.c., wood 3.4 p.c., and anthracite coal 3.0 p.c. Out of a fuel account of \$43,548,065, Ontario's requirements cost \$21,176,658 or 48.6 p.c. of the total; Quebec's cost \$10,887,347; Nova Scotia's, \$3,248,434; and British Columbia's, \$2,415,241.

The groups of industries in which fuel was most extensively used in 1935 were: non-metallic minerals \$8,742,968, wood and paper \$8,664,304, iron and steel products \$7,995,847, and vegetable products \$5,798,332. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick, tile, lime and cement-making, petroleum refining, and the glass industry. In such industries as the manufacture of coke and gas the coal, used as a material which enters into the actual composition of the product, is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table 34.

The total annual expenditure on fuel decreased by \$8,092,847 or 15.7 p.c. in the fourteen years 1921-35 covered by the summary figures in Table 34. During this period prices of fuel generally have declined; thus with an increase of 7.2 p.c. in the quantity of bituminous coal used, the value decreased by 32.0 p.c.

The wood and paper products group is the largest user of electric power, the consumption in 1935 being valued at \$18,068,175 or 44.4 p.c. of the total cost of power used by all manufacturing industries. The iron and its products group ranks second with only 11.3 p.c. of the total. Other principal users were non-ferrous metal products, vegetable products, and textiles.

In the provinces of Quebec and British Columbia the cost of electricity exceeds that of fuel. For Quebec, which is the largest user of electrical power, the electricity used was valued at \$17,761,056 as against \$10,887,347 for fuel, while in British Columbia electric power totalled \$3,649,470 and fuel \$2,415,241. Ontario, which ranks second as a user of electrical energy, expended \$14,896,266 for electricity and \$21,176,658 for fuel.

33.—Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-35, with Details by Provinces and Industrial Groups for 1935.

¹ Cost of electricity for central electric stations excluded.² Not available.³ Does not include cost of electricity.

Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 35, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 92 p.c. of the total, while in British Columbia and the Maritime Provinces, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to 68 p.c. and 67 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few large urban centres.

35.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1935.

NOTE.—Figures published in this table are in some cases higher than those published in Table 37, since in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 37 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

Province.	Cities and Towns with a Gross Production of over \$1,000,000 each.	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each.	Total Production in Cities and Towns Producing over \$1,000,000 each.	Total Production in each Province.	Production in Cities and Towns as a Percentage of Total Production in each Province.

The six chief manufacturing cities of Canada in 1935 were: Toronto, Montreal, Hamilton, Windsor, Vancouver, and Winnipeg. Due to the amalgamation of the border cities, Windsor now ranks among the first six manufacturing centres. Toronto proper exceeded Montreal proper by a slight margin. Greater Montreal, however, is still ahead of Greater Toronto and continues to be the leading manufacturing area in the Dominion. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully employed population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg, and 16 p.c. in Vancouver.

Eighteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1935 were as follows, in descending order of the value of their products: Oshawa, Montreal East, London, Kitchener, Quebec, Calgary, Ottawa, Peterborough, Three Rivers, Sarnia, Edmonton, Brantford, St. Boniface, New Toronto, Niagara Falls, Cornwall, Saint John, and St. Catharines. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 or over and with three or more establishments are given for 1935 in Table 37.

36.—Principal Statistics of the Manufacturing Industries of Five¹ Leading Manufacturing Cities of Canada, 1930 and 1932-35.

NOTE.—Statistics for 1932-35 do not include central electric stations.

CHAPTER XV.—CONSTRUCTION.

Relation of Construction Industry to General Business Conditions.—

The construction and building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed as the result of the introduction of new types of construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Activity in construction is of particular interest not only to those engaged in the industry itself but to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass, and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913 and that between 1926 and 1929, construction contributed in large measure to produce the 'booms' of those years, as is indicated in the figures of Table 6.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 9. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 was reflected in the highest value of construction contracts on record. This was followed by successive declines until 1933,* when the industry reached a very low level of activity. There was some recovery in 1934-36 and a further increase of about 38 p.c. in 1937. However, a very great deficiency in housing and other forms of construction must still remain from the suspension of activity during the depression years, to be overtaken when confidence is restored in the future stability of prices and the permanence of the recovery. To facilitate and encourage this process, the Dominion Housing Act was passed in 1935.

The Dominion Housing Act.—Administered by the Housing Administration Branch of the Department of Finance, the Dominion Housing Act, 1935, has a twofold purpose: (1) to assist in the improvement of housing conditions and (2) to assist in the absorption of unemployment by the stimulation of the construction and building material industries. The Minister of Finance is empowered to make advances and to pay expenses of administering the Act to the extent of \$10,000,000.

* October, 1933, marked the lowest point of activity in this industry.

The Act provides for loans for the construction only of new dwellings (including single-family houses, duplexes, and apartment houses), the security taken being in the form of a first mortgage running jointly to an approved lending institution and to the Dominion Government. In most cases, the loan may be for 80 p.c. of the cost of construction of the dwelling or its appraised value, whichever is the lesser; of a loan of 80 p.c., the lending institution advances 60 p.c. and the Government 20 p.c. The remaining 20 p.c. is provided by the borrower. Provision is also made in certain cases for loans of 70 or 75 p.c., where desired by the borrower or deemed advisable by the lending institution. The interest rate paid by the borrower is 5 p.c. This is made possible by the fact that the Government's funds are advanced on an interest basis of 3 p.c. Loans are made for a period of 10 years subject to renewal for a further period of 10 years upon revaluation of the security and on conditions satisfactory to all parties concerned. Interest, principal, and taxes are payable in monthly instalments. Amortization of principal is effected at a rate sufficient to pay off the loan in 20 years, but more rapid amortizations may be arranged to suit the convenience of the borrower. The Act requires sound standards of construction and contains other clauses safeguarding the mortgage.

The results of operations under the Dominion Housing Act, up to the end of February, 1938, were as follows:—

The Government Home Improvement Plan.—Although operative, by agreement between the Dominion Government and lending institutions, since Nov. 1, 1936, the Home Improvement Plan derives its legislative sanction from "An Act to Increase Employment by Encouraging the Repair of Rural and Urban Homes", assented to on Mar. 31, 1937. The object of the legislation is clearly indicated in its title. The method adopted is to stimulate the advance of money for home repair and improvement by a Government guarantee up to 15 p.c. of the aggregate amount loaned under the Plan by each approved lending institution.

The Plan, which is administered by the Department of Finance, was first sponsored by the National Employment Commission, and the Commission, at the request of the Government, undertook to advance it by all possible methods. Voluntary co-operative committees, provincial and local, were set up in every province. Through the co-operation of Canadian industry, an extensive publicity and adver-

tising campaign was initiated and carried on without cost to the Government. Explanatory booklets and leaflets in both languages were distributed extensively throughout the Dominion, speeches and radio broadcasts were utilized, and, in a number of cities, home improvement exhibitions designed to emphasize the desirability of house repair and modernization were held. From time to time statements indicating the increase in loan totals were issued by the Department of Finance.

The Plan provides for the making of loans by chartered banks and other approved lending institutions to owners of residential property (including farm buildings) for repairs, alterations, and additions (including built-in equipment) to urban and rural dwellings. Loans may be made up to a maximum of \$2,000 on any single-family house. In the case of a multiple-family dwelling the maximum amount which can be borrowed is \$1,000, plus \$1,000 for each family unit provided for in the building when the repairs or improvements are completed. The limit of time allowed for the payment of a Home Improvement loan is three years for a loan of \$1,000 or less, and five years for a loan exceeding \$1,000. Payment may be made in equal monthly instalments or in such other instalments as are adapted to the financial circumstances of the borrower. The maximum charge must not exceed a rate of discount of $3\frac{1}{2}$ p.c. for a one-year loan, repayable in equal monthly instalments. This is equivalent to an effective interest rate of 6.32 p.c.

The limit of the aggregate loans is \$50,000,000 and the limit of the Government's guarantee is therefore \$7,500,000.

Loans made under the Government Home Improvement Plan to Feb. 28, 1938, by provinces, were as follows:—

Industrial Statistics of Construction.*—The census of construction had its inception in 1934 and figures were collected in 1935 covering the calendar year 1934. Statistics for that year were presented at pp. 473-474 of the 1936 Year Book, and those for 1935 were shown at pp. 476-479 of the 1937 Year Book. No attempt at comparisons with 1934 was made, as the figures for the two years were not strictly comparable. With the completion of the 1936 figures, comparable statistics are now available covering the years 1935 and 1936, and a summary of the principal statistics is given in Table 1.

* Revised by F. I. Tanner, Officer in Charge of Construction Statistics.

Another matter which should be pointed out is that no relationship exists between the total value of construction, shown for 1936 below, and the value of contracts awarded as indicated on p. 479. In the latter case all values are included as soon as awards are made irrespective of whether the contract is completed or even begun in that year, whereas the tables below cover construction work carried on and actually performed in 1936.

1.—Principal Statistics of the Construction Industry in Canada, 1935 and 1936.

Table 4 classifies the various types of construction carried out in 1936. The item "trade construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information on the industry than it is possible to include in the limited space available here, will be found in the Bureau's report on the construction industry for 1936.

Table 5 shows the employment and wage-earnings for the construction industry, by provinces. The employment figures, shown on a monthly basis, reflect the fact that the industry is not so decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1936, was August with 163,758 wage-earners and the lowest was January with 71,807.

Contracts Awarded.—A record of contracts awarded during the years 1911-37, as compiled by MacLean Building Reports, Ltd., is given in Table 6. The aggregate for 1937 was greater than in any year since 1931, and showed an increase of 37.8 p.c. over 1936. It amounted, however, to only 38.9 p.c. of the record year, 1929.

Engineering contracts accounted for 35.1 p.c. of the total value of the contracts awarded in 1937, residential buildings for 25.1 p.c., industrial buildings for 15.1 p.c., and business buildings for 24.7 p.c. As compared with 1936, residential building showed an increase of 31.1 p.c. in value, engineering projects of 17.6 p.c., business construction of 46.3 p.c., while industrial construction increased to the extent of 125.6 p.c. Table 7 shows in some detail the value of the construction contracts awarded in the latest six years.

Building Permits.—The estimated value of construction in 58 cities of Canada, as indicated by their building permits, is shown for the years 1932 to 1937, inclusive, in Table 8. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1937 building permits aggregated \$55,844,999 or 25 p.c. of the total contracts awarded, as shown in Table 6. In Table 8, the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (*), and the totals for these cities are given beneath the totals for the wider group.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1937 as shown in Table 7 increased by 37.8 p.c. compared with 1936 and the building permits of 58 cities in Table 8 increased by 35.1 p.c.

8.—Values of Building Permits Taken Out in 58 Cities for the calendar years 1932-37.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

Table 9 shows the values of the building permits issued by 35 cities in the years 1910-37. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers since 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910, as compiled by the Department of Labour, are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the depression years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the Great War.

¹ As reported by employers.² Not available.

The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 persons or over. The index of employment in building construction, calculated upon the 1926 average as 100, from data furnished by some 750 employers, averaged 60.1 in 1937, as compared with 55.4 in 1936. The 1937 figure was higher than in any other year since 1931.

Over the period 1911-36, inclusive, or since the beginning of MacLean's record of construction contracts awarded as shown in Table 6, p. 479, there has been an average annual per capita expenditure on construction of about \$30. The period covered includes, of course, the war years and the depression since 1930, as well as the booms of 1911-13 and 1926-30. This average, consequently, is not unreasonably high. For the present population, the annual total of construction, on the basis of this average, should amount to over \$330,000,000. Furthermore, there is undoubtedly an accumulated deficiency in construction from the recent years of sub-normal activity. Some idea may be gained, therefore, of the part which the normal functioning of the construction industry might play in the reduction of unemployment.

CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: value and quantum* of world trade (including Canada's position in world trade); historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

Section 1.—The Development of Tariffs.

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade which have influenced tariff development; and second, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has therefore been necessary to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce". Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the

* The term "quantum" is commonly used in international discussions of trade. For this reason it is retained in the analyses of international trade made here, although in line with the common practice in Canada, "volume" is used in the discussion of Canadian trade in Subsection 10.

merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland, and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia, and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in the United Kingdom had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

The Abolition of Preference and the Reciprocity Treaty of 1854.—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period, and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months

later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

Tariff Policy since Confederation.—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old Province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to 17½ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from 17½ p.c. to 20 p.c., the rates on cotton goods from 17½ p.c. to rates, specific and *ad valorem* equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and 17½ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards, but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour, and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This reciprocal tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India. Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the reciprocal tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis, and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the reciprocal tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga, and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and

Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of 33½ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

Subsection 2.—Tariff Relationships with Other Countries.*

Tariff relations between Canada and other countries are governed by: (1) application to Canada of some old commercial treaties of Great Britain; (2) participation in commercial treaties of Great Britain by Canadian Acts of Parliament; (3) Canadian Conventions of Commerce or Trade Agreements; (4) Exchange of Notes respecting reciprocal tariff concessions; (5) British preferential rates granted by the Tariff Act; (6) power of extending, by Orders in Council, British preferential or lower rates, intermediate rates, or other reduced duties as compensation for concessions received; (7) authority to impose a surtax on goods from a foreign country whose tariff discriminates against Canadian goods.

EMPIRE COUNTRIES.

Empire Preferences.—The Tariff Act assented to June 13, 1898, by which Canada replaced the Reciprocal Tariff of the year before by a purely British Preferential Tariff, specifically granted the benefit of the new preferential duties to the United Kingdom, Bermuda, British West Indies, and British Guiana. A provision whereby the benefit could be extended to any British possession whose tariff was equally favourable to Canada was at once invoked to give the preferences to British India, Ceylon, Straits Settlements, and New South Wales. In 1904 these preferences were extended to New Zealand, to the colonies now comprising the Union of South Africa, and to Southern Rhodesia, all of which, about that time, had granted newly introduced preferences to Canada. All these countries, except New South Wales, which had ceased to be a separate customs area, were named in the Tariff Act of Apr. 12, 1907 (still in force, in amended form), as being entitled to British preferential rates. The British preference margin, which had been increased in 1900 from one-quarter to one-third, remained at approximately one-third in the 1907 revision, but has since been much varied and enlarged. The 1907 Tariff contains three columns—British Preferential, Intermediate, and General. Sec. 4 of the Tariff Act empowers the Governor in Council to extend British preferential rates, intermediate rates in whole or in part, or most-favoured-foreign-nation treatment to any part of the Empire or British mandated territories.

British preference has been extended to many new areas under Sec. 4. (See p. 520 of the 1934-35 Year Book.) The past year witnessed its further extension (Order in Council Sept. 29, 1937) to Malta, Gilbert and Ellice Islands, British Solomon Islands Protectorate, Nauru, Papua, and Norfolk Island. The Intermediate Tariff was extended to Hong Kong as from Feb. 4, 1933. Orders in Council were passed which accorded most-favoured-foreign-nation treatment to the United Kingdom and the Union of South Africa on July 19, 1935; to Australia and New Zealand on Aug. 21, 1935; to the British West Indies on Oct. 20, 1936; to all the non-self-governing British colonies and protectorates, Palestine, Tanganyika territory, and the territories of Togoland and Cameroons under British Mandate on

* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

Sept. 29, 1937. Ireland is similarly favoured due to the fact that her Trade Agreement with Canada guarantees to her duties as low as apply to the United Kingdom.

Either by means of the Tariff Act or Trade Agreements with the United Kingdom, Ireland, Australia, New Zealand, Union of South Africa, and British West Indies, Canada now accords her British Preferential Tariff, or lower rates, to almost the whole Empire, including British protectorates and mandated territories. In addition, the products of the Newfoundland fisheries are declared by Sec. 8 of the Tariff Act to be free of customs duty until otherwise determined by Order in Council.

Reciprocal concessions in Empire markets are widespread. Nearly all Canadian products are given tariff preferences when entering Great Britain and Northern Ireland, Australia, New Zealand, British West Indies, Bermuda, British Guiana, British Honduras, Fiji, Southern Rhodesia, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, St. Helena, Western Samoa, British Protectorate of Tonga, British Solomon Islands, Gilbert and Ellice Islands, Cyprus, Channel Islands, and Isle of Man. To a considerable extent tariff preference is granted to Canadian goods in Ireland, Union of South Africa, Ceylon, Mauritius, and Malta; also, on some goods, in the Federated and Unfederated Malay States, British North Borneo, Sarawak, Brunei, and Cayman Islands. Empire motor cars enjoy preference in Hong Kong and the Straits Settlements; spirits, wines, malt liquors, and tobaccos in Gibraltar; and wines in the Falkland Islands.

United Kingdom.—Canada has granted to the United Kingdom her British Preferential Tariff since its inception in 1897. The United Kingdom, in 1919, introduced preferences for Canada and the rest of the Empire on the limited number of products then comprising her tariff. In subsequent years, with expansion of the tariff, Empire preferences in the United Kingdom extended to more commodities. (See pp. 521-522 of the 1934-35 Year Book.) The Import Duties Act, effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on all non-Empire goods not already dutiable or specifically exempted. On the report of an Advisory Committee created by the Act the general rate was increased within two months on many manufactured articles to 15, 20, 25, 30 or 33½ p.c. Less comprehensive Orders issued from time to time have made further increases or changes. The Act exempted products of the Colonial Empire altogether and exempted products of the Dominions, India, and Southern Rhodesia until Nov. 15, 1932. A Trade Agreement between Canada and the United Kingdom signed on Aug. 20, 1932, extended the period of exemption of Canadian goods (see p. 486 of the 1936 Year Book) for five years. The 1932 Agreement has been superseded by one signed Feb. 23, 1937, which renews exemption of Canadian goods from the Import Duties Act, or any other duties not already applicable, with the qualification, as in the previous Agreement, that the United Kingdom, after notification, may impose duty (preferential) on Canadian eggs, poultry, butter, cheese, and other milk products, or in consultation with the Canadian Government may regulate supplies. The United Kingdom grants specified preferences on Canadian wheat, copper, lead, zinc (conditional on Empire producers supplying the demand at world prices); butter, cheese, raw or canned apples, pears, eggs, processed milk, honey, fish, timber, asbestos, and patent leather. The preference margin on Canadian natural silk hosiery was increased, the rate on motor cars and parts stabilized, the duty on reed organs removed, and a fixed preference on tobacco assured until Aug. 19, 1942. Canada obtains the benefit of all British Preferential Tariffs in the Colonial Empire and also exchanges specific preferences with certain colonies. Canada concedes to the United Kingdom reduced duties under 179 tariff items, gives assurance of no upward revision of existing pref-

erential rates under 246 items, and, in the case of 91 items (mainly products of a class not made in Canada), undertakes that margins of preference will not be reduced. If any duty-free Canadian article is exported to the United Kingdom below fair market value in Canada, and the situation, after notification, not corrected, Canadian anti-dumping provisions are to be waived as regards similar United Kingdom goods. The Canadian Government, which is given a quota of 2,500,000 cwt. per annum of bacon and hams, undertakes to assist in the promotion of orderly marketing of these and other meats in the United Kingdom. Either country may suspend or modify scheduled concessions if it is established that, by means of the preference, any organization of exporters controls trade to the prejudice of consumers. Each Government agrees not to increase beyond 50 p.c. the Empire content required for preference in manufactured goods. The 1937 Agreement was approved by the Canadian Parliament on Mar. 31, 1937, implemented by the United Kingdom Budget of Apr. 20, 1937, and formally proclaimed in force from Sept. 1, 1937. It is to remain in force until Aug. 20, 1940, and afterwards until terminated on six months' notice.

Ireland.—Ireland at its inception in 1923 as the Irish Free State, granted Canada any preferential rates in force, and in return received the benefit of the British Preferential Tariff. A formal Trade Agreement between Canada and Ireland, signed Aug. 20, 1932, secured for all goods the produce and manufacture of Canada, the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce or manufacture of Ireland, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

Australia.—A Trade Agreement between Canada and Australia (superseding a 1925 arrangement of limited scope) was brought into force on Aug. 3, 1931. British Preferential Tariffs were exchanged, with some reservations by Australia, and some additional concessions by Canada. Enlarged margins of preference were also granted by each country on certain products of importance to the other. (See p. 484 of the 1936 Year Book.) The Agreement, which was obligatory for one year, has remained in force subject to six months' notice of denunciation by either Government. During the calendar year 1937 Canada's exports to Australia reached \$30,-500,000. Imports from Australia were \$12,000,000. In view of trade balances being so much in Canada's favour, the Australian Government intimated last year that if the Agreement was to continue, further Canadian concessions should be accorded Australian products. After negotiations, the Canadian duties on certain Australian goods were reduced by Order in Council effective Oct. 1, 1937, and the Trade Agreement was kept in force, subject, as before, to denunciation on six months' notice by either Government.

New Zealand.—Canada was granted the British preferential rates of the New Zealand Tariff established in 1903. Canada has extended her British Preferential Tariff to New Zealand since 1904. On Oct. 1, 1925, Canadian special rates then granted Australia were also extended to New Zealand, but withdrawn on Oct. 12, 1930. As from June 2, 1931, New Zealand cancelled nearly all her British preferential rates to Canada. On May 24, 1932, a new Trade Agreement was brought into force for one year (applicable also to Western Samoa and Cook Islands), whereby Canada granted New Zealand some rates lower than British preferential, and otherwise the British Preferential Tariff. New Zealand restored the British preferential rates to Canada except for 6 items upon which intermediate rates were conceded. A New Zealand surtax of 22½ p.c. of duty (in a few instances 5 p.c.) insti-

tuted on Aug. 18, 1930, was cancelled by a New Zealand tariff amendment of Nov. 19, 1932, as regards all Empire goods except those from Canada, Union of South Africa, Irish Free State, Newfoundland, and India. The 1932 Trade Agreement was made for one year, but has been kept in force by various renewals. It would have expired on Sept. 30, 1937, and, in order to secure a further renewal, New Zealand was granted certain reductions in Canadian duty including some being accorded to Australia. The Agreement was then renewed to Sept. 30, 1938, by Order in Council of Oct. 1, 1937. New Zealand, as from Mar. 1, 1938, increased some rates against Canada, Australia, and foreign countries on the ground that her manufacturing costs had increased.

Union of South Africa.—In addition to the British Preferential Tariff which Canada accords to the Union of South Africa under the Tariff Act of 1907, commerce with the Union of South Africa is governed by a Trade Agreement signed Aug. 20, 1932. It provides for exchange of preferential treatment on selected commodities. (See p. 487 of the 1936 Year Book.) By an Exchange of Notes (Union of South Africa dated Aug. 2, 1935; Canada dated Aug. 31, 1935) effective July 1, 1935, each Dominion assures the other of as low rates as apply to the goods of any foreign country.

Southern Rhodesia.—A Trade Agreement signed Aug. 20, 1932, exchanging preferences on a few selected commodities and each country's British Preferential Tariffs on nearly all other commodities, was terminated as from Jan. 2, 1938, on notice by Southern Rhodesia. Canadian goods are now accorded an Intermediate Tariff in Southern Rhodesia, and Canada, under the Tariff Act of 1907, applies her British Preferential Tariff to Southern Rhodesian goods.

British West Indies.—Under the Canadian Customs Tariff Act, 1907, the British Preferential Tariff applies to the British West Indies, Bermuda, and British Guiana, and by Order in Council effective Feb. 1, 1913, to British Honduras. Special tariff concessions were made to the British West Indies in a reciprocal Trade Agreement of 1912, enlarged in 1920. The latter was replaced on July 6, 1925, by an Agreement still more extensive and brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated, on a year's notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana, and British Honduras. (For further details see p. 484 of the 1936 Year Book.)

FOREIGN COUNTRIES.

The power given under Sec. 4 of the Tariff Act to extend the Intermediate Tariff, in whole or in part, by Order in Council, to British countries, applies equally to foreign countries. Another important means of arranging for reciprocal concessions from foreign countries is afforded by Sec. 11 of the Customs Tariff which authorizes the making by Order in Council of such reductions of duties on goods imported into Canada from any other country as may be deemed reasonable by way of compensation for concessions granted by any such country. On the other hand, power is given under Sec. 7 to impose a surtax of 33½ p.c. *ad valorem* on goods from any foreign country which treats imports from Canada less favourably than those from other countries.

Most-Favoured-Nation Treatment.—Mutual guarantee of most-favoured-foreign-nation treatment, or, as it is commonly called, most-favoured-nation treatment, enters into many of the tariff arrangements between Canada and foreign

countries. Usually, this means that Canada and the other contracting State agree that each party will accord to the goods of the other the benefit of the lowest duties applied to similar goods of any other foreign origin. There may be reservations. These reservations are likely to be tariff advantages, not relatively of far-reaching importance, such as one State may grant to another on historical, political, or geographical grounds, or some other special relationship. The concessions arising out of most-favoured-nation treatment under the Canadian tariff now consist of the rates of the Intermediate Tariff, and lower rates on some goods provided in Trade Agreements with France, the United States, and Poland. It will be seen that the guarantee by Canada of most-favoured-nation treatment to a foreign country does not entitle the foreign country to preferences existing only under the British Preferential Tariff or an Empire Trade Agreement. In other words, Empire preferences are confined within the Empire.

The benefit to Canadian exports of most-favoured-nation treatment in any country depends on the customs and treaty system of the particular importing country concerned. Several foreign nations have maximum and minimum schedules, meaning that there are two scales of duties for practically all goods imported. There may be also an intermediate scale of duties. Some countries maintain reduced duties only on specified items of their tariffs, which they have conceded in one or more commercial treaties. A country, too, may adhere strictly to a single-column tariff. Even when it makes concessions in a commercial treaty it may incorporate these in the normal tariff, thus discriminating against no country. The number of countries maintaining uniform tariffs regardless of the origin of goods, however, is becoming smaller from year to year. The benefit of most-favoured-nation treatment would, of course, depend also on the extent to which tariff favours apply to countries competing in the market in question. It has been the practice to include import restrictions when bargaining for most-favoured-nation treatment but the significance of this is greatly lessened in recent years by countries administering import quotas independently of most-favoured-nation commitments.

Argentina.—A Treaty of Amity, Commerce and Navigation between Great Britain and Argentina, signed Feb. 2, 1825, exchanging most-favoured-nation treatment is still applicable to the tariff relations between Canada and Argentina. Argentine customs duties, with minor exceptions, apply equally to imports from all countries. Extensive tariff reductions made in an Agreement of Sept. 26, 1933, with the United Kingdom, have been extended to imports from all countries.

Austria.—An Exchange of Notes, July 6-8, 1933, and Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, the latter for an indefinite period, granted the Canadian Intermediate Tariff in return for most-favoured-nation treatment in Austria. Many important items of the Austrian Tariff were subject to conventional or reduced rates of duty which applied to countries having such treaty relationship with Austria.

Belgium.—A Convention of Commerce between Canada and Belgium, signed July 3, 1924, provided for exchange of most-favoured-nation treatment of each other's goods. The Belgian Tariff consists of a Minimum Tariff and a Maximum Tariff (three times the minimum). The Minimum Tariff, however, is in practice applied equally to imports from all countries.

Bolivia.—Article 15 of the Treaty of Commerce of Aug. 1, 1911, between the United Kingdom and Bolivia, was accepted by Canadian Order in Council of July 20, 1935, the effect being an arrangement between Canada and Bolivia for exchange

of most-favoured-nation treatment of each other's goods. Customs duties in Bolivia are applied equally to imports from all countries.

Brazil.—On account of Brazilian policy to cancel old Trade Agreements, an arrangement was made between Canada and Brazil by Exchange of Notes, July 25-30, 1936, granting the Canadian Intermediate Tariff for the Brazilian Minimum or lowest tariff. This arrangement continued the former reciprocal relationship between the two countries. It was superseded by an Exchange of Notes of June 12, 1937, providing for the mutual concession of most-favoured-nation treatment in tariff matters. The Tariff of Brazil consists mainly of a Minimum Tariff and a General Tariff, approximately one-quarter higher. Some rates lower than the minimum, established by an Agreement of Feb. 2, 1935, with the United States, apply to imports from countries enjoying most-favoured-nation treatment.

Colombia.—A Treaty of Friendship, Commerce and Navigation between the United Kingdom and Colombia, signed Feb. 16, 1866, requires Colombia and Canada to give each other most-favoured-nation treatment in tariff matters. An Agreement between Colombia and the United States, signed Sept. 13, 1935, created many reduced Colombian duties, to which treaty countries became entitled. Otherwise Colombian duties apply equally to imports from all countries.

Costa Rica.—A Costa Rican law of Feb. 16, 1933, established a surcharge of 30 p.c. of the duty on imports from countries not granting most-favoured-nation treatment to Costa Rica. Reduced duties appeared in an Agreement with the United States signed Nov. 28, 1936. An Exchange of Notes of Mar. 1-2, 1933, with the United Kingdom, set forth that Costa Rica would extend most-favoured-nation rates to any part of the British Empire on a reciprocal basis. A Canadian Order in Council of July 20, 1935, extended most-favoured-nation treatment to Costa Rica, thus entitling Canadian goods to a reciprocal concession in Costa Rica.

Czechoslovakia.—A Convention of Commerce between Canada and Czechoslovakia of Mar. 15, 1928, exchanged most-favoured-nation treatment in tariff matters. Czechoslovakia has conventional or reduced duties on many goods.

Denmark.—Danish Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1, and July 11, 1670, establishing reciprocal most-favoured-nation treatment of each other's goods, still apply to the tariff relations between Canada and Denmark. Although Denmark has a single-tariff schedule, which is applicable to all countries, provision is made for penalty duties against countries which discriminate against her.

Estonia.—Article 28 of the United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926, providing means for a most-favoured-nation arrangement between Canada and Estonia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. The duties of the Estonian Minimum Tariff are half those of the General Tariff, while on some goods conventional rates lower than the Minimum Tariff exist.

Finland.—Article 23 of the United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923, providing means for exchange of most-favoured-nation treatment between Canada and Finland, was accepted by the Finland Trade Agreement Act of June 12, 1925. Finland has in force some conventional rates lower than her General Tariff.

France.—The Franco-Canadian Trade Agreement of 1922 having lapsed on June 16, 1932, negotiations for a new Agreement ensued and were concluded by the signing of a Trade Agreement on May 12, 1933. This Agreement was brought into

force as from June 10, 1933. Under its terms Canada was accorded the rates of the French Minimum Tariff and most-favoured-nation treatment on 185 items or parts of items and reductions varying from 17 p.c. to 73 p.c. of the General Tariff on 24 items or parts. The French General Tariff is, for most goods, four times the Minimum Tariff. Intermediate rates are expressed as varying percentage reductions from the General Tariff. In return Canada conceded to France a rate as low as British preferential on 7 items, reductions from the Intermediate Tariff of from 10 p.c. to 25 p.c. on 95 items and Intermediate Tariff rates on an extensive list of items. The French colonies are included within the scope of the Agreement. The Agreement was supplemented by a Protocol of Feb. 26, 1935, and Notes exchanged Mar. 20, 1936, and July 30, 1937, under which Canada secured the Minimum Tariff on 25 more items of the French Tariff, in return for adjustments of duty on some French products. These supplementary arrangements also made provision for quotas on many Canadian articles of which the import into France is subject to quantitative restrictions.

Germany.—In the absence of a commercial agreement, a 'Super Tariff' (*Obertariff*) created by a German law of Jan. 18, 1932, two to four times as high as the General Tariff, on goods affected, was invoked against Canada on Apr. 1, 1932. On account of negotiations that ensued, the Super Tariff was suspended on July 1, 1932, for six months. By Exchange of Notes effective Jan. 1, 1933, an Agreement, for the duration of three months, was entered into, giving Germany the Canadian Intermediate Tariff in return for its ordinary General Tariff and any existing conventional duties. This arrangement was renewed, first for nine months, and on Jan. 1, 1934, for an indefinite period, subject to termination on six months' notice. A Provisional Trade Agreement, including exchange of most-favoured-nation treatment, was signed on Oct. 22, 1936, to become effective fourteen days after exchange of ratifications, and to remain in force until Nov. 14, 1937, and thereafter until terminated on two months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. On account of the control exercised by Germany over exchange for payment of goods, a Payments Agreement was also entered into on Oct. 22, 1936. It authorized utilization of definite percentages of exchange accruing from German exports to Canada for purchase of Canadian wheat, apples, cheese, honey, fish, fox skins, asbestos, lumber, wood-pulp, sausage casings, and some other goods. Unallocated exchange is available for miscellaneous purchases. By Exchange of Notes on the day the Trade Agreement was signed, Canada agreed, on a basis of reciprocity, to give effect to the Trade Agreement as from Nov. 15, 1936, the Payments Agreement having gone into force on that day. The Exchange of Notes is to remain operative until replaced by the Provisional Trade Agreement or until terminated on six weeks' notice.

Guatemala.—A Guatemalan law of Jan. 25, 1936 (renewing with slight changes a surtax law of Jan. 26, 1935), provided for increasing by 100 p.c. the customs duties on goods from countries whose trade balances are adverse to Guatemala and who had increased their exports to Guatemala by 100 p.c. or more in 1935 as compared with 1934. A Trade Agreement between Canada and Guatemala signed Sept. 28, 1937, by exchange of most-favoured-nation treatment, exempted Canadian goods from the customs surcharge and entitled Canada to reduced duties provided for some items in a Guatemalan Agreement of Apr. 24, 1936, with the United States. Pending ratification of the Agreement, an Exchange of Notes on the same date established most-favoured-nation treatment reciprocally as from Oct. 14, 1937. An Act approving the Agreement was given third reading in the Canadian House of Commons on Apr. 26, 1938.

Haiti.—Haiti reduced duties on some United States products in a Trade Agreement of Mar. 28, 1935, and on Apr. 9, 1935, adopted a new Maximum Tariff (double the Minimum) which would have applied to Canada, only that by Exchange of Notes of June 10, 1935, renewed Apr. 6, 1936, and Apr. 15, 1937, Canada and Haiti exchanged most-favoured-nation treatment in tariff matters. A Canadian-Haiti Trade Agreement signed Apr. 23, 1937, includes this tariff arrangement and now (May, 1938) awaits exchange of ratifications. An Act approving the Agreement was given third reading in the Canadian House of Commons on Apr. 26, 1938.

Hungary.—Article 20 of the United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926, affording means for exchange of most-favoured-nation treatment in tariff matters between Canada and Hungary, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Hungary has in force various conventional rates lower than her General Tariff, resulting from treaties with other countries.

Italy.—A Convention of Commerce between Canada and Italy of Jan. 4, 1923, provided for exchange of most-favoured-nation treatment in tariff matters. The General Tariff of Italy is applicable to imports from all countries except where reduced rates for many goods have been established by commercial treaties.

Japan.—A Treaty of Commerce and Navigation between the United Kingdom and Japan on a most-favoured-nation basis signed April 3, 1911, was accepted by Canada (with minor provisos) in an Act of April 10, 1913. Certain surtaxes were imposed by Japan on July 20, 1935, and by Canada on Aug. 5, 1935, against each other's goods. An Exchange of Notes on Dec. 26, 1935, effected the removal of the surtaxes by both countries and stated the basis for Canadian customs valuations on Japanese goods. (See p. 489 of the 1936 Year Book.)

Latvia.—Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Latvia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Latvia has a minimum schedule of duties and a maximum schedule twice as high, as well as some rates of duty fixed by conventions with other countries.

Lithuania.—Article 4 of the United Kingdom-Lithuania Agreement of May 6, 1922, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Lithuania, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Lithuania has in force a Maximum Tariff on certain specified items double the ordinary Tariff. Resulting from treaties on a few items there are rates lower than the ordinary Tariff.

Netherlands.—A Canadian-Netherlands Convention of Commerce of July 11, 1924, provided for exchange of most-favoured-nation treatment in tariff matters between Canada, Netherlands, Netherlands India, Surinam, and Curaçao. The Netherlands Tariff consists of a single schedule of duties, without tariff preference to any country.

Norway.—A Convention of Commerce and Navigation between the United Kingdom and Norway (and Sweden) of Mar. 18, 1826, is applicable to British territories to the extent of still providing exchange of most-favoured-nation treatment in tariff matters between Canada and Norway. Norway has a single-tariff schedule but there exist provisions for imposing penalty duties on non-reciprocating countries.

Panama.—Article 12 of a United Kingdom-Panama Treaty of Commerce and Navigation, signed Sept. 25, 1928, affording means for reciprocal most-favoured-

nation relations with Panama, was accepted by Canadian Order in Council of July 20, 1935. A Canadian Order in Council of Dec. 29, 1936, conceded the Canadian Intermediate Tariff to the Panama Canal Zone. Duties in Panama apply equally to imports from all countries.

Poland.—A Convention of Commerce between Canada and Poland, signed July 3, 1935, effective Aug. 15, 1936, exchanged most-favoured-nation treatment and, as regards scheduled goods, granted reductions from the Canadian Intermediate Tariff and from the lowest Polish tariff. The Polish Tariff comprises two columns of rates for all goods, the rates of Column I being about 25 p.c. higher than the rates of Column II. On some goods there are conventional rates resulting from trade treaties which Poland has concluded with other countries and which are lower even than the rates of Column II. The Free City of Danzig was declared party to the Convention from Jan. 1, 1937.

Portugal.—Article 21 of the Treaty of Commerce and Navigation between the United Kingdom and Portugal, signed Aug. 12, 1914, providing for exchange of most-favoured-nation treatment in tariff matters, was accepted in the Canadian Trade Agreements Act of June 11, 1928. The Portuguese Tariff has maximum and minimum scales, the treaty arrangement securing the minimum for Canada.

Roumania.—Article 36 of the Treaty of Commerce and Navigation between the United Kingdom and Roumania of Aug. 6, 1930, affording means for exchange of most-favoured-nation treatment between Canada and Roumania, was utilized in an Exchange of Notes of Sept. 30, 1930. Roumania has a Minimum Tariff on some commodities, one-third lower than her General Tariff, also, as a result of treaties, reductions from the Minimum Tariff on certain goods.

Russia.—A Canadian Order in Council of Feb. 27, 1931, prohibiting importation from the Union of Soviet Socialist Republics of coal, wood-pulp, pulpwood, lumber, asbestos, and dressed furs, was cancelled, by an Order in Council of Sept. 10, 1936, in consequence of which the Soviet Union repealed an Order of Apr. 20, 1931, which had prevented her importing organizations and trade representatives from purchasing Canadian goods or chartering Canadian vessels.

Salvador.—By Exchange of Notes of Nov. 2, 1937, Canada and El Salvador granted each other most-favoured-nation treatment in tariff matters. The Tariff of El Salvador consists of a Maximum Tariff, a Minimum Tariff (one-third the maximum) and some conventional rates lower than the minimum.

Spain.—A Treaty of Commerce and Navigation between the United Kingdom and Spain, signed Oct. 31, 1922 (revised Apr. 5, 1927), providing for exchange of most-favoured-nation treatment in tariff matters, was accepted on behalf of Canada by the Spanish Treaty Act of June 11, 1928. The Tariff of Spain consists of a First (the highest) Tariff, a Second Tariff (usually one-third of the first) and some conventional rates lower than the Second.

Sweden.—A Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826, had the effect of establishing most-favoured-nation tariff relationship between Canada and Sweden. Sweden, in commercial treaties with various countries, has granted conventional rates of duty which, however, have been incorporated into the ordinary tariff and made applicable to all countries.

Switzerland.—Under the Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855,

Canada and Switzerland exchanged most-favoured-nation treatment of each other's goods. Switzerland has reduced some of her rates in treaties, but reductions are incorporated in a single-column tariff which applies to all countries.

United States.—A Trade Agreement between Canada and the United States was signed on Nov. 15, 1935. It exchanged unconditional most-favoured-nation treatment with reservation of Canada's Empire preferences and the United States preferences granted to Cuba, Philippine Islands, and the Panama Canal Zone. Further Canadian concessions to the United States included reductions in duty on 88 tariff items, modification of customs valuation, and reciprocating United States action in exempting from duty purchases up to \$100 made by returning Canadian residents. The United States schedule of reduced rates to Canada included: cattle (quota), cream (quota), seed potatoes (quota), clover and grass seeds, hay, turnips, maple sugar; certain classes of fish; lumber and timber (quota) previously subject to duty and excise; feldspar, talc, lime, various ferro-alloys, acetic acid, certain pulpboard, whisky, and patent and harness leather. Reductions on these goods are, with regard to 27 tariff items, 50 p.c.; 32 items, 25 to 49 p.c.; 8 items, reduction under 25 p.c. or existing rate confirmed. Among 21 items which were guaranteed continuance of duty-free entry were newsprint, wood-pulp and pulpwood, shingles (quota), and lobsters. Tariff reductions became operative on Jan. 1, 1936. The Agreement was approved by the Canadian Parliament on Apr. 8, 1936. Upon exchange of ratifications on May 14, 1936, the whole Agreement went into force. It continues subject to certain contingencies to Dec. 31, 1938, and thereafter until terminated on six months' notice. This Agreement was the seventh entered into by the President of the United States under an amendment to the Tariff Act of 1930, known as the Reciprocal Trade Agreements Act of June 12, 1934. Up to Mar. 7, 1938, ten others were signed, the reduced duties in each, except the one with Cuba, being accorded to Canada. The Trade Agreements Act was passed for only three years but on Mar. 1, 1937, was extended for a further three years.

Uruguay.—Canada signed an Agreement, on a most-favoured-nation basis, with Uruguay on Aug. 12, 1936, as regards customs duties, quotas, and allocation of exchange for commercial transactions, to come into force 30 days after exchange of ratifications, and to remain in force for three years and thereafter until termination on six months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. The Agreement awaits ratification by Uruguay. Notes were exchanged at the same time, effective at once, granting the Canadian Intermediate Tariff in return for Uruguayan trading facilities for Canadian exports, pending the coming into force of the formal Agreement. Provision exists under the tariff of Uruguay whereby duties may be increased by 50 p.c. on imports from countries which do not offer reciprocity, or do not accord most-favoured-nation treatment to Uruguayan goods.

Venezuela.—A Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of Apr. 18, 1825, applies to Canada and provides for exchange of most-favoured-nation treatment. The Venezuelan Executive Power is authorized to increase duties up to 100 p.c. on certain goods originating in a specified country, but it has not been learned that this power has been used. A limited number of reduced Venezuelan duties are provided in a Trade Agreement of Aug. 6, 1936, between France and Venezuela. Otherwise no preferences exist under the Venezuelan Tariff.

Yugoslavia.—Article 30 of the United Kingdom-Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927, (affording means for exchange

of most-favoured-nation treatment of each other's goods between Canada and Yugoslavia) was accepted by means of the Canadian Trade Agreements Act of June 11, 1928. The Yugoslavian Tariff comprises maximum, minimum, and conventional duties (usually incorporated in the minimum duties).

Section 2.—The Commercial Intelligence Service.*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets, and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

Organization at Ottawa.—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Metals and Chemical Products; Forest Products; and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

Organization Abroad.—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office, and cable address of the Trade Commissioner in each case is given below:—

CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list was revised as at Jan. 1, 1938. Cable address of Trade Commissioners is "Canada" unless otherwise stated.

<i>Argentine Republic</i> (Territory includes Uruguay).	J. A. Strong, B. Mitre 430, Buenos Aires (1).
<i>Australia</i> — Sydney (Territory covers Federal District of Cumberra, New South Wales, Queensland, Northern Territory and Dependencies.)	L. M. Cosgrave. Address for letters—P.O. Box No. 3052V. Office—City Mutual Life Building, Hunter and Bligh Streets.
Melbourne (Territory covers States of Victoria, South Australia, Western Australia, and Tasmania.)	Frederick Palmer. Address for letters—Box 196C, G.P.O. Office—Safe Deposit Office Building, Melbourne.
<i>Belgium</i>	Yves Lamontagne, Shell Building, 60 Ravenstein Street, Brussels.
<i>Brazil</i>	L. S. Glass. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Da "A Noite", Sala 802, Praça Maua.

* Revised by I. D. Wilgoss, Director, Commercial Intelligence Service, Department of Trade and Commerce.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—continued.

- British Malaya* (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra, Siam, and Netherlands Indies.)
- British West Indies*—
Trinidad (Territory includes Barbados, Windward and Leeward Islands and British Guiana.)
Jamaica (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras.)
- China*—
Shanghai (Territory includes North and Central China and Manchuria.)
- Cuba* (Territory includes Dominican Republic and Puerto Rico.)
- Egypt* (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria, and Roumania.)
- France* (Territory includes French Colonies in North Africa.)
- Germany* (Territory covers Germany—except the Rhine Valley—Czechoslovakia, Austria, Hungary, Poland, Lithuania, Latvia, and Estonia.)
- Hong Kong* (Territory includes South China, the Philippines, and Indo-China.)
- India and Ceylon*.....
- Irish Free State and Northern Ireland*.....
- Italy* (Territory includes Spain, Portugal, Gibraltar, Malta, Albania, and Jugoslavia.)
- Japan*—
Tokyo.....
- Kobe*.....
- Mexico* (Territory includes Guatemala, Honduras, and Salvador.)
- Netherlands* (Territory includes the Rhine Valley and Switzerland.)
- New Zealand* (Territory includes Fiji and Western Samoa.)
- Norway* (Territory includes Scandinavian countries and Finland.)
- Panama* (Territory includes the Canal Zone, Venezuela, Colombia, Nicaragua, and Costa Rica.)
- Peru* (Territory includes Bolivia, Chile, and Ecuador.)
- South Africa*—
Cape Town (Territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius, and Madagascar.)
- Johannesburg* (Territory includes Transvaal, Orange Free State, Bechuanaland, Somaliland, the Rhodesias, Portuguese East Africa, Mozambique, and Nyusaland.)
- United Kingdom*—
London.....
- London* (Territory covers Home Counties, South-eastern Counties, and East Anglia.)
- B. C. Butler, Union Building, Singapore, Straits Settlements.
- M. B. Palmer, Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
- F. W. Fraser, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.
- H. A. Scott, P.O. Box 264, Shanghai. Office—Ewo Building, 27 The Bund, Shanghai.
- C. S. Bissett, Address for letters—Apartado 1945, Havana. Office address—Royal Bank of Canada Building, Calle Aguirre 75, Havana.
- Henri Turcot, Address for letters—P.O. Box 1776, Cairo. Office—22 Shari Kasr el Nil, Cairo.
- Hercule Barré, Commercial Attaché, 3 rue Scribe, Paris (9). Cable address—Cansonnée.
- J. C. McGillivray, Mönckebergstrasse 31, Hamburg.
- V. E. Dinos, Address for letters—P.O. Box 89, Hong Kong. Office—Hong Kong and Shanghai Bank Building, Hong Kong.
- Paul Sykes, Address for letters—P.O. Box 2985, Calcutta. Office—23 Esplanade Mansions, Government Place East, Calcutta.
- James Cornack, 66 Upper O'Connell Street, Dublin, Irish Free State; and 44 Ana Street, Belfast, Northern Ireland. Cable address—Adanae.
- A. B. Muddiman, Via Manzoni Nr. 5, Milan (102).
- C. M. Croft, Commercial Secretary. Address for letters—P.O. Box 401, Tokyo Central. Office—Canadian Legation, 16 Omotecho, 3-chome, Akasaka, Tokyo.
- P. V. McLane, Address for letters—P.O. Box 230, Kobe. Office—309 Crescent Building, 72 Miyamachi.
- R. T. Young, Address for letters—Apartado Nam. 126-bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Nam. 30, Mexico City. Cable address—Cancuna.
- James Langley, Coolingsel 111b, Rotterdam.
- W. F. Ball, Address for letters—P.O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.
- Richard Grow, Address for letters—Stortingsgaten 29, Oslo.
- W. J. Riddiford, Address for letters—P.O. Box 222, Panama City. Office—Royal Bank of Canada Building, Santa Ana Plaza, Panama City.
- M. J. Veehler, Address for letters—Casilla 1212, Lima. Office—Portal de Belca No. 166, Plaza, San Martin, Lima.
- G. R. Heasman, Address for letters—P.O. Box 653, Cape Town. Office—Cleghorn and Harris Building, Adderley Street, Cape Town. Cable address—Cantacom.
- J. L. Mutter, Address for letters—P.O. Box 715, Office—Prudential Assurance Building, 92 Fox St., Johannesburg. Cable Address—Cantacom.
- Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W. 1. Cable Address—Sleighting, London.
- J. H. English, Canada House, Trafalgar Square, S.W. 1.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded.

United Kingdom—concluded.

London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium, and Germany.)

London.....

Liverpool (Territory covers North of England, Lincolnshire, North Midlands, and North Wales.)

Bristol (Territory covers West of England, South Wales, and South Midlands.)

Glasgow.....

United States—

New York City. (Territory includes Bermuda.)

W. B. Gornall, Fruit Trade Commissioner, Aldine House, Bedford Street, Strand, W.C. 2. Cable address—Canfrucum.

W. A. Wilson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address—Agrilcon.

H. R. Poussette, Martins Bank Building, 31 North John Street.

E. L. McColl, Northcliffe House, Colston Ave.

G. B. Johnson, 200 St. Vincent Street. Cable address—Cantracum.

D. S. Cole, British Empire Building, Rockefeller Centre, New York City. Cable address—Cantracum.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters, and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

Commercial Intelligence Journal.—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

Section 3.—Statistics of External Trade.*

For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind, as well as certain inaccuracies, only briefly mentioned below, which necessitate corresponding adjustments to external trade statistics if the true position of trade in relation to the total of Canada's international transactions is to be shown. These adjustments are treated more fully in the publications of the Dominion Bureau of Statistics dealing with Canada's Balance of International Payments.

Fiscal Years.—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption

* Revised by A. L. Neal, B.A., B.Sc. (Econ.), Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report on the Trade of Canada, the Condensed Preliminary Report on the Trade of Canada (annual), the Quarterly Report on the Trade of Canada, the Calendar Year Report on the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch, see Chapter XXIX, Section 1, under "External Trade".

in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Secs. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sec. 55 of the Customs Act and Orders in Council respecting currency valuations.) Inaccuracies arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminium extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

The recent period of disturbed currency relations between countries has introduced an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86½ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping

as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the £ has been above par, imports from the United Kingdom have been undervalued. Similar inaccuracies have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies, as in the case of imports from Japan.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in our imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34. The excise duty has been excluded from the valuation of such imports since April 1, 1935.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries (16.5 p.c. in 1937) is shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium, and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, and pp. 21 and 24 of the Condensed Preliminary Report on the Trade of Canada, 1937, both published by the Dominion Bureau of Statistics.

Exports of Gold in Trade Statistics.—Beginning in the tables of the 1937 Year Book, gold bullion exported from Canada as merchandise was included as a part of the total commodity exports and the statistics were revised accordingly back to 1926. Refined gold exported is considered merchandise when the export does not reduce domestic monetary reserves. When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as gold-bearing quartz, dust, etc., began to be exported in the form of bullion and until 1935 were recorded under coin and bullion as distinct from merchandise. In order to maintain comparability with the statistics of previous years, and also since Canada is a large gold-producing country and exports of gold are as much a part of national production as any other item, it was considered expedient to make the change indicated above. The gold exports have been valued since June 1, 1931, at the monthly average current market price. Since February, 1936, the Bank of Canada has been holding gold under

earmark for clients abroad and exports of Canadian gold are diminished by the amounts so held. Such earmarked holdings on Mar. 31, 1936, were 262,039.79 fine oz. and on Mar. 31, 1937, 1,555,836.579 fine oz.

Subsection 1.—Value and Quantum of World Trade.*

World imports and exports, on which the figures in Statement IV, p. 508, are based, are taken as the sum of the recorded imports and exports of individual countries reduced to the common monetary unit of United States old gold dollars (*i.e.*, gold valued at \$20.67 per fine ounce). On this basis the value of world trade increased by nearly 8 p.c. in 1936. The average prices in gold for goods entering into world trade rose (for the first time since 1925) by between 2 and 3 p.c. and the quantum of trade rose by about 5 p.c. (roughly as much as in 1935 and as the average for the years 1925-29) and reached a level 14 or 15 p.c. below that of 1929. The quantum of trade declined annually from 1929 to 1932 when it had reached a level about 25 p.c. below that of 1929. Since 1932, quantum has increased each year from only slightly in 1933 to probably the largest increase in 1936. As indicated above, average gold prices of goods comprising world trade had been declining since 1925. The annual declines were comparatively small until the end of 1929, became quite precipitous to 1932, and then tapered off to 1935, in which year they were only 42.5 p.c. of their level in 1929 or about 41 p.c. of that of 1927. The trend of gold prices turned upward in 1936. Later monthly reports of the League of Nations indicate that the trend in both quantum and prices was even more strongly upward during the early part of 1937 but levelled off in the latter part of year.

Trade by Groups of Commodities.—The commodities that enter into world trade may be roughly divided into three groups, namely, foodstuffs, raw materials, and manufactured goods. The gold prices of foodstuffs and of raw materials rose about 5 p.c. for each group in 1936, largely due to increases during the second half of the year; the prices of manufactured goods, on the other hand, appear not to have shared in the increase in prices, partly because of the devaluation of the currencies of several industrial countries in the autumn. The improvement, developing since 1932 in the barter terms of trade of agricultural and mineral-producing countries, therefore continued, although the terms of trade of these

* Abbreviated from "Review of World Trade, 1936", published by the League of Nations.

countries had deteriorated so rapidly during the early years of the depression that they still remained lower than in the years 1925-29. The quantum of foodstuffs entering into trade appears to have remained stable, so that the increase in the quantum of world trade in 1933 resulted entirely from increases in industrial raw materials and in manufactured goods.

The estimated movement since 1929 of average gold prices and quantum of commodities belonging to the three groups is shown in Statement I below. The estimates are based on information concerning the four principal trading countries representing about 40 p.c. of world trade. The average prices of raw materials fell further and more rapidly than either of the other groups. Prices of foodstuffs declined more slowly, but the decline continued longer and carried the price level almost as low as that of raw materials. Prices of both of these groups rose in 1936. Prices of manufactured goods declined still more slowly and not so far as for the other groups, but the average prices of manufactured goods for the year 1936 were still at the lowest level. The quantum movements of these groups were almost the reverse of their price movements. The quantum of trade in manufactured goods declined more rapidly and to a lower point than that of either of the other groups and, although it has been rising relatively more rapidly since 1932, it was still low in 1936. The quantum of raw materials did not decline so far and in 1936 was approaching the 1929 level again. The quantum of foodstuffs did not drop so far as either of the other groups, but the decline continued until 1934 and the rise since then has been small.

I.—PRICE AND QUANTUM MOVEMENTS OF GROUPS OF COMMODITIES IN WORLD TRADE, 1929 AND 1932-36.
(1929=100.)

Item.	1929.	1932.	1933.	1934.	1935.	1936.
PRICE MOVEMENT (in U.S.A. old gold dollars).						
Foodstuffs.....	100.0	52.0	45.5	41.5	40.5	42.5

Manufactured goods.....	100.0	64.0	56.0	50.0	48.0	48.0
All Commodities.....	100.0	52.5	46.5	43.5	42.5	43.5
QUANTUM MOVEMENT (1929=100).						
Foodstuffs.....	100.0	89.0	83.0	82.0	85.5	85.5
Materials, raw or partly manufactured...	100.0	81.5	87.5	88.0	91.5	95.5
Manufactured goods.....	100.0	69.0	60.5	66.5	69.5	75.5
All Commodities.....	100.0	74.5	75.5	78.0	82.0	85.5

Another significant analysis of world trade is derived from a rough division of commodities into capital goods and consumption goods. The former group includes wood and timber, ores, iron, steel, base metals, metal manufactures, machinery, instruments, and vehicles. The second group includes, besides ordinary articles of consumption and their raw materials, such goods as chemicals and coal. Capital goods represented 21.5 p.c. of the total gold value of world trade in 1929, 17.5 p.c. in 1932, and 22 p.c. in 1935, the remainder being consumption goods.

Gold prices of capital goods in 1935 were 46.5 p.c. of those in 1929, while prices of consumption goods in 1935 were only 40 p.c. of those in 1929. The quantum of capital goods in 1932 was 53 p.c. and in 1935, 74.5 p.c. of 1929, while the quantum of consumption goods were 79.5 p.c. and 85 p.c., respectively, of 1929. Thus

from 1932 to 1935 the rise in the quantum of capital goods amounted to about 40 p.c. as against only 7 p.c. for the latter. Yet, owing to the heavy contraction of trade in capital goods during the early depression years, the quantum of trade in such goods, calculated on a 1929 basis, still lagged behind that in other goods. Indications are that the trade in capital goods continued to increase more rapidly than that of other goods in 1936. The foregoing division between capital and other goods is, at best, a rough one. It is obvious that many goods of wood and metal, though semi-durable, are distinctly consumption goods. It is likely that the diverse tendencies indicated above would be even more pronounced if the division between the two categories could be made more accurately. The recent expansion in armaments throughout the world should be borne in mind in connection with trade in capital goods.

Geographic Distribution of World Trade.—In Statement II below, showing the percentage distribution of world trade by continents for the period 1929-36, the figures for each continental group are the sums of those of the individual countries comprising such group and therefore include trade between the members of the group. The United Kingdom and the United States have been separated from the remainder of their respective continental groups because trade tendencies in these two principal trading countries show movements differing from those of the remainder of their continental groups. Thus while the total trade of the United Kingdom has become an increased percentage of total world trade, that of the remainder of Europe has become considerably less. The trade of the United States has declined materially as a percentage of world trade, but that of the remainder of North America (chiefly Canada), after declining during the depression, was about the same percentage in 1936 as in 1929.

II.—PERCENTAGE DISTRIBUTION OF WORLD TRADE BY CONTINENTS, 1929, 1932, 1935, AND 1936.

(Basis: Recorded values in U.S.A. old gold dollars.)

The above analysis of trade by continental groups may be supplemented by analysing the trade of the principal political groups or empires, as in Statement III. As in the case of the preceding statement, the figures for each group are the sums of those of the individual countries comprising the group.

The share of the British Commonwealth (including colonies, protectorates, etc., as well as the Dominions) in world trade fell from 27.9 p.c. in 1929 to 26.7 p.c. in 1931, but has since increased to 29.8 p.c. in 1935 and 30.9 p.c. in 1936. The increase between 1935 and 1936 was due to the expansion in imports as well as exports, but, while the United Kingdom herself accounts for the bulk of the rise in the share of world imports, her share in world exports declined. The rise from 1932 to 1936 in

the share of the British Commonwealth in world trade contrasts sharply with the fall in that of the French and Netherlands Empires.

III.—PERCENTAGE DISTRIBUTION OF WORLD TRADE BY POLITICAL GROUPS, 1929, 1932, 1935, and 1936.

Rise of Discriminatory Measures in the Period 1928-32.—Changes in the geographical distribution of trade in the past decade have, to a great extent, been the result of commercial policy. Some ten years ago, there were relatively few exceptions to the rule that each country endeavoured to sell its products in the dearest market and buy the goods it required in the cheapest market; at present, price is in many countries no longer the only factor governing the direction of trade.

The change in commercial policy was due largely to the disturbances in the international accounts of numerous countries during the past decade and particularly to the heavy reduction in the supply of capital available to the principal debtor countries from the middle of 1928. The discontinuation of French capital exports on any considerable scale and the withdrawal of French short-term assets abroad, from the time when the franc was legally stabilized in June of that year, was an important and early factor in bringing about a change in the relationship between creditor and debtor countries. The decline in United States capital exports followed almost immediately upon that of the French, while British capital exports fell off in 1930.

The consequences of this change in capital movements can be only briefly outlined here. The redistribution of capital resources and the accompanying change in relative prices at first gave rise to a boom in certain creditor countries, while the chief debtor countries suffered from an inadequate supply of foreign means of payments; after the breakdown of the boom in 1929-30, the economic situation of these countries rapidly grew worse, their gold and currency resources were reduced as well as the prices of primary products, their terms of trade deteriorated, while their charges in the form of interest and amortization remained fixed. The terms of trade of the industrial creditor countries, as well as of Germany, improved, but the general price fall that occurred did not spare the economy of any country.

During the early part of the depression both debtor and creditor countries endeavoured to protect their economies against disturbances in their international accounts by new import barriers, but those raised by creditor countries were of particular importance as they directly impeded the adjustment of trade balances to the balances of capital transactions. A particularly disturbing example was the

reduction in the outlet for foreign goods in the United States after the adoption in 1930 of the Hawley-Smoot Tariff, by which nearly nine hundred duties were raised.

The connection between commercial policy and international capital movements became more pronounced during the financial crisis of 1931. The withdrawal of a portion of the large amounts of short-term capital invested in Central Europe, particularly in Germany, by various creditor countries, transferred by means of merchandise imports into the United Kingdom, where most goods could still be imported without hindrance and whence the transfer (for example, in the form of gold) did not meet with any difficulties, appeared to have been one of the principal causes of the depreciation of sterling, which was followed by the introduction in the United Kingdom of customs duties for various industrial products under the "Abnormal Importations Act" later in the year.

The contraction of British imports from industrial countries played an outstanding part in the events that followed, because it was by means of these imports that the transfer to the United Kingdom was effected of the bulk of the British income from abroad on account of the interest and dividends earned for services performed. With the smaller scope for such transfer, the financial position of various debtor countries deteriorated and several of them defaulted on their debts; in addition, a considerable scarcity of foreign currency occurred in various countries of Central Europe that had been accustomed to dispose of a large share of their exports in the United Kingdom or in other countries specializing in the British market, and had financed their purchases of primary products by their excess of exports in this trade.

The discriminatory treatment which before 1931 existed in international trade was limited by recognition of the fact that, in the long run, a country preventing its importers from buying in the cheapest market injured its own economy. Such considerations were to a large extent put aside after the financial crisis, when each country felt the economic strain to which it was exposed as a temporary disturbance originating abroad. The changes in prices were too rapid and too great to permit of a smooth adaptation of the domestic economy to the new competitive position, and the protection of that economy against breakdown appeared more important than the exchange of goods with foreign countries. The reinforcement of protective policies that followed had, in practice, always a discriminatory effect, as it chiefly affected trade with industrial or food-producing countries; but measures which were even in form discriminatory were also adopted on a scale that would have been unthinkable a few years earlier. Within a short time, a partially new technique for regulating merchandise trade as well as other international transactions developed. Its main instruments were, in creditor countries, quantitative restrictions of imports and, in debtor countries, exchange control; the latter, which was frequently combined with debt *moratoria*, gave rise to clearing for payments agreements and variable export subventions, and contributed to the tendency towards the balancing of bilateral transactions. All these measures are clearly discriminatory in substance, if not in form. In the case of clearing agreements, the discriminatory effect lies in the inducement they afford to the country whose balance in clearing is active to prevent the formation of frozen assets abroad by increasing imports from the partner, even if the additional imports have to be paid for at higher prices than those prevailing elsewhere.

It is not possible to indicate in detail how these measures have affected the distribution of trade, but attention may be drawn to the tendency for an increased proportion of trade to develop within certain more or less well-defined groups of

countries. The world empires are an example of such groupings and especially in the case of the British Commonwealth, trade between members of the group represents an increased proportion of the total trade of the group. Another grouping consists of debtor countries with weak currencies and, among such countries, mutual clearing agreements have resulted in the trade between them becoming a much greater proportion of their total trade. This change in distribution was determined, not by prices prevailing in the import and export markets concerned, but by discrimination rendered possible by commercial policy.

Recent Factors.—In spite of the restraints upon trade outlined above, the increase in prices of primary products since 1935 and the readiness with which such products were absorbed by free currency countries were of distinct benefit even to those raw-material-producing countries exercising exchange control and there were some signs of a return of trade into more normal channels.

If comparison is made between the import figures for 1935 and 1936, it is found that the greatest increases are recorded by industrial countries. The United Kingdom and the United States alone account for almost half of the total world increase in imports and other industrial countries for another fourth. The remaining countries, which mainly export foodstuffs and raw materials and represent one-half of world imports, thus account for only one-fourth of the increase in world imports. Of the increase in the value of world exports, however, industrial countries account for only about one-third and agricultural or mining countries for the remaining two-thirds. Germany was an exception to this general trend of industrial countries, for her exports increased more than her imports, but Germany, unlike the other principal industrial countries, is a debtor country.

The principal creditor countries—the United Kingdom, the United States, and France—increased their shares in world imports but their shares in world exports were reduced. The shares of debtor countries—Germany, and the majority of non-industrial countries—in world imports and exports moved in the opposite direction.

The circumstances determining trade movements differ from country to country. The progress of internal recovery from the depression in a number of countries, especially the United Kingdom and United States, with the consequent increase of imports of these countries, was a potent factor in the further recovery of world trade. Drought in the United States and labour disputes in that country and France tended to cut down the exports of those countries. The trade of several countries around the Mediterranean was adversely affected by unfavourable climatic conditions and political disturbances. The trade of countries of the former gold bloc—especially France, Netherlands, and Switzerland—was adversely affected by the depressed conditions within these countries before they readjusted their currencies in the autumn of 1936.

Canada's Position in World Trade.—The foregoing brief outline of the course of world trade in the period since 1929, taken from the League of Nations' reports, is presented as a background against which Canada's position in world trade may be viewed. According to these figures, Canada, in 1936, stood eighth in imports, fourth in exports, and fifth in total trade, whereas in 1929 she was fifth in each category. The position of fourth in exports in 1936 was largely due to the decline in exports of France, a decline which may be temporary. During the declining phase of the depression from 1929 to 1932, Canada's share in total world trade declined from 3.68 p.c. to 3.24 p.c. due to a great decline in the share of imports more than offsetting a slight increase in the share of exports. In the

recovery phase of the depression since 1932, Canada's share in total world trade has increased to 3.8 in 1936. The share of imports was still very low although it has recovered considerably since a low point of 2.3 p.c. in 1933. Canada's share of exports has been well maintained and, with increases since 1932, is now considerably larger than in 1929. The position is shown in the first section of Statement IV below.

The section of Statement IV showing the index of gold prices is significant as an indication of changes in the barter terms of trade for the countries shown. Generally speaking, terms of trade improved for industrial countries and deteriorated for raw-material countries from 1929 to 1932. Japan and the Union of South Africa were notable exceptions in each class. Since 1932 the movement of prices has been somewhat the reverse, although the maladjustments of 1932 were still not entirely compensated in 1936. Canada, as a country whose imports are chiefly manufactured goods and whose exports are chiefly primary materials, experienced a greater decline from 1927 to 1932 in the average price of exports which dropped to 45.1 p.c. of the 1927 level, than of imports which were 50.8 p.c. Since 1932, although the further decline in import prices has been a little larger than that of export prices, the import prices still averaged higher in 1936 at 41.4 p.c. compared to 39.6 p.c. for exports. In this comparison it should be borne in mind that Canadian exports in the statement include domestic gold, so that the remainder of Canadian exports are under still poorer barter terms than the figures indicate.

The quantum of Canadian imports has been recovering since 1932, but in 1936 it was still only 86.6 p.c. of that of 1927, was still more below that of 1929, and was below the estimated average for the world which stood at 92.4 p.c. of 1927. The quantum of Canadian exports has likewise been recovering since 1932 and made a remarkable gain in 1936 reaching a level above those of 1927 and 1929, and above the world average in 1936.

IV.—PERCENTAGE, PRICE, AND QUANTUM OF TRADE OF TWENTY-TWO LEADING COUNTRIES OF THE WORLD, CALENDAR YEARS 1929, 1932, 1935, AND 1936.

NOTE.—Basis: Recorded values of merchandise trade converted to U.S.A. old gold dollars. Price indexes are on the basis of U.S.A. old gold dollars. The year 1927 is taken as the base for both price and quantum indexes.

¹ Includes exports of gold produced within the country.² Imports are adjusted for over- or under-valuation (see p. 599).³ Including improvement and repair trade beginning 1933.⁴ Totals include other countries not specified.⁵ Indexes were not published in the Review of World Trade.⁶ Estimated from preliminary Canadian sources.⁷ Indexes based on year 1923.⁸ Excluding Manchuria since July 1, 1932.

Subsection 2.—Historical Statistics of Canadian Trade.

The most important features of Canadian trade are reviewed historically since Confederation, in most cases, in the first nine main tables of this chapter (pp. 528-535).

A general view of the trade of Canada in the fiscal years from 1868 to 1937 is furnished in Table 1 (p. 528), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some

difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 17 years, re-exports of foreign products from bonded warehouses have not been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. Since that time, however, there has been an annual excess of exports except in the fiscal years ended 1921, 1930, and 1931, when there were heavy return movements of funds to Canada in the form of an excess of imports.

The values of coin and bullion imported and exported are shown in Table 3 (p. 530). Exports of non-monetary gold bullion are not included in this table (see p. 501).

The figures of Tables 5 and 6 (pp. 532-533) show the overwhelming predominance of the two English-speaking countries in Canada's foreign trade; in the year ended Mar. 31, 1937, for example, 79.4 p.c. of the Dominion's exports of domestic produce was shipped to these two countries, which, in the same year, together provided 77.9 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years, the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1937. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 58-59 of the Condensed Preliminary Report on the Trade of Canada, 1936, and at pp. 509-510 of the 1937 Year Book.

Subsection 3.—General Analysis of Current Import and Export Trade.

The figures of Statement V, p. 511, indicate the seriousness of the decline in trade during the depression shown by the figures for the fiscal year 1933, and the extent of the recovery since then. That the decline in the quantum or volume of trade was not so great as that of the values here shown is evident from the analyses in Subsections 1 and 10 of this chapter. The recovery from the low point of the depression has been greater in exports than in imports.

Imports are an indication of purchasing power in Canada and are especially influenced by the expansion or contraction of capital expenditures within Canada.

The increase, therefore, of 16.9 p.c. in the volume and 19.5 p.c. in the value of imports reflects a recovery in purchasing power in Canada and probably some slight expansion in capital expenditures which were almost completely suspended during the worst years of the depression. It may be noted in Statement V that imports of iron and non-ferrous metal products, the groups chiefly influenced by capital expenditures, were much higher in 1937 than in 1933, though still much below those of the fiscal year 1927, chosen because it approximates to the calendar year 1926 taken as a representative year of the post-war prosperity period. Similarly in 1936 and 1937 imports have increased from the United States which is the chief external source for machinery and other durable goods and materials.

Exports represent the sale in world markets of surplus products of Canadian farms, mines, forests, fisheries, and factories and, when there is a ready sale for such products at prices profitable to the producer, large exports result in prosperity in Canada. In the year 1937 exports increased in volume by 16.8 p.c., while higher prices accounted for an increase of about 8.2 p.c. in the value of exports, so that Canadian goods were sold abroad not only in larger volume but also at more profitable prices. (See Subsection 10, pp. 582-585, for a comparison of volume and value.) The figures of exports shown in Statement V indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period, 1925-29, Canadian exports were predominantly agricultural. Indeed, in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of our exports, while non-ferrous metals constituted only 6.4 p.c. In 1937, on the other hand, vegetable and animal products made up only 45 p.c. of exports, but non-ferrous metals (including gold) increased to 22 p.c. This is very suggestive of the part which the mining and exporting of non-ferrous metals (including gold) are playing in the current economic recovery of Canada.

Statistical Tables of Current Trade.—Tables 10 to 18 (pp. 536-577) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States, and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important commodities. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1933-37. Table 15 shows imports and exports for the fiscal year ended 1937 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential, and treaty rate tariffs in 1937.

Subsection 4.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending Canada capital on a considerable scale for those times, supplied more than half her imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for Canada's exports, holding

that position steadily from 1890 to 1920, while in certain of the more recent years the United States again has been Canada's largest customer.

As regards imports, on the other hand, the United States, though in the beginning ranking second in supplying Canada's wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82.3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined and was 58.6 p.c. in 1937. Imports from the United Kingdom, which fell as low as 8.0 p.c. of the total in 1919, fluctuated between 15.2 p.c. and 19.0 p.c. between 1921 and 1930, but have been somewhat higher since then and stood at 19.3 p.c. in 1937. (See Tables 5 and 6 of this chapter.)

Statement V, p. 512, shows Canada's trade with the United Kingdom in three recent years compared with that in 1927 and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral, and chemical products. Vegetable and animal products continue to make up the major part of exports to the United Kingdom, but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

Trade of Canada with the British Empire.—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to on p. 490.

Average Rates of Duty under the British Preference.—Table 18 on p. 577 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. An analysis of the extent of the preference on British goods was given on p. 509 of the 1937 Year Book. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. After these logical adjustments the average rate of duty on imports from the United Kingdom has been lower in every year since 1922 while the difference in favour of the United Kingdom has become 50 p.c. or more in recent years.

The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward

trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown an upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products, while imports from those Empire countries are chiefly raw materials.

In the interpretation of statistics covering a long period, such as those in Statement VI following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which came the serious decline which accompanied the depression. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as follows:—

VI.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

Item and Fiscal Year.	Canadian Trade with—			Percentage of Total Trade with—

¹ Revised since the publication of the 1937 Year Book.

Subsection 5.—Trade with the United States and Other Foreign Countries.

Trade with the United States.—In the period immediately following Confederation, the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, Canada bought more from the United Kingdom than from the United States. (See Tables 5 and 6 for a record of trade with the United States since 1868.)

In the '70's, however, the proportion of Canadian exports to the United States, which had been over 50 p.c. in the first few years of Confederation, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years. Since the War, the average has been about 40 p.c., although in 1934 under the influence of the depression and high tariffs in the United States the proportion dropped to 33 p.c. (See Statement VII, p. 516).

Imports from the United States exceeded half of total Canadian imports for the first time in the years from 1877 to 1879, while in the 1880's they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the 1920's stood at about two-thirds of the total. They declined to less than three-fifths of the total since 1932 as shown in Statement VII, p. 516. The reduced demand for capital goods was an important factor in the depression years.

The commodities of Canadian export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for three recent fiscal years compared with 1927 and 1914 is shown in Statement V, p. 512. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products became again in 1935 the most important group and there are still large imports of textiles which include raw cotton, and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Aside from the effects of the Ottawa Agreements with their purpose of increasing intra-Empire trade and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States' share in imports into Canada which should not be overlooked is the influence of capital expenditures here. The United States is the principal external source for machinery, equipment, and structural materials. The almost complete cessation of capital expenditures in the depression therefore affected imports from the United States more than from any other country.

Another important factor influencing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States. These were seriously curtailed by the very high rates on many important Canadian products introduced by the Hawley-Smoot Tariff of June, 1930, and thereafter imports from the United States showed a greater decline than Canadian exports to that country. (See the 1936 Year Book, p. 508.)

However, this situation was relieved by the Trade Agreement with the United States which became effective on Jan. 1, 1936. The influence of the economic recovery in both Canada and the United States should not be overlooked as a factor in the recent increases of trade. The Trade Agreement has undoubtedly been of great benefit to producers of live stock and lumber in Canada and, in a less degree, to many other classes.

Canadian Trade via the United States.—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1937 imports *via* the United States have decreased from 9.5 p.c. to 2.8 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages by fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4; 1935, 17.3; 1936, 18.4; 1937, 16.5. An important factor in the decline for recent years has been the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain. Details by countries are given in Table 21 of this chapter.

Trade with Other Foreign Countries.—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1937 are shown in Statement VII below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries increased from 4.5 p.c. to as high as 24.0 p.c. in 1929; they declined to 12.3 p.c. in 1937.

¹Revised since the publication of the 1937 Year Book.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 14 to 45 (pp. 91-131) of the Condensed Preliminary Report on the Trade of Canada, 1937, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1936 and 1937.

Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.

Canadian Trade by Continents, 1937.—A summary of the imports and exports of Canada by continents is given in Statement VIII, p. 518. The part of the table showing percentages is of particular interest as indicating trends in the distribution of trade. Africa was the only division from which imports during the latest year declined in actual value, largely due to a decline in purchases of corn from British South Africa. A great increase in imports of corn from Argentina and increased imports of crude oil from other South American countries chiefly accounted for the increased share of imports from that continent. The progress of recovery in Canada tended to increase imports of durable and capital goods and industrial materials to a greater extent than imports of finished consumption goods and foods. Thus there was a rise in the share of imports from the United States (iron and other metal goods and industrial materials), Asia (rubber and tin from the East Indies), and Oceania (wool, hides, and sugar from Australia, New Zealand, and Fiji), while imports of manufactured consumption goods from Europe and foods from "Other North America" remained relatively stable and therefore the share in imports from those divisions declined. An increased demand with higher prices for grains, timber, and non-ferrous metals, raised the share of exports going to Europe in the latest year. Over the longer term since 1932, however, the restrictive measures regarding trade adopted by many European countries has reduced the share of "Other Europe" in both the imports and exports of Canada.

Imports from Principal Countries.—Statement IX which follows shows how predominant are the two great English-speaking countries as the source of supply of Canadian imports. Trade with these two leading countries is more fully covered in Subsections 4 and 5 of this chapter. During the fiscal year 1937, there were short crops of corn in the United States and British South Africa, with the result that imports of corn from Argentina were unusually heavy. Consequently, the position of third for Argentina may be only temporary, while British South Africa declined from ninth to twenty-ninth place. The percentage of imports from countries from which Canada obtains important industrial materials is tending to rise with the progress of recovery in Canada. Imports during the latest year from France were seriously affected by labour disputes and a high internal price level in that country before the franc was devalued. In Table 19 of this chapter may be found the values of imports from all important countries in recent years.

Exports to Principal Countries.—Percentages in Statement X, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as customers of Canada. Similarity of tastes and standards of living, as well as favourable tariff arrangements, are considerable factors in expanding exports of Canadian industrial products to the other British dominions. The industrial countries of Europe, especially those with liberal trade policies, are an important market for Canadian foodstuffs and non-ferrous metals. In the Orient, Japan has become largely industrialized and offers a growing market for Canadian foodstuffs, forest products (especially pulp and paper), non-ferrous metals, and other minerals. Table 20 of this chapter gives actual values of Canadian exports to all important British and foreign countries for the latest five fiscal years.

Subsection 7.—Principal Commodities Imported and Exported.

The commodities which make up Canada's external trade are shown in detail for the four latest fiscal years in Tables 12, dealing with exports, and 13, with imports, beginning on p. 538 and p. 550, respectively.

Canada's Principal Imports.—Statement XI, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930, and 1937. In the interpretation of the trends in imports, shown in this statement, the effects of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 95.6 in 1929, and 74.6 in 1936, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1937. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1937 the effects of the depression and price decline were still being felt, although there was a distinct improvement as compared with the low figures of 1933.

During the period of 47 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports, such as crude petroleum, automobiles and parts, artificial silk, electrical apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products, and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery, and fruits, which still remain among the chief items of imports owing to the absence of coal and high-grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century, many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9, p. 535.

Among the factors affecting short-term fluctuations of imports, in distinction from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of prosperous business activity capital expenditures are high as are also expenditures upon luxuries. It is, therefore, an indication of returning prosperity in Canada to find imports of machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., recovering something of the relative importance among imports which they held for a few years up to 1930.
